

particularly well suited for use in deepwater and harsh environments. DRIL-QUIP also provides liner hangers, downhole tools and safety valves. In addition, the Company provides advisory services, reconditioning services and running tools for use in connection with the installation and retrieval of its products.

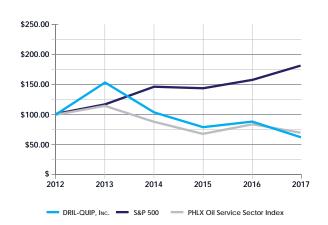

Headquartered in Houston, Texas, DRIL-QUIP has major manufacturing facilities in the United States, Brazil, Scotland and Singapore. The Company also has sales and service office in numerous locations throughout the world. DRIL-QUIP's manufacturing operations are vertically integrated, with the Company performing essentially all of its forging, heat treating, machining, fabrication, inspection, assembly and testing processes at its own facilities.

Forward-Looking Statements

Statements contained in this Annual Report relating to future operations, financial results and business plans are forward-looking statements that are based upon certain assumptions and analysis made by the management of the Company in light of its experience and perception of historical trends, current conditions, expected developments and other factors. These statements are subject to risks beyond the Company's control, including the factors detailed in the Company's Annual Report on Form 10-K enclosed herewith. Investors are cautioned that any such statements are not guarantees of future performance and actual outcomes may vary materially from those indicated. Forward-looking statements speak only as of the date they are made, and the Company assumes no obligation to update such information.

Total Stockholder Return

The adjacent performance graph compares the cumulative total stockholder return on our common stock to the cumulative total return on the Standard & Poor's 500 Stock Index and the PHLX Oil Service Sector Index over the period from December 31, 2012 to December 31, 2017. The graph assumes that \$100 was invested on December 31, 2012 in our common stock and in each of the other indices with all dividends, if any, reinvested.

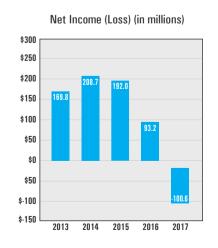

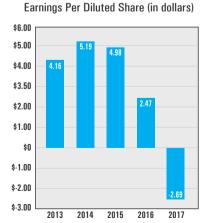

Financial Results

(In thousands, except per share data)				
Statement of Operations Data: (Years ended December 31)	2017	2016	2015	2014
Revenues	\$455,469	\$538,731	\$844,310	\$930,957
Operating income (loss)	(69,136)	112,859	248,835	278,748

\$1,200 \$1,000 \$800 \$600 \$400 \$200 2013 2014 2015 2016 2017

Our 2017 financial results were negatively impacted by impairment, restructuring and severance charges of \$66 million and one-time tax provisions of \$67 million, largely as a result of the US Tax Reform. 2016 financial results were negatively impacted by restructuring and severance charges of \$5 million.

Blake DeBerry
President and Chief Executive Officer

"...We remain very optimistic about our future and are starting to see some positive signs in our markets."

2017 was another challenging year for DRIL-QUIP. Our customers continued to limit activity due to the price of oil which, by the end of 2017, was down approximately 44% from its peak in the last five years. DRIL-QUIP's customers again substantially deceased their capital spending in 2017 for drilling and production equipment. The working floating rig count also fell approximately 13% during 2017. Accordingly, the Company's backlog and revenue continued to decline.

As a result of our decline in revenue, we made very difficult decisions to right-size our Company to the level of activity during the downturn, including personnel reductions, salary rollbacks and asset rationalization around the world. We expect to fully integrate the TIW acquisition by the end of 2018, which should yield approximately \$10 million in annual savings.

Despite this challenging environment, we remain very optimistic about our future and are starting to see some positive signs in our markets. U.S. oil storage levels have declined significantly since mid-2017 to more normal levels. Industry analysts suggest that supply and demand will come closer into balance within the next 18 months. With those dynamics trending more positively, we are starting to see an uptick in customer tender activity and expect our customers will become more active during 2018. Assuming oil prices remain stable at \$55 - \$65 per barrel, we believe we are at a revenue trough and will build backlog in 2018.

LETTER TO STOCKHOLDERS (continued)

We are optimistic about the long-term fundamentals of the offshore market due to the following -

- Driven by population growth and a higher standard of living in developing countries, the demand for hydrocarbon-based energy is expected to continue to grow.
- The sizeable oil energy reserves that exist offshore are attractive to large operators seeking to meet long-term demand.
- Improvements in offshore exploration and production technology and structural cost reductions are anticipated to make offshore drilling and production more economical for operators to pursue.

Although we believe in the long-term fundamentals of the offshore sector, the number of wells drilled may not recover to pre-downturn levels. We continue to focus on positioning the Company to increase not only its market share but also its total available market resulting in more revenue per well. Our efforts are focused on internal research and development and on acquisitions that augment or improve our product offerings.

Throughout the downturn, we remained steadfast in our commitment to research and development. In 2017, we completed testing of promising new products, including our BigBore IIe™ Subsea Wellhead System and DXe™ Wellhead Connector. Both products were honored with a Spotlight on New Technology award at the Offshore Technology Conference, and we have licensed one of our major competitors to machine the DXe profile on their products. This is a significant step towards recognition and acceptance of this product in the industry. The BigBore IIe™ Subsea Wellhead System will reduce the number of trips into the wellbore for the driller and is part of our strategy of providing products to the offshore industry that structurally change the way wells are drilled offshore, providing permanent cost savings for operators.

Our acquisitions of TIW Corporation (TIW) and Oilpatch Technologies (OPT) have expanded both our product offerings and our geographical footprint. As an example, we recently announced a large contract award to supply top tensioned riser systems for a project located offshore Vietnam that included technologies that were enhanced by our acquisition of Oilpatch Technologies.

OUR SOCIAL RESPONSIBILITIES

We continue to seek ways to better DRIL-QUIP as a corporate citizen. When many of our Houston employees suffered damage and hardship from Hurricane Harvey, the response and willingness of DRIL-QUIP employees to help one another was overwhelming. We used social media to organize a way for our employees to connect with one another, and provided a week of paid "recovery time" for them to assist the community in rescue and recovery operations.

6 DRIL-QUIP 2017 Annual Report

Finally, we created the DRIL-QUIP Employee Assistance Fund with a corporate contribution of \$200,000 and with additional contributions from DRIL-QUIP employees worldwide. To date, these contributions have provided 95 DRIL-QUIP families with tax-free financial assistance grants totaling over \$160,000. This fund was set up to assist DRIL-QUIP employees worldwide who experience catastrophic loss and will continue to exist for future events. I express my heartfelt thanks for the support the DRIL-QUIP community provided to those in need.

We have long been committed to the safety of our employees and the protection of our environment. Since 2013 all of our major manufacturing facilities have been certified to the ISO 14001 environmental standard and the OHSAS 18001 Health and Safety standard. We continue to improve our Health, Safety, and Environment processes to enhance the safety of our employees and to minimize any environmental impacts of our business. In our commitment to safety, our senior managers regularly perform safety walk-throughs at our facilities to reinforce our focus on working in a safe manner.

Our four main manufacturing facilities are also certified as compliant with the ISO 9001 standards for quality management systems designed to help ensure our products consistently meet customer and regulatory requirements. We have also successfully implemented advanced product quality planning (APQP) procedures and techniques that improved our up-front quality planning in the design and manufacturing of many of our products.

BUILDING FOR THE FUTURE

We completed R&D testing of our new HorizontalBore Subsea Tree components. Developing and supplying a superior horizontal subsea tree to the industry is critical to rounding out our subsea completion system product line. We believe our HorizontalBore Tree will support our strategy by increasing the available markets for DRIL-QUIP. We completed qualification testing of an automated "hands-free marine riser system". Branded the HFRe™ riser system, this product reduces the number of rig personnel required to make-up and run the riser and saves about eight hours of installation time on a well drilled in 10,000 feet of water. Additionally, this riser system provides capability for data acquisition to track critical data for each riser joint, allowing the rig contractor to make better decisions relating to maintenance and reconditioning. These step changes in technology are unique to the industry and will produce substantial cost savings for our customers. We believe the HFRe™ riser system represents a new performance standard in the industry compared to current technology.

Western Hemisphere

In Houston, our Manufacturing
Department commenced delivery of
Dry Tree production systems to the
Chevron BigFoot floating production

platform located in 5,200' in the Gulf of Mexico. This equipment is specially designed for the high-pressure, high-temperature deep well environment associated with this deep water development.

The Sales Department had numerous successes despite extremely challenging market conditions. A large subsea wellhead order was booked with BP that covers 100% of its worldwide subsea wellhead requirements. Orders were obtained for tubulars and specialty connectors from a number of new customers, which we believe resulted

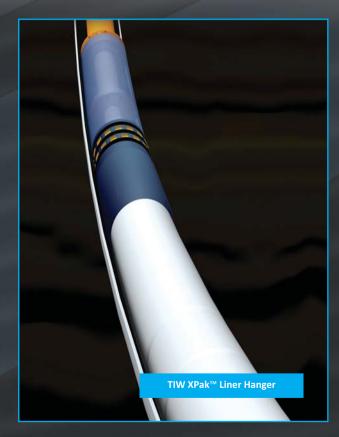

from the robust validation effort performed on our specialty connector product line. Our Controls Department obtained an order to design and qualify an ultra-deepwater controls module for Anadarko, an indication that our control system continues to penetrate the market and provides an additional opportunity for growth.

An important breakthrough was realized in 2017 when ExxonMobil approved DRIL-QUIP as a supplier for subsea trees and tubulars and we are pursuing approved supplier status with them for our subsea wellhead products. Finally, the sales team is pursuing many significant projects that would further improve our outlook in 2018 if we succeed in winning the work.

DRIL-QUIP do Brazil implemented an initiative to reduce manufacturing rework, which contributed to improved delivery and reduced cost. This initiative is a key factor in reaching on-time delivery commitments with Petrobras. DRIL-QUIP do Brazil also continues to pursue work from international oil companies operating in Brazil to help offset the impact from the significant decline in Petrobras orders in recent years.

In 2017, TIW delivered and assisted in the successful installation of the industry's largest ever expandable liner hanger packer for Saudi Aramco, opening up a new market for us. TIW's success with the XPak™ expandable liner hanger business continues to grow with over 875 successful installations to date solidifying industry acceptance in land and offshore markets worldwide.

Eastern Hemisphere

DRIL-QUIP Europe continued its successful campaign with

Premier Oil's Catcher project. Sixteen trees have been manufactured to date and 14 have been successfully installed. The project achieved first oil in 2017 on schedule and under budget. An additional three trees for the BWE Dussafu project in Gabon are on schedule for delivery in early 2018, less than one year after the order was awarded. DRIL-QUIP Europe also manufactured and delivered the first of several new HPHT 18-3/4" platform wellhead systems for AkerBP's Tambar platform development.

Asia Pacific

DRIL-QUIP Asia Pacific successfully delivered and assisted in the installation of 12 Dry Tree Systems for Shell Malikai, a Tension Leg Platform project offshore Sabah Malaysia.

The Asia Pacific operation also delivered wellheads ahead of schedule for the drilling phase of Kangean Energy's field development offshore Indonesia. Subsea trees and control system components for the completion phase of the Kangean project have been delivered on time to Indonesia for a scheduled site receive test prior to installation. Our high-pressure high-temperature (HPHT) R&D group based in Singapore continues development of subsea production system components suitable for HPHT applications. Construction of our HPHT R&D facility in Singapore is on schedule for occupation in March 2018.

Looking Forward

"Although the timing of the recovery is not a certainty, I am more optimistic about our markets than I have been in a long time."

As I write this letter, the per barrel price of oil is approximately \$20 higher than mid-2017. Although this increase is a positive trend for our business, the worldwide floating rig count that drives the majority of our sales continues to be down. Most analysts believe we are at the bottom of the cycle but the recovery will be long and slow. We must continue to adapt to our new market by making changes that reduce our costs and increase our bookings. We are implementing two new programs in 2018 that will involve all of our employees working towards those objectives. First, we are initiating a LEAN conversion within the Company. LEAN is a continuous improvement process that is used to identify and eliminate waste, thereby reducing lead times, costs and working capital requirements. Additionally, we are undergoing a sales transformation process to ensure our sales organization is structured properly to succeed in our new markets. Over the last few years, we have successfully developed new products through our R&D program that are ready to go to market.

Our future success is dependent on our ability to gain market acceptance of these new products and bundle them with sales of our legacy products as well as product lines we added as a result of the acquisitions of TIW and OPT.

Although the timing of the recovery is not a certainty, I am more optimistic about our markets than I have been in a long time.

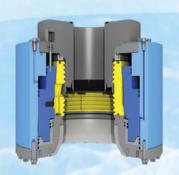

I thank all our employees for their efforts in 2017. I also thank our shareholders for maintaining confidence in the Company's ability to navigate through these challenging times.

President and

Chief Executive Officer

Hale OBerry

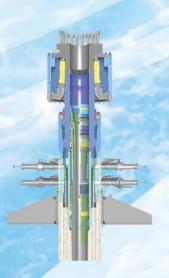

HorizontalBore[™] SUBSEA TREE

BigBore Ile™ Spetlight TECHNOLOGY

"AS A COMPANY, WE SPENT THE LAST FEW YEARS DEVELOPING NEW PRODUCTS THROUGH OUR R&D PROGRAM AND NOW THOSE PRODUCTS ARE READY TO GO TO MARKET."

Product and Services

Subsea Equipment

DRIL-QUIP provides components that are used in the process of drilling and completing wells from jackups, platforms and floating drilling vessels. Included in the Company's subsea product line are:

- Specialty Connectors and Associated Pipe
- Mudline Suspension Systems
- Subsea Wellheads
- Subsea Production Trees
- Subsea Manifolds

- Subsea Control Systems
- Production Riser Systems and Associated Running, Handling and Test Tools
- Production Riser Tensioner Systems and Associated Support Equipment

Downhole Tools

DRIL-QUIP provides TIW brand downhole drilling and production tools for use in land and offshore oil, gas and injection wells:

- Conventional and Expandable Liner Hangers
- Specialty Downhole Tools
- Production Packers
- Safety Valves

Surface Equipment

DRIL-QUIP provides components that are used in the process of drilling and completing wells on offshore production platforms, TLP's and Spars. Included in the Company's surface equipment product line are:

- Platform Wellheads
- Platform Production Trees

Offshore Rig Equipment

DRIL-QUIP provides:

- Wellhead Connectors
- Diverter Systems and Associated Running, Handling and Test Tools
- Drilling Riser Systems

 (including Telescopic Joint,
 Flex Joint, Riser and Fill-Up
 Joint, Booster Joint and Rig
 Floor Handling Equipment)

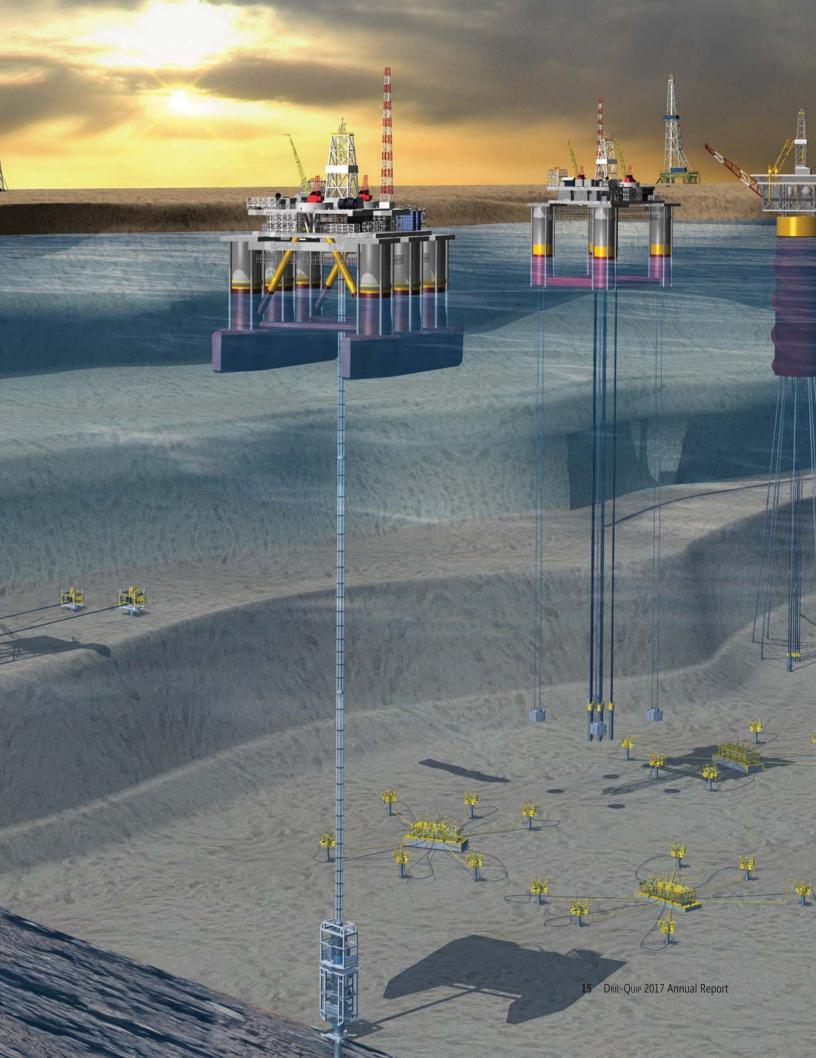

Services

DRIL-QUIP provides:

- Technical Advisory Assistance
- Rental Tools

Reconditioning

FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K includes certain statements that may be deemed to be "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Statements contained in all parts of this document that are not historical facts are forward-looking statements that involve risks and uncertainties that are beyond the control of Dril-Quip, Inc. (the "Company" or "Dril-Quip"). You can identify the Company's forward-looking statements by the words "anticipate," "estimate," "expect," "may," "project," "believe" and similar expressions, or by the Company's discussion of strategies or trends. Although the Company believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that these expectations will prove to be correct. These forward-looking statements include the following types of information and statements as they relate to the Company:

- future operating results and cash flow;
- scheduled, budgeted and other future capital expenditures;
- working capital requirements;
- the need for and the availability of expected sources of liquidity;
- the introduction into the market of the Company's future products;
- the market for the Company's existing and future products;
- the Company's ability to develop new applications for its technologies;
- the exploration, development and production activities of the Company's customers;
- compliance with present and future environmental regulations and costs associated with environmentally related penalties, capital expenditures, remedial actions and proceedings;
- effects of pending legal proceedings;
- changes in customers' future product and service requirements that may not be cost effective or within the Company's capabilities; and
- future operations, financial results, business plans and cash needs.

These statements are based on assumptions and analysis in light of the Company's experience and perception of historical trends, current conditions, expected future developments and other factors the Company believes were appropriate in the circumstances when the statements were made. Forward-looking statements by their nature involve substantial risks and uncertainties that could significantly impact expected results, and actual future results could differ materially from those described in such statements. While it is not possible to identify all factors, the Company continues to face many risks and uncertainties. Among the factors that could cause actual future results to differ materially are the risks and uncertainties discussed under "Item 1A. Risk Factors" in this report and the following:

- the volatility of oil and natural gas prices;
- the cyclical nature of the oil and gas industry;
- uncertainties associated with the United States and worldwide economies;
- uncertainties regarding political tensions in the Middle East, South America, Africa and elsewhere;
- current and potential governmental regulatory actions in the United States and regulatory actions and political unrest in other countries;
- uncertainties regarding future oil and gas exploration and production activities, including new regulations, customs requirements and product testing requirements;
- operating interruptions (including explosions, fires, weather-related incidents, mechanical failure, unscheduled downtime, labor difficulties, transportation interruptions, spills and releases and other environmental risks);
- project terminations, suspensions or scope adjustments to contracts reflected in the Company's backlog;
- the Company's reliance on product development;
- technological developments;
- the Company's reliance on third-party technologies;

- acquisition and merger activities involving the Company or its competitors;
- the Company's dependence on key employees and skilled machinists, fabricators and technical personnel;
- the Company's reliance on sources of raw materials;
- impact of environmental matters, including future environmental regulations;
- · competitive products and pricing pressures;
- fluctuations in foreign currency, including those attributable to the Brexit;
- the ability of the Organization of Petroleum Exporting Countries (OPEC) to set and maintain production levels and pricing;
- the Company's reliance on significant customers;
- creditworthiness of the Company's customers;
- fixed-price contracts;
- changes in general economic, market or business conditions;
- access to capital markets;
- negative outcome of litigation, threatened litigation or government proceedings;
- terrorist threats or acts, war and civil disturbances; and
- changes to, and differing interpretations of, tax laws with respect to our operations and subsidiaries.

Many of such factors are beyond the Company's ability to control or predict. Any of the factors, or a combination of these factors, could materially affect the Company's future results of operations and the ultimate accuracy of the forward-looking statements. Management cautions against putting undue reliance on forward-looking statements or projecting any future results based on such statements or present or prior earnings levels. Every forward-looking statement speaks only as of the date of the particular statement, and the Company undertakes no obligation to publicly update or revise any forward-looking statement.

Item 1. Business

General

Dril-Quip, Inc., a Delaware corporation formed in 1981 (the "Company" or "Dril-Quip"), designs, manufactures, sells and services highly engineered drilling and production equipment that is well suited primarily for use in deepwater, harsh environment and severe service applications. The Company's principal products consist of subsea and surface wellheads, subsea and surface production trees, subsea control systems and manifolds, mudline hanger systems, specialty connectors and associated pipe, drilling and production riser systems, liner hangers, wellhead connectors, diverters and safety valves. Dril-Quip's products are used by major integrated, large independent and foreign national oil and gas companies and drilling contractors throughout the world. Dril-Quip also provides technical advisory assistance on an as-requested basis during installation of its products, as well as rework and reconditioning services for customer-owned Dril-Quip products. In addition, Dril-Quip's customers may rent or purchase running tools from the Company for use in the installation and retrieval of the Company's products.

Dril-Quip has developed its broad line of subsea equipment, surface equipment and offshore rig equipment primarily through its internal product research and development efforts. The Company believes that it has achieved significant market share and brand name recognition with respect to its established products due to the technological capabilities, reliability, cost effectiveness and operational timesaving features of these products.

The Company's operations are organized into three geographic segments-Western Hemisphere (including North and South America; headquartered in Houston, Texas), Eastern Hemisphere (including Europe and Africa; headquartered in Aberdeen, Scotland) and Asia Pacific (including the Pacific Rim, Southeast Asia, Australia, India and the Middle East; headquartered in Singapore). Each of these segments sells similar products and services, and the Company has major manufacturing facilities in all three of its regional headquarter locations as well as in Macae, Brazil. The Company maintains additional facilities for fabrication and/or reconditioning and rework in Australia, Norway, Denmark, Nigeria, Indonesia, China, Ecuador, Egypt, Ghana, Hungary, Mexico, Qatar and Venezuela. The Company's manufacturing operations are vertically integrated, allowing it to perform substantially all of its forging, heat treating, machining, fabrication, inspection, assembly and testing at its own facilities. The Company's major operating subsidiaries are Dril-Quip (Europe) Limited, located in Aberdeen with branches in Denmark, Norway and Holland; Dril-Quip Asia Pacific PTE Ltd., located in Singapore; and Dril-Quip do Brasil LTDA, located in Macae, Brazil. Other operating subsidiaries include TIW Corporation (TIW) and Honing, Inc., both located in Houston, Texas; DQ Holdings Pty. Ltd., located in Perth, Australia; Dril-Quip Cross Ghana Ltd., located in Takoradi, Ghana; PT DQ Oilfield Services Indonesia, located in Jakarta, Indonesia; Dril-Quip (Nigeria) Ltd., located in Port Harcourt, Nigeria; Dril-Quip Egypt for Petroleum Services S.A.E., located in Alexandria, Egypt; Dril-Quip Oilfield Services (Tianjin) Co. Ltd., located in Tianjin, China with branches in Shenzhen and Beijing, China; Dril-Quip Qatar LLC, located in Doha, Qatar; TIW de Mexico S.A. de C.V., located in Villahermosa, Mexico; TIW de Venezuela S.A., located in Anaco, Venezuela and with a registered branch located in Shushufindi, Ecuador; TIW (UK) Limited, located in Aberdeen, Scotland; TIW Hungary LLC, located in Szolnok, Hungary; and TIW International LLC, with a registered branch located in Singapore. For financial information about our segments, please see Note 14 of the Notes to Consolidated Financial Statements, which presents revenues, depreciation and amortization and income before income taxes, total long-lived assets and total assets for 2017, 2016 and 2015. For a discussion of risks attendant to our foreign operations, see "Item 1A. Risk Factors-Our international operations expose us to instability and changes in economic and political conditions and other risks inherent to international business, which could have a material adverse effect on our results of operations, financial position or cash flows."

Dril-Quip markets its products through its offices and sales representatives located in the major international energy markets throughout the world. In 2017, the Company generated approximately 55% of its revenues from foreign sales compared to 66% and 63% in 2016 and 2015, respectively.

The Company makes available, free of charge on its website, its Annual Report on Form 10-K and quarterly reports on Form 10-Q (in both HTML and XBRL formats), current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practical after it electronically files such reports with, or furnishes them to, the Securities and Exchange Commission (SEC). The Company's website address is www.dril-quip.com. Documents and information on the Company's website, or on any other website, are not incorporated by reference into this Form 10-K. Any materials the Company files with the SEC may be read and copied at the SEC's Public Reference Room at 100 F Street, NE, Washington, D.C. 20549. Information concerning the Public Reference Room may be obtained by calling 1-800-SEC-0330. In addition, the SEC maintains a website (www.sec.gov) that contains reports the Company has filed with the SEC.

The Company also makes available free of charge on its website (www.dril-quip.com/govern.html) its:

- Corporate Governance Guidelines,
- Code of Business Conduct and Ethical Practices,
- Audit Committee Charter,
- Nominating and Governance Committee Charter, and
- Compensation Committee Charter.

Any stockholder, who so requests, may obtain a printed copy of any of these documents from the Company. Changes in or waivers to the Company's Code of Business Conduct and Ethical Practices involving directors and executive officers of the Company will be posted on its website.

Overview and Industry Outlook

Both the market for drilling and production equipment and services and the Company's business are substantially dependent on the condition of the oil and gas industry and, in particular, the willingness of oil and gas companies to make capital expenditures on exploration, drilling and production operations. The level of capital expenditures has generally been dependent upon the prevailing view of future oil and gas prices, which are influenced by numerous factors affecting the supply and demand for oil and gas, including worldwide economic activity, interest rates and the cost of capital, environmental regulation, tax policies and the ability and/or desire of OPEC and other producing nations to set and maintain production levels and prices. The Brent crude oil price reached a high of \$115.19 per barrel in June 2014 and then began to drop sharply during 2015, and continued to drop in 2016, reaching a low of \$26.01 per barrel in the first quarter of 2016, before rebounding to end the year at \$54.96 per barrel. During 2017, crude oil prices began to recover and ended the year at \$66.73 per barrel. According to the December 2017 release of the Short-Term Energy Outlook published by the EIA, Brent Crude oil prices averaged approximately \$54.15 per barrel in 2017 and the price is forecasted to average \$59.74 per barrel in 2018 and \$61.43 per barrel in 2019.

On November 30, 2016, OPEC met and decided to cut production by approximately 1.2 million barrels per day. The reduced production helped to increase the average price per barrel between 2016 and 2017. Capital expenditures are also dependent on the cost of exploring for and producing oil and gas, the availability, expiration date and price of leases, the discovery rate of new oil and gas reserves, technological advances and alternative opportunities to invest in onshore exploration and production operations. Oil and gas prices and the level of drilling and production activity have historically been characterized by significant volatility. Future declines in oil and gas prices may further adversely affect the willingness of some oil and gas companies to make capital expenditures on exploration, drilling and production operations, which could have an adverse impact on the Company's results of operations, financial position and cash flows. In its December 2017 Oil Market Report, the International Energy Agency projected United States crude oil production averaged an estimated 9.3 million barrels per day in 2017, with an average of 9.9 million barrels per day in the month of December, and is forecasted to average 10.3 million barrels per day in 2018.

Brent crude oil prices per barrel for the three-year period ended December 31, 2017 are summarized below:

		Brent Crude Oil Prices				
	2017		2016		2015	
High	\$	66.80	\$	54.96	\$	66.33
Low		43.98		26.01		35.26
Average		54.15		43.67		52.32
Closing, December 31,	\$	66.73	\$	54.96	\$	36.61

The volatility in Brent crude oil prices over the past three years continues to have a significant effect on major integrated, large independent and foreign national oil and gas companies' capital expenditure budgets. The Company expects continued pressure in both crude oil and natural gas prices, as well as in the level of drilling and production related activities, particularly as they relate to offshore activities. Even during periods of high prices for oil and natural gas, companies exploring for oil and gas may cancel or curtail programs, seek to renegotiate contract terms, including the price of products and services, or reduce their levels of capital expenditures for exploration and production for a variety of reasons. Lower drilling and production activity had a negative impact on the Company's results for the year ended December 31, 2017 and is expected to persist through 2018. A prolonged delay in the recovery of hydrocarbon prices could also lead to further material impairment charges to tangible or intangible assets or otherwise result in a material adverse effect on the Company's results of operations. See "Item

1A. Risk Factors—A material or extended decline in expenditures by the oil and gas industry could significantly reduce our revenue and income."

Recent Developments

There were no new recent developments in 2017.

Products and Services

Dril-Quip's revenues are generated from two sources: products and services. Product revenues are derived from the sale of drilling and production equipment. Service revenues are earned when the Company provides technical advisory assistance and rental tools during installation and retrieval of the Company's products. Additionally, the Company earns service revenues when rework and reconditioning services are provided. In 2017, the Company derived 77% of its revenues from the sale of its products and 23% of its revenues from services compared to 80% and 20% in 2016 and 81% and 19% in 2015, respectively. Service revenues generally correlate to revenues from product sales because increased product sales typically generate increased demand for technical advisory assistance services during installation and rental of running tools. The Company has substantial international operations, with approximately 55% of its revenues derived from foreign sales in 2017, 66% in 2016 and 63% in 2015. Substantially all of the Company's domestic revenue relates to operations in the U. S. Gulf of Mexico. Domestic revenue approximated 45% of the Company's total revenues in 2017, 34% in 2016, and 37% in 2015.

Product contracts are typically negotiated and sold separately from service contracts. In addition, service contracts are not typically included in the product contracts or related sales orders and are not offered to the customer as a condition of the sale of the Company's products. The demand for products and services is generally based on worldwide economic conditions in the oil and gas industry, and is not based on a specific relationship between the two types of contracts. Substantially all of the Company's sales are made on a purchase order basis. Purchase orders are subject to change or termination at the option of the customer. In case of a change or termination, the customer is required to pay the Company for work performed and other costs necessarily incurred as a result of the change or termination.

Generally, the Company attempts to raise its prices as its costs increase. However, the actual pricing of the Company's products and services is impacted by a number of factors, including global oil prices, competitive pricing pressure, the level of utilized capacity in the oil service sector, maintenance of market share, the introduction of new products and general market conditions.

Products

Dril-Quip designs, manufactures, fabricates, inspects, assembles, tests and markets subsea equipment, surface equipment and offshore rig equipment. The Company's products are used primarily to explore for oil and gas from offshore drilling rigs, such as floating rigs and jack-up rigs, and for drilling and production of oil and gas wells on offshore platforms, tension leg platforms (TLPs), Spars and moored vessels such as FPSOs. TLPs are floating production platforms that are connected to the ocean floor via vertical mooring tethers. A Spar is a floating cylindrical structure approximately six or seven times longer than its diameter and is anchored in place. FPSOs are floating production, storage and offloading monohull moored vessels. The TIW products are used in the drilling and production for oil and gas both onshore and offshore.

Subsea Equipment. Subsea equipment is used in the drilling and production of offshore oil and gas wells around the world. Included in the subsea equipment product line are subsea wellheads, mudline hanger systems, specialty connectors and associated pipe, production riser systems, subsea production trees, liner hangers, safety valves, subsea control systems and subsea manifolds.

Subsea wellheads are pressure-containing vessels that are sometimes referred to as a "wellhead housing" and are made from forged and machined steel. A casing hanger, also made of steel, lands inside the wellhead housing and suspends casing (pipe) downhole. As drilling depth increases, successively smaller diameter casing strings are installed, each suspended by an independent casing hanger. Subsea wellheads are utilized when drilling from floating drilling rigs, either semi-submersible or drillship types, or TLPs and Spars. The Company's flagship subsea wellhead, called the SS-15® Subsea Wellhead System, is rated for 15,000 psi internal pressure and is offered to the industry in a variety of configurations. The Company's newest wellhead product, the SS-20™ BigBore™ II-e Subsea Wellhead System, is designed to contain higher pressures (20,000 pounds per square inch (psi)) and provides the ability to reduce the number of casing strings in the well design by increasing load carrying and pressure capacities of casing hangers and associated installation tools.

Mudline hanger systems are used in jack-up drilling operations to support the weight of the various casing strings at the ocean floor while drilling a well. They also provide a method to disconnect the casing strings in an orderly manner at the ocean floor after the well has been drilled, and subsequently reconnect to enable production of the well by either tying it back vertically to a subsequently installed platform or by installing a shallow water subsea tree.

Large diameter weld-on *specialty connectors* (threaded or stab type) are used primarily in offshore wells drilled from floating drilling rigs, jack-up rigs, fixed platforms, TLPs and Spars. Specialty connectors join lengths of conductor or large diameter (16-inch or greater) casing. Specialty connectors provide a more rapid connection than other methods of connecting lengths of pipe. Connectors may be sold individually or as an assembly after being welded to sections of Company or customer supplied pipe. Dril-Quip's weld-on specialty connectors are designed to prevent cross threading and provide a quick, convenient method of joining casing joints with structural integrity compatible with casing strength.

Production riser systems are generally designed and manufactured to customer specifications. Production risers provide a vertical conduit from the subsea wellhead up to a TLP, Spar or FPSO floating at the surface.

A *subsea production tree* is an assembly composed of valves, a wellhead connector, control equipment and various other components installed on a subsea wellhead or a mudline hanger system and used to control the flow of oil and gas from a producing well. Subsea trees may be used as stand alone satellite wells or multiple well template mounted and cluster arrangements. These types typically produce via a subsea gathering system of manifolds and flowlines to a central control point located on a platform, TLP, Spar or FPSO. The use of subsea production trees has become an increasingly important method for producing wells located in hard-to-reach deepwater areas or economically marginal fields located in shallower waters. The Company is an established manufacturer of complicated dual-bore production trees. In addition, Dril-Quip manufactures a patented single bore (SingleBoreTM) subsea completion system which features a hydraulic valve mechanism instead of a wireline-installed mechanism that allows the operator to plug the tubing hanger annulus remotely from the surface via a hydraulic control line and subsequently unplug it when the well is put on production. This mechanism eliminates the need for an expensive multibore installation and workover riser, thereby saving both cost and installation time. Dril-Quip's subsea production trees are used in ultra-deepwater applications. These trees feature remote flowline and control connections, utilizing remotely operated intervention tools. The Company's subsea production trees are generally custom designed and manufactured to customer specifications.

A *subsea control system* provides control of subsea trees, manifolds, ocean floor process equipment and pipeline protection equipment. Dril-Quip has developed a variety of subsea control systems, including fiber optic based multiplex control systems that provide real time access to tree functions and tree equipment status. The control system can be packaged for shallow water or deepwater applications. Dril-Quip also manufactures control systems used in the installation, retrieval and workover of production equipment.

A *subsea manifold* is a structure located on the ocean floor consisting of valves, flowline connections and a control module used to collect and control the flow of oil and gas from subsea wells for delivery to a floating production unit or terminal.

Downhole Tools. Downhole tools are primarily comprised of liner hangers, production packers, safety valves and specialty downhole tools. A *liner hanger* is used to hang-off and seal casing into a previously installed casing string in the well bore, and can provide a means of tying back the liner for production to surface. Dril-Quip has developed a state-of-the-art liner hanger system and has installed its liner hangers in a number of difficult well applications, resulting in improved industry recognition and market opportunities. In addition to liner hanger systems that are well suited for onshore use, TIW offers expandable liner hanger systems that are typically utilized in challenging environments such as deepwater or High Pressure, High Temperature (HPHT) applications.

A *safety valve* is used to provide a quick, sure shutoff in the drill string at the drill floor and prevent flow up the drill pipe. The TIW Kelly Valve is located in the drill string below the kelly, the uppermost component of the drill string, and is designed to be closed under pressure to remove the kelly.

Surface Equipment. Surface equipment is principally used for flow control on offshore production platforms, TLPs and Spars. Included in the Company's surface equipment product line are platform wellheads, platform production trees and riser tensioners. Dril-Quip's development of platform wellheads and platform production trees was facilitated by adaptation of its existing subsea wellhead and tree technology to surface wellheads and trees.

Platform wellheads are pressure-containing forged and machined metal housings in which casing hangers are landed and sealed at the platform deck to suspend casings. The Company emphasizes the use of metal-to-metal sealing wellhead systems with operational time-saving features which can be used in high pressure, high temperature and corrosive drilling and production applications.

After installation of a wellhead, *a platform production tree*, consisting of gate valves, a surface wellhead connector, controls, tree cap and associated equipment, is installed on the wellhead to control and regulate oil or gas production. Platform production trees are similar to subsea production trees but utilize less complex equipment and more manual, rather than hydraulically actuated, valves and connectors. Platform wellheads and platform production trees and associated equipment are designed and manufactured in accordance with customer specifications.

Riser tensioners are used on a floating drilling/production vessel to provide a continuous and reliable upward force on a riser string that is independent of the movement of the floating vessel.

Offshore Rig Equipment. Offshore rig equipment includes drilling riser systems, wellhead connectors and diverters. The drilling riser system consists of (i) lengths of riser pipe and associated riser connectors that secure one to another; (ii) the telescopic joint, which connects the entire drilling riser system to the diverter at top of the riser at the rig and provides a means to compensate for vertical motion of the rig relative to the ocean floor; and (iii) the wellhead connector, which provides a means for remote connection and disconnection of the blowout preventer stack to or from the wellhead. Diverters are used to provide protection from shallow gas blowouts and to divert gases off of the rig during the drilling operation.

Wellhead connectors are used on production riser systems and drilling riser systems. They are also used on both TLPs and Spars, which are installed in deepwater applications. The principal markets for offshore rig equipment are new rigs, rig upgrades, TLPs and Spars. Drilling risers, wellhead connectors and diverters are generally designed and manufactured to customer specifications.

Certain products of the Company are used in potentially hazardous drilling, completion and production applications that can cause personal injury, product liability and environmental claims. See "Item 1A. Risk Factors—Our business involves numerous operating hazards that may not be covered by insurance. The occurrence of an event not fully covered by insurance could have a material adverse effect on our results of operations, financial position and cash flows."

Services

The Company provides services to customers, including technical advisory assistance and rental tools during installation and retrieval of the Company's products. The Company also provides rework and reconditioning services on its customerowned products. These services are provided from the Company's worldwide locations and represented approximately 23% of revenues in 2017 compared to 20% in 2016 and 19% in 2015.

Technical Advisory Assistance. Dril-Quip does not install products for its customers, but it does provide technical advisory assistance to the customer, if requested, in the installation of its products. The customer is not obligated to utilize these services and may use its own personnel or a third party to perform these services. Technical advisory assistance services performed by the Company are negotiated and sold separately from the Company's products. These services are not a prerequisite to the sale of the Company's products as its products are fully functional on a stand alone basis. The Company's technicians provide assistance in the onsite installation of the Company's products and are available on a 24-hour call out from the Company's facilities located in Houston, Texas; Midland, Texas; Oklahoma City, Oklahoma; Youngsville, Louisiana; New Orleans, Louisiana; Villahermosa, Mexico; Nisku, Alberta, Canada; Anaco, Venezuela; Shushufindi, Ecuador; Macae, Brazil; Aberdeen, Scotland; Szolnok, Hungary; Stavanger, Norway; Esbjerg, Denmark; Port Harcourt, Nigeria; Alexandria, Egypt; Takoradi, Ghana; Tianjin, China; Doha, Qatar; Singapore; and Perth, Australia.

Rental. The Company rents running and installation tools for use in installing its products. These tools are required to install and retrieve the Company's products that are purchased by customers. Rental or purchase of running tools is not a condition of the sale of the Company's products and is contracted for separately from product sales and other services offered by the Company. Running tools are available from Dril-Quip's locations in Houston, Texas; Midland, Texas; Oklahoma City, Oklahoma; Youngsville, Louisiana; Villahermosa, Mexico; Nisku, Alberta, Canada; Anaco, Venezuela; Shushufindi, Ecuador; Macae, Brazil; Aberdeen, Scotland; Szolnok, Hungary; Stavanger, Norway; Esbjerg, Denmark; Beverwijk, Holland; Singapore; and Perth, Australia.

Reconditioning. The Company provides reconditioning of its customer-owned products at its facilities in Houston, Texas; Macae, Brazil; Aberdeen, Scotland; Stavanger, Norway; Esbjerg, Denmark; Port Harcourt, Nigeria; Alexandria, Egypt; Takoradi, Ghana; Balikpapan, Indonesia; Tianjin, China; Doha, Qatar; Singapore; and Perth, Australia. The Company does not typically service, repair or recondition its competitors' products.

Manufacturing

Dril-Quip has major manufacturing facilities in Houston, Texas; Aberdeen, Scotland; Singapore; and Macae, Brazil. See "Item 2. Properties—Manufacturing Facilities." Only the Houston facility at Eldridge Parkway provides forged and heat treated products to its major manufacturing facilities. Dril-Quip maintains its high standards of product quality through the implementation of Advanced Product Quality Planning (APQP) methodologies, as well as through the use of quality control specialists.

The Company's Houston, Aberdeen, Singapore and Macae manufacturing plants are ISO 14001, OHSAS 18001 and ISO 9001 certified. The Houston, Aberdeen, Singapore and Macae plants are also licensed to applicable American Petroleum Institute (API) product specifications and are API Q1, 9th edition compliant. The Metallurgical Laboratory at the Houston operations is ISO 17025 certified for Crack Tip Opening Displacement, Hardness, Tensile and Charpy V-Notch testing. Dril-Quip works to maintain its high standards of product quality through the use of precision measuring equipment such as Gage

Masters, Faro Arms, Coordinate Measuring Machine and the application of APQP. APQP entails concurrent engineering principles to identify and address potential quality concerns early in the product development process. The Company has the capability to manufacture various products from each of its product lines at its major manufacturing facilities and believes that this localized manufacturing capability is essential in order to compete with the Company's major competitors.

The Company's manufacturing processes are vertically integrated, providing capability for the majority of its forging and heat treating and essentially all of its machining, fabrication, inspection, assembly and testing to be performed in-house. The Company's primary raw material is cast steel ingots, from which it produces steel shaped forgings at its forging and heat treatment facility in Houston, Texas. The Company routinely purchases steel ingots from multiple suppliers on a purchase order basis and does not have any long-term supply contracts. The Company's Houston facility provides forgings and heat treatment for its Houston, Aberdeen, Singapore and Macae facilities. The Company has made significant capital investments in developing its vertically integrated manufacturing capability. Prolonged periods of low demand in the market for drilling and production equipment could have a greater effect on the Company than on certain of its competitors that have not made such large capital investments in their facilities.

Dril-Quip's manufacturing facilities utilize state-of-the-art computer numerically controlled (CNC) machine tools and equipment, which contribute to the Company's product quality and timely delivery. The Company has also developed a cost effective, in-house machine tool rebuild capability which produces "like new" machine upgrades with customized features to enhance the economic manufacturing of its specialized products. The Company purchases quality used machine tools as they become available and stores them at its facilities to be rebuilt and upgraded as the need arises. Rebuilding used machine tools allows for greater customization suitable for manufacturing Dril-Quip proprietary product lines. This strategy provides the added advantage of in-house expertise for repairs and maintenance of these machines. A significant portion of the Company's manufacturing capacity growth has been through the rebuild/upgrade of quality used machine tools, including the replacement of outdated control systems with state-of-the-art CNC controls.

Customers

The Company's principal customers are major integrated, large independent and foreign national oil and gas companies. Drilling contractors and engineering and construction companies also represent a portion of the Company's customer base. The Company's customers are generally oil and gas companies that are well-known participants in exploration and production.

The Company is not dependent on any one customer or group of customers. In 2017, the Company's top 15 customers represented approximately 49% of total revenues, and Chevron and its affiliated companies accounted for approximately 14% of total revenues. In 2016 and 2015, the Company's top 15 customers represented approximately 75% and 61% of total revenues, respectively, and Chevron and its affiliated companies accounted for approximately 16% and 12% of total revenues, respectively. No other customer accounted for more than 10% of total revenues in 2017, 2016 or 2015. The number and variety of the Company's products required in a given year by any one customer depends upon the amount of that customer's capital expenditure budget devoted to exploration and production and on the results of competitive bids for major projects. Consequently, a customer that accounts for a significant portion of revenues in one fiscal year may represent an immaterial portion of revenues in subsequent years. While the Company is not dependent on any one customer or group of customers, the loss of one or more of its significant customers could, at least on a short-term basis, have an adverse effect on the Company's results of operations.

Backlog

Backlog consists of firm customer orders of Dril-Quip products for which a purchase order or signed contract has been received, satisfactory credit or financing arrangements exist and delivery is scheduled. Historically, the Company's revenues for a specific period have not been directly related to its backlog as stated at a particular point in time. The Company's product backlog was approximately \$207 million at December 31, 2017 and \$318 million at December 31, 2016. The backlog at the end of 2017 represents a decrease of approximately \$111 million, or 35%, from the end of 2016. The Company's backlog balance during 2017 was positively impacted by translation adjustments of approximately \$2.7 million, due primarily to the strengthening of the Brazilian Real against the U.S. dollar, offset by approximately \$3.1 million in cancellations.

The Company expects to fill approximately 70% to 80% of the December 31, 2017 product backlog by December 31, 2018. The remaining backlog at December 31, 2017 consists of longer-term projects which are being designed and manufactured to customer specifications requiring longer lead times. In August 2012, the Company's Brazilian subsidiary, Dril-Quip do Brasil LTDA, was awarded a four-year contract by Petrobras, Brazil's national oil company. Following an interim amendment to extend the term of the contract pending the resolution of discussions, the Company entered into an amendment on October 17, 2016 to extend the duration of the contract until July 2020. The contract was valued at \$650 million, net of Brazilian taxes, at exchange rates in effect at that time (approximately \$400.8 million based on the December 31, 2017 exchange rate of 3.31 Brazilian real to 1.00 U.S. dollar) if all the equipment under the contract was ordered. Amounts are included in the Company's backlog as purchase orders under the contract are received. Revenues of approximately \$154

million have been recognized on this contract through December 31, 2017. As of December 31, 2017, the Company's backlog included \$16 million of purchase orders under this Petrobras contract. The Company has not recognized revenue of approximately \$2 million as of December 31, 2017 for certain items of equipment that were completed but not yet accepted for delivery by Petrobras. If Petrobras does not ultimately accept these items for delivery or if they refuse to accept these or similar items completed in the future, the Company's results of operations may be adversely affected. As part of the amendment to the contract, Petrobras agreed to issue purchase orders totaling a minimum of approximately \$30 million (based on current exchange rates) before 2019. As of December 31, 2017, approximately \$10.9 million of the purchase orders have been issued to date. The Company cannot provide assurance that Petrobras will order all of the equipment under the contract. See "Item 1A. Risk Factors—Our backlog is subject to unexpected adjustments and cancellations and is, therefore, an uncertain indicator of our future revenues and earnings."

Marketing and Sales

Dril-Quip markets its products and services throughout the world directly through its sales personnel in multiple domestic and international locations. In addition, in certain foreign markets the Company utilizes independent sales agents or representatives to enhance its marketing and sales efforts.

Some of the locations in which Dril-Quip has sales agents or representatives are Trinidad, Indonesia, Malaysia, Saudi Arabia and United Arab Emirates. Although they do not have authority to contractually bind the Company, these representatives market the Company's products in their respective territories in return for sales commissions. The Company advertises its products and services in trade and technical publications targeted to its customer base. The Company also participates in industry conferences and trade shows to enhance industry awareness of its products.

The Company's customers generally order products on a purchase order basis. Orders, other than those considered to be long-term projects, are typically filled within twelve months after receipt, depending on the type of product and whether it is sold out of inventory or requires some customization. Contracts for certain of the Company's larger, more complex products, such as subsea production trees, drilling risers and equipment for TLPs and Spars, can take a year or more to complete.

The primary factors influencing a customer's decision to purchase the Company's products are the quality, reliability and reputation of the product, price, technology, service and timely delivery. For large drilling and production system orders, project management teams coordinate customer needs with the Company's engineering, manufacturing and service organizations, as well as with subcontractors and vendors.

A portion of the Company's business consists of designing, manufacturing and selling equipment, as well as offering technical advisory assistance during installation of the equipment, for major projects pursuant to competitive bids. The number of such projects in any year may fluctuate. The Company's profitability on such projects is critically dependent on making accurate and cost effective bids and performing efficiently in accordance with bid specifications. Various factors, including availability of raw materials, changes in customer requirements and governmental regulations, can adversely affect the Company's performance on individual projects, with potential material adverse effects on project profitability.

Product Development and Engineering

The technological demands of the oil and gas industry continue to increase as exploration and drilling expand into more hostile environments. Conditions encountered in these environments include water depths in excess of 10,000 feet, well pressures exceeding 15,000 psi, well flowing temperatures beyond 350°F (Fahrenheit) and mixed flows of oil, gas and water that may also be highly corrosive and impact material properties.

Since its founding in 1981, Dril-Quip has actively engaged in continuing development efforts to generate new products and improve existing products. When developing new products, the Company typically seeks to design the most technologically advanced version for a particular application to establish its reputation and qualification in that product. Thereafter, the Company leverages its expertise in the more technologically advanced product to produce less costly and complex versions of the product for less demanding applications. The Company also focuses its activities on reducing the overall cost to the customer, which includes not only the initial capital cost but also operating, installation and maintenance costs associated with its products.

In the 1980s, the Company introduced its first product, specialty connectors, as well as mudline suspension systems, template systems and subsea wellheads. In the 1990s, the Company introduced a series of new products, including diverters, wellhead connectors, SingleBoreTM subsea trees, improved severe service dual bore subsea trees, subsea and platform valves, platform wellheads, platform trees, subsea tree workover riser systems, drilling riser systems and TLP and Spar production riser systems. Since 2000, Dril-Quip has introduced multiple new products, including liner hangers, subsea control systems, subsea manifolds and riser tensioners.

Historically, Dril-Quip's product development work is primarily conducted at its facilities in Houston, Texas; however, such activities have gradually increased in other regions, such as Aberdeen, Scotland, Singapore and Brazil. In addition to the work of its product development staff, the Company's application engineering staff provides technical services to customers in connection with the design and sales of its products. The Company's ability to develop new products and maintain technological advantages is important to its future success. See "Item 1A. Risk Factors—Our business could be adversely affected if we do not develop new products and secure and retain patents related to our products."

The Company believes that the success of its business depends more on the technical competence, creativity and marketing abilities of its employees than on any individual patent, trademark or copyright. Nevertheless, as part of its ongoing product development and manufacturing activities, Dril-Quip's policy has been to seek patents when appropriate on inventions concerning new products and product improvements. All patent rights for products developed by employees are assigned to the Company and almost all of the Company's products have components that are covered by patents.

In 2016, major production milestones were met for several key global projects. In the North Sea, seven subsea completion trees for a subsea field development project were successfully installed. Subsea trees previously delivered for a field development project off the coast of Trinidad were subsequently installed. Also, off the cost of Trinidad, multiple deepwater subsea wellhead systems were installed with the support of a service facility in Trinidad; this is Dril-Quip's first aftermarket support presence in the region. With the completion of engineering, manufacturing, assembly and testing of dry tree equipment, Dril-Quip was able to support the tieback of multiple wells for projects in the Gulf of Mexico and off the coast of Malaysia. Engineering, manufacturing, assembly and test work continued on additional dry tree projects in the Company's backlog. The requirements of the equipment in these projects represent significant technological challenges, the development of which is serving to enhance the Company's overall engineering capabilities.

In an ongoing test program, the Company continued the utilization of its recently constructed high-load horizontal test machine and fatigue test machine for rigorous validation testing of its existing specialty connector product line. Active engineering programs have been initiated in-house to continue development in specialty connector product enhancements as well as new product development. Engineering development efforts are on-going in subsea production systems and capital equipment product lines.

In early 2016, the Company announced that it is establishing a research and development facility in Singapore that focuses on materials and products suitable for HPHT applications. The new facility, which is expected to open in early 2018, will serve as an additional hub for research and development activities for the Company.

Dril-Quip has numerous U.S. registered trademarks, including Dril-Quip®, Quik-Thread®, Quik-Stab®, Multi-Thread®, MS-15®, SS-15®, SS-10®, SU-90®, DX® and TIW®. The Company has registered its trademarks in the countries where such registration is deemed material.

Although in the aggregate, the Company's patents and trademarks are of considerable importance to the manufacturing and marketing of many of its products, the Company does not consider any single patent or trademark or group of patents or trademarks to be material to its business as a whole, except the Dril-Quip® trademark. The Company also relies on trade secret protection for its confidential and proprietary information. The Company routinely enters into confidentiality agreements with its employees and suppliers. There can be no assurance, however, that others will not independently obtain similar information or otherwise gain access to the Company's trade secrets.

Competition

Dril-Quip faces significant competition from other manufacturers and suppliers of exploration and production equipment. Several of its primary competitors are diversified multinational companies with substantially larger operating staffs and greater capital resources than those of the Company and which, in many instances, have been engaged in the manufacturing business for a much longer period of time than the Company. The Company competes principally with the petroleum production equipment segments of Baker Hughes, a GE Company, Schlumberger, Ltd., TechnipFMC plc and Aker Solutions.

Because of their relative size and diversity of products, several of the Company's competitors have the ability to provide "turnkey" services for drilling and production applications, which enables them to use their own products to the exclusion of Dril-Quip's products. See "Item 1A. Risk Factors—We may be unable to successfully compete with other manufacturers of drilling and production equipment." The Company also competes to a lesser extent with a number of other companies in various products. The principal competitive factors in the petroleum drilling and production equipment markets are quality, reliability and reputation of the product, price, technology, service and timely delivery.

Employees

The total number of the Company's employees as of December 31, 2016 was 2,355, which included the addition of 406 employees of TIW during the fourth quarter of 2016. Of those 2,355, 1,193 were located in the United States. As a result of additional worldwide reductions in workforce and natural attrition, as of December 31, 2017, the total number of the Company's employees was 2,019, a 14% reduction from December 31, 2016. Of these 2,019 employees, 1,095 are located in the United States. The Company's ongoing efforts to control costs and reduce its workforce resulted in \$3.0 million in severance costs being recognized in the twelve months ended December 31, 2017. In addition, reductions in pay, estimated at approximately \$10.0 million on an annualized basis, were instituted globally at the end of the first quarter of 2017. Substantially all of the Company's employees are not covered by collective bargaining agreements, and the Company considers its employee relations to be good.

The Company's operations depend in part on its ability to attract quality employees. While the Company believes that its wage and salary rates are competitive and that its relationship with its labor force is good, a significant increase in the wages and salaries paid by competing employers could result in a reduction of the Company's labor force, increases in the wage and salary rates paid by the Company or both. If either of these events were to occur, in the near-term, the profits realized by the Company from work in progress would be reduced and, in the long-term, the production capacity and profitability of the Company could be diminished and the growth potential of the Company could be impaired. See "Item 1A. Risk Factors—Loss of our key management or other personnel could adversely impact our business."

Governmental Regulations

Many aspects of the Company's operations are affected by political developments and are subject to both domestic and foreign governmental regulations, including those relating to oilfield operations, the discharge of materials into the environment from our manufacturing or other facilities, health and worker safety aspects of our operations, or otherwise relating to human health and environmental protection. In addition, the Company depends on the demand for its services from the oil and gas industry and, therefore, is affected by changing taxes, price controls and other laws and regulations relating to the oil and gas industry in general, including those specifically directed to onshore and offshore operations. The adoption of laws and regulations curtailing exploration and development drilling for oil and gas for economic or other policy reasons could adversely affect the Company's operations by limiting demand for the Company's products. See "Item 1A. Risk Factors—Our operations and our customers' operations are subject to a variety of governmental laws and regulations that may increase our costs, limit the demand for our products and services or restrict our operations."

In recent years, increased concern has been raised over the protection of the environment. Legislation to regulate emissions of greenhouse gases has been introduced, but not enacted, in the U.S. Congress, and there has been a wide-ranging policy debate, both nationally and internationally, regarding the impact of these gases and possible means for their regulation. In addition, efforts have been made and continue to be made in the international community toward the adoption of international treaties or protocols that would address global climate change issues, such as the annual United Nations Climate Change Conferences. In November 2015, the United Nations Climate Change Conference (COP21) was held in Paris with the objective to achieve a legally binding and universal agreement on climate, with the aim of keeping global warming below 20 C (Celsius), from all nations, regardless of size. The Paris Agreement, signed by the U.S. on April 22, 2016, requires countries to review and "represent a progression" in their nationally determined contributions, which set greenhouse gas emission reduction goals, every five years. However, in August 2017, the United States informed the United Nations of its intent to withdraw from the Paris Agreement. The earliest possible effective withdrawal date from the Paris Agreement is November 2020. Also, the U.S. Environmental Protection Agency (EPA) has undertaken efforts to collect information regarding greenhouse gas emissions and their effects. Following a finding by the EPA that certain greenhouse gases represent a danger to human health, the EPA has expanded its regulations relating to those emissions and has adopted rules imposing permitting and reporting obligations. The results of the permitting and reporting requirements could lead to further regulation of these greenhouse gases by the EPA. Moreover, specific design and operational standards apply to U.S. outer continental shelf vessels, rigs, platforms, vehicles, structures and equipment.

The U.S. Bureau of Safety and Environmental Enforcement (BSEE) regulates the design and operation of well control and other equipment at offshore production sites, among other requirements. BSEE has adopted stricter requirements for subsea drilling production equipment. In April 2016, BSEE published a final blowout preventer systems and well control rule, which focuses on blowout preventer requirements and includes reforms in well design, well control, casing, cementing, real-time monitoring and subsea containment, among other things. However, in December 2017, BSEE published a proposed rule that would revise a number of the requirements in the blowout preventer systems and well control rule. In addition, drilling in certain areas has been opposed by environmental groups and, in certain areas, has been restricted. For example, in December 2016, the Obama administration banned offshore drilling in portions of the Arctic and Atlantic oceans. However, in January 2018, the Trump administration announced a proposal to open most U.S. coastal waters to offshore drilling. To the extent that new laws or other governmental actions prohibit or restrict drilling or impose additional environmental protection requirements that result in increased costs to the oil and gas industry in general and the drilling industry in particular, the business of the

Company could be adversely affected. The Company cannot determine to what extent its future operations and earnings may be affected by new legislation, new regulations or changes in existing regulations. See "Item 1A. Risk Factors—Our business and our customers' businesses are subject to environmental laws and regulations that may increase our costs, limit the demand for our products and services or restrict our operations."

Our operations are also governed by laws and regulations related to workplace safety and worker health, such as the Occupational Safety and Health Act and regulations promulgated thereunder.

Based on the Company's experience to date, the Company does not currently anticipate any material adverse effect on its business or consolidated financial position as a result of future compliance with existing environmental, health and safety laws. However, future events, such as changes in existing laws and regulations or their interpretation, more vigorous enforcement policies of or by regulatory agencies, or stricter or different interpretations of existing laws and regulations, may require additional expenditures by the Company, which may be material.

Executive Officers of the Registrant

Pursuant to Instruction 3 to Item 401(b) of Regulation S-K and General Instruction G(3) to Form 10-K, the following information is included in Part I of this Form 10-K:

The following table sets forth the names, ages (as of February 20, 2018) and positions of the Company's executive officers:

Name	Age	Position
Blake T. DeBerry	58	President, Chief Executive Officer and Director
James A. Gariepy	60	Senior Vice President and Chief Operating Officer
Jeffrey J. Bird	51	Vice President and Chief Financial Officer
James C. Webster	48	Vice President, General Counsel and Secretary

Blake T. DeBerry has been President and Chief Executive Officer and a member of the Board of Directors of the Company since October 2011. Mr. DeBerry was Senior Vice President—Sales and Engineering from July 2011 until October 2011, and was Vice President—Dril-Quip Asia Pacific (which covers the Pacific Rim, Asia, Australia, India and the Middle East) from March 2007 to July 2011. He has been an employee of the Company since 1988 and has held a number of management and engineering positions in the Company's domestic and international offices. Mr. DeBerry holds a Bachelor of Science degree in mechanical engineering from Texas Tech University.

James A. Gariepy is Senior Vice President and Chief Operating Officer, positions he has held since October 2011. Mr. Gariepy was Senior Vice President—Manufacturing, Project Management and Service from July 2011 until October 2011, and was Vice President—Dril-Quip Europe (which covers Europe, Africa and Northern Eurasia) from March 2007 to July 2011. He has held domestic and international management positions since joining the Company in 2004. Mr. Gariepy holds a Bachelor of Science degree in mechanical engineering from the Lawrence Technological University and an MBA from the University of St. Thomas.

Jeffrey J. Bird is Vice President and Chief Financial Officer, positions he has held since he joined the Company in March 2017. From December 2014 through February 2017, he was Executive Vice President and Chief Financial Officer of Frank's International, a provider of engineered tubular services to the oil and gas industry. Prior to joining Frank's International, Mr. Bird was the Vice President of Finance and Chief Financial Officer of Ascend Performance Materials, a provider of chemicals, fibers and plastics in Houston, Texas, from September 2010. Prior to joining Ascend, Mr. Bird served in a variety of accounting and finance roles, primarily in the industrial manufacturing sector including serving as a division Chief Financial Officer at Danaher Corporation. Mr. Bird holds a BA in Accounting from Cedarville University in Ohio.

James C. Webster is Vice President, General Counsel and Secretary. He joined the Company in February 2011 as Vice President and General Counsel and was elected to the additional position of Secretary in May 2011. From September 2005 until September 2010, he was Vice President, General Counsel and Secretary of M-I SWACO, at the time, a joint venture between Smith International, Inc. and Schlumberger Ltd., and then was an area general counsel for Schlumberger from September 2010 to February 2011 following Schlumberger's acquisition of Smith International. From 1999 to September 2005, he was an associate with, and later a partner in, the law firm of Gardere Wynne Sewell LLP in Houston. Mr. Webster holds an economics degree from the University of Arizona and a joint Law/MBA from Loyola University.

Item 1A. Risk Factors

In this Item 1A., the terms "we," "our," "us" and "Dril-Quip" used herein refer to Dril-Quip, Inc. and its subsidiaries unless otherwise indicated or as the context so requires.

A material or extended decline in expenditures by the oil and gas industry could significantly reduce our revenue and income.

Our business depends upon the condition of the oil and gas industry and, in particular, the willingness of oil and gas companies to make capital expenditures on exploration, drilling and production operations. The level of capital expenditures is generally dependent on the prevailing view of future oil and gas prices, which are influenced by numerous factors affecting the supply and demand for oil and gas, including:

- worldwide economic activity;
- the level of exploration and production activity;
- interest rates and the cost of capital;
- environmental regulation;
- federal, state and foreign policies regarding exploration and development of oil and gas;
- the ability and/or desire of OPEC and other major producers to set and maintain production levels and pricing;
- governmental regulations regarding future oil and gas exploration and production;
- the cost of exploring and producing oil and gas;
- the cost of developing alternative energy sources;
- the availability, expiration date and price of onshore and offshore leases;
- the discovery rate of new oil and gas reserves in onshore and offshore areas;
- the success of drilling for oil and gas in unconventional resource plays such as shale formations;
- alternative opportunities to invest in onshore exploration and production opportunities;
- technological advances; and
- weather conditions.

Oil and gas prices and the level of drilling and production activity have been characterized by significant volatility in recent years. Worldwide military, political and economic events have contributed to crude oil and natural gas price volatility and are likely to continue to do so in the future.

We expect continued pressure in both crude oil and natural gas prices, as well as in the level of drilling and production related activities, particularly as they relate to offshore activities. Even during periods of high prices for oil and natural gas, companies exploring for oil and gas may cancel or curtail programs, seek to renegotiate contract terms, including the price of our products and services, or reduce their levels of capital expenditures for exploration and production for a variety of reasons. These risks are greater during periods of low or declining commodity prices. The sustained lower crude oil and natural gas prices, along with lower drilling and production activity, have had a negative impact on our results of operations.

We may not be able to satisfy technical requirements, testing requirements or other specifications under contracts and contract tenders.

Our products are used primarily in deepwater, harsh environment and severe service applications. Our contracts with customers and customer requests for bids typically set forth detailed specifications or technical requirements for our products and services, which may also include extensive testing requirements. We anticipate that such testing requirements will become more common in our contracts. In addition, recent scrutiny of the drilling industry has resulted in more stringent technical specifications for our products and more comprehensive testing requirements for our products to ensure compliance with such specifications. We cannot assure you that our products will be able to satisfy the specifications or that we will be able to perform the full-scale testing necessary to prove that the product specifications are satisfied in future contract bids or under existing contracts, or that the costs of modifications to our products to satisfy the specifications and testing will not adversely affect our results of operations. If our products are unable to satisfy such requirements, or we are unable to perform any

required full-scale testing, our customers may cancel their contracts and/or seek new suppliers, and our business, results of operations, cash flows or financial position may be adversely affected.

We rely on technology provided by third parties and our business may be materially adversely affected if we are unable to renew our licensing arrangements with them.

We have existing contracts and may enter into new contracts with customers that require us to use technology or to purchase components from third parties, including some of our competitors. In the ordinary course of our business, we have entered into licensing agreements with some of these third parties for the use of such technology, including a license from a competitor of a technology important to our subsea wellheads. We may not be able to renew our existing licenses or to purchase these components on terms acceptable to us, or at all. If we are unable to use a technology or purchase a component, we may not be able to meet existing contractual commitments without increased costs or modifications or at all. In addition, we may need to stop selling products incorporating that technology or component or to redesign our products, either of which could result in a material adverse effect on our business and operations.

We may be unable to successfully compete with other manufacturers of drilling and production equipment.

Several of our primary competitors are diversified multinational companies with substantially larger operating staffs and greater capital resources than ours and which have been engaged in the manufacturing business for a much longer time than us. If these competitors substantially increase the resources they devote to developing and marketing competitive products and services, we may not be able to compete effectively. Similarly, consolidation among our competitors could enhance their product and service offerings and financial resources, further intensifying competition.

The loss of a significant customer could have an adverse impact on our financial results.

Our principal customers are major integrated oil and gas companies, large independent and foreign national oil and gas companies throughout the world. Drilling contractors and engineering and construction companies also represent a portion of our customer base. In 2017, our top 15 customers represented approximately 49% of total revenues, and Chevron and its affiliated companies accounted for approximately 14% of total revenues. In 2016 and 2015, our top 15 customers represented approximately 75% and 61% of total revenues, respectively, and Chevron and its affiliated companies accounted for approximately 16% and 12% of total revenues, respectively. No other customer accounted for more than 10% of total revenues in 2017, 2016 or 2015. While we are not dependent on any one customer or group of customers, the loss of one or more of our significant customers could have an adverse effect on our results of operations, financial position and cash flows.

Our customers' industries are undergoing continuing consolidation that may impact our results of operations.

The oil and gas industry is rapidly consolidating and, as a result, some of our largest customers have consolidated and are using their size and purchasing power to seek economies of scale and pricing concessions. This consolidation may result in reduced capital spending by some of our customers or the acquisition of one or more of our primary customers, which may lead to decreased demand for our products and services. We cannot assure you that we will be able to maintain our level of sales to a customer that has consolidated or replace that revenue with increased business activity with other customers. As a result, the acquisition of one or more of our primary customers may have a significant negative impact on our results of operations, financial position or cash flows. We are unable to predict what effect consolidations in the industry may have on price, capital spending by our customers, our selling strategies, our competitive position, our ability to retain customers or our ability to negotiate favorable agreements with our customers.

Increases in the cost of raw materials and energy used in our manufacturing processes could negatively impact our profitability.

Any increases in commodity prices for items such as nickel, molybdenum and heavy metal scrap that are used to make the steel alloys required for our products would result in an increase in our raw material costs. Similarly, any increase in energy costs would increase our product costs. If we are not successful in raising our prices on products to compensate for any increased raw material or energy costs, our margins will be negatively impacted.

We depend on third-party suppliers for timely deliveries of raw materials, and our results of operations could be adversely affected if we are unable to obtain adequate supplies in a timely manner.

Our manufacturing operations depend upon obtaining adequate supplies of raw materials from third parties. The ability of these third parties to deliver raw materials may be affected by events beyond our control. Any interruption in the supply of raw materials needed to manufacture our products could adversely affect our business, results of operations and reputation with our customers.

Conditions in the global financial system may have impacts on our business and financial position that we currently cannot predict.

Uncertainty in the credit markets may negatively impact the ability of our customers to finance purchases of our products and services and could result in a decrease in, or cancellation of, orders included in our backlog or adversely affect the collectability of our receivables. If the availability of credit to our customers is reduced, they may reduce their drilling and production expenditures, thereby decreasing demand for our products and services, which could have a negative impact on our financial position. Additionally, unsettled conditions could have an impact on our suppliers, causing them to be unable to meet their obligations to us. A prolonged constriction on future lending by banks or investors could result in higher interest rates on future debt obligations or could restrict our ability to obtain sufficient financing to meet our long-term operational and capital needs.

We are exposed to the credit risks of our customers, and a general increase in the nonpayment and nonperformance by customers could have an adverse impact on our cash flows, results of operations and financial condition.

Our business is subject to risks of loss resulting from nonpayment or nonperformance by our customers. Certain of our customers finance their activities through cash flow from operations, the incurrence of debt or the issuance of equity. In an economic downturn, commodity prices typically decline, and the credit markets and availability of credit can be expected to be constrained. Additionally, certain of our customers' equity values could decline. The combination of lower cash flow due to commodity prices, a reduction in borrowing bases under reserve-based credit facilities and the lack of available debt or equity financing may result in a significant reduction in our customers' liquidity and ability to pay or otherwise perform on their obligations to us. Furthermore, some of our customers may be highly leveraged and subject to their own operating and regulatory risks, which increases the risk that they may default on their obligations to us. Any increase in the nonpayment and nonperformance by our customers could have an adverse impact on our operating results and could adversely affect our liquidity.

Our backlog is subject to unexpected adjustments and cancellations and is, therefore, an uncertain indicator of our future revenues and earnings.

The revenues projected in our backlog may not be realized or, if realized, may not result in profits. All of the projects currently included in our backlog are subject to change and/or termination at the option of the customer. In the case of a change or termination, the customer is generally required to pay us for work performed and other costs necessarily incurred as a result of the change or termination.

We can give no assurance that our backlog will remain at current levels. Sales of our products are affected by prices for oil and natural gas, which have fluctuated significantly and may continue to do so in the future. Contracts denominated in foreign currency are also affected by changes in exchange rates, which may have a negative impact on our backlog. When drilling and production levels are depressed, a customer may no longer need the equipment or services currently under contract or may be able to obtain comparable equipment or services at lower prices. As a result, customers may exercise their termination rights or attempt to renegotiate contract terms. Continued declines in oil and natural gas prices could also reduce new customer orders, possibly causing a decline in our future backlog. If we experience significant project terminations, suspensions or scope adjustments to contracts reflected in our backlog, our financial condition, results of operations and cash flows may be adversely impacted.

Impairment in the carrying value of long-lived and indefinite intangible assets and goodwill could negatively affect our operating results.

We evaluate our property and equipment for impairment whenever changes in circumstances indicate that the carrying amount of an asset may not be recoverable, and we could incur additional impairment charges related to the carrying value of our long lived assets. In connection with our preparation and review of financial statements for the quarter ended September 30, 2017, after considering current Brent crude (Brent) consensus forecasts and expected rig counts for the foreseeable future, we determined the carrying amount of certain of our long-lived assets in the Western Hemisphere exceeded the fair values of such assets due to projected declines in asset utilization, and that the cost of some of our worldwide inventory exceeded its market value. As a result, we recorded corresponding impairments and other charges. Primarily as a result of the factors described above, we recorded charges of approximately \$33.6 million related to inventory and \$27.4 million related to fixed assets. No additional impairments were recorded during the three months ended December 31, 2017. Additionally, no impairments of long-lived assets were recorded in 2016 or 2015.

For goodwill and intangible assets with indefinite lives, an assessment for impairment is performed annually or when there is an indication an impairment may have occurred. We typically complete our annual impairment test for goodwill and other indefinite-lived intangibles using an assessment date of October 1. Goodwill is reviewed for impairment by comparing the carrying value of each of our three reporting units' net assets, including allocated goodwill, to the estimated fair value of the reporting unit. We determine the fair value of our reporting units using a discounted cash flow approach. We selected this valuation approach because we believe it, combined with our best judgment regarding underlying assumptions and estimates, provides the best estimate of fair value for each of our reporting units. Determining the fair value of a reporting unit requires

the use of estimates and assumptions. Such estimates and assumptions include revenue growth rates, future operating margins, the weighted average cost of capital, a terminal growth value and future market conditions, among others. We believe that the estimates and assumptions used in our impairment assessments are reasonable. If the reporting unit's carrying value is greater than its calculated fair value, we recognize a goodwill impairment charge for the amount by which the carrying value of goodwill exceeds its calculated fair value.

At October 1, 2017, we performed our annual impairment test on each of our reporting units and concluded that there had been no impairment because the estimated fair values of each of those reporting units exceeded its carrying value. Relevant events and circumstances that could have a negative impact on goodwill include: macroeconomic conditions; industry and market conditions, such as commodity prices; operating cost factors; overall financial performance; the impact of dispositions and acquisitions; and other entity-specific events. Further declines in commodity prices or sustained lower valuation for the Company's common stock could indicate a reduction in the estimate of reporting unit fair value, which, in turn, could lead to an impairment of reporting unit goodwill.

At October 1, 2017, we also performed our annual impairment test on our intangible assets with indefinite lives and concluded that there had been no impairment because the estimated fair value of each of the trademarks exceeded its carrying value.

In 2016, crude oil prices remained significantly below the levels of recent years. Although the prices have experienced some recovery in 2017, continued weakness or volatility in market conditions may further deteriorate the financial performance or future projections for our operating segments from current levels, which may result in an impairment of goodwill or indefinite-lived intangible assets and negatively impact our financial results in the period of impairment.

Our international operations expose us to instability and changes in economic and political conditions and other risks inherent to international business, which could have a material adverse effect on our results of operations, financial position or cash flows.

We have substantial international operations, with approximately 55% of our revenues derived from foreign sales in 2017, 66% in 2016 and 63% in 2015. We operate our business and market our products and services in many of the significant oil and gas producing areas in the world and are, therefore, subject to the risks customarily attendant to international operations and investments in foreign countries. Risks associated with our international operations include:

- volatility in general economic, social and political conditions;
- terrorist threats or acts, war and civil disturbances;
- expropriation or nationalization of assets;
- renegotiation or nullification of existing contracts;
- foreign taxation, including changes in laws or differing interpretations of existing laws;
- assaults on property or personnel;
- restrictive action by local governments;
- foreign and domestic monetary policies;
- limitations on repatriation of earnings;
- travel limitations or operational problems caused by public health threats; and
- changes in currency exchange rates.

Any of these risks could have an adverse effect on our ability to manufacture products abroad or the demand for our products and services in some locations. To date, we have not experienced any significant problems in foreign countries arising from local government actions or political instability, but there is no assurance that such problems will not arise in the future. Interruption of our international operations could have a material adverse effect on our overall operations.

Our international operations require us to comply with a number of U.S. and foreign regulations governing the international trade of goods, services and technology, which expose us to compliance risks.

Doing business on a worldwide basis exposes us and our subsidiaries to risks inherent in complying with the laws and regulations of a number of different nations, including various anti-bribery laws. We do business and have operations in a number of developing countries that have relatively underdeveloped legal and regulatory systems compared to more developed countries. Several of these countries are generally perceived as presenting a higher than normal risk of corruption, or as having a culture in which requests for improper payments are not discouraged. As a result, we may be subject to risks under the U.S. Foreign Corrupt Practices Act, the United Kingdom's Bribery Act of 2010 and similar laws in other countries that generally

prohibit companies and their representatives from making, offering or authorizing improper payments to government officials for the purpose of obtaining or retaining business. We have adopted policies and procedures, including our Code of Business Conduct and Ethical Practices, which are designed to promote compliance with such laws. However, maintaining and administering an effective compliance program under applicable anti-bribery laws in developing countries presents greater challenges than is the case in more developed countries.

In addition, the movement of goods, services and technology subjects us to complex legal regimes governing international trade. Our import activities are governed by unique tariff and customs laws and regulations in each of the countries where we operate. Further, many of the countries in which we do business maintain controls on the export or reexport of certain goods, services and technology, as well as economic sanctions that prohibit or restrict business activities in, with or involving certain persons, entities or countries. These laws and regulations concerning import and export activity, including their recordkeeping and reporting requirements, are complex and frequently changing. Moreover, they may be adopted, enacted, amended, enforced or interpreted in a manner that could materially impact our operations.

The precautions we take to prevent and detect misconduct, fraud or non-compliance with applicable laws and regulations governing international trade, including anti-bribery laws, may not be able to prevent such occurrences, and we could face unknown risks or losses. Our failure to comply with applicable laws or regulations or acts of misconduct could subject us to criminal or civil penalties, such as fines, imprisonment, sanctions, debarment from government contracts, seizure of shipments and loss of import and export privileges. In addition, actual or alleged violations of such laws and regulations could be expensive and consume significant time and attention of senior management to investigate and resolve, as well as damage our reputation and ability to do business, any of which could have a material adverse effect on our business and our results of operations, financial position and cash flows. We are also subject to the risks that our employees, agents and other representatives may act or fail to act in violation of such laws or regulations or our compliance policies and procedures.

Tax reform in the United States may have adverse effects on our financial position.

On December 22, 2017, the Tax Cuts and Jobs Act was enacted ("US Tax Reform"). US Tax Reform includes a number of changes that will impact our business. These changes include a reduction in the corporate tax rate from 35% to 21% starting in 2018, the elimination or reduction of certain domestic deductions and credits and limitations on the deductibility of interest expense and executive compensation. US Tax Reform also transitions U.S. international taxation from a worldwide tax system to a modified territorial system, which includes base erosion prevention measures on non-U.S. earnings, which may have the effect of subjecting certain earnings of our foreign subsidiaries to U.S. taxation stemming from guidelines such as Global Low Tax Intangible Income (GILTI). The US Tax Reform also includes a one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017.

US Tax Reform also provides for the acceleration of depreciation for certain assets placed into service after September 27, 2017 as well as prospective changes beginning in 2018, including repeal of the domestic manufacturing deduction. Changes in corporate tax rates, the taxation of foreign earnings and the deductibility of expenses will have a material impact on the recoverability of our deferred tax assets, and result in significant one-time charges in the period in which tax reform is enacted and result in an increase of the Company's effective tax rate in 2017. Depending on the relative amounts of pre-tax earnings in the United States compared to other countries, US Tax Reform may adversely affect our results of operations.

Going forward, the provisions of US Tax Reform are expected to reduce the Company's effective tax rate in 2018. It is important to note that the ultimate impact on the Company's effective tax rate will largely depend on the percentage of pretax earnings that is generated in the US as compared to the rest of the world.

Based on current guidance provided by US Tax Reform re-measurement of the deferred tax assets have been provisionally taken to reflect the change in corporate tax rates. In addition to this, an estimated provisional reserve has been established for the one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017. We view these reserves as preliminary as the full interpretation of US Tax Reform legislation is still underway.

Depending on the relative amounts of pre-tax earnings in the United States compared to other countries, US Tax Reform may adversely affect our results of operations.

We are subject to taxation in many jurisdictions and there are inherent uncertainties in the final determination of our tax liabilities.

As a result of our international operations, we are subject to taxation in many jurisdictions. Accordingly, our effective income tax rate and other tax obligations in the future could be adversely affected by a number of factors, including changes in the mix of earnings in countries with differing statutory tax rates, changes in the valuation of deferred tax assets and liabilities, disagreements with taxing authorities with respect to the interpretation of tax laws and regulations and changes in tax laws. In particular, foreign income tax returns of foreign subsidiaries and related entities are routinely examined by foreign tax authorities, and these tax examinations may result in assessments of additional taxes, interest or penalties. Refer to "Item 3. Legal Proceedings" regarding tax assessments in Brazil. We regularly assess all of these matters to determine the adequacy of

our tax provision, which is subject to discretion. If our assessments are incorrect, it could have an adverse effect on our business and financial condition.

Moreover, the United States Congress, the Organization for Economic Co-operation and Development and other government agencies in the other jurisdictions where we and our subsidiaries do business have had an extended focus on issues related to the taxation of multinational corporations. One example is in the area of "base erosion and profit shifting," where payments are made between affiliates from a jurisdiction with high tax rates to a jurisdiction with lower tax rates. As a result, the tax laws in the United States and other countries in which we and our subsidiaries do business could change on a prospective or retroactive basis, and such changes could adversely affect us.

Our excess cash is invested in various financial instruments which may subject us to potential losses.

We invest excess cash in various financial instruments including interest bearing accounts, money market mutual funds and funds which invest in U.S. Treasury obligations and repurchase agreements backed by U.S. Treasury obligations. However, changes in the financial markets, including interest rates, as well as the performance of the issuers, can affect the market value of our short-term investments.

We may suffer losses as a result of foreign currency fluctuations and limitations on the ability to repatriate income or capital to the United States.

We conduct a portion of our business in currencies other than the U. S. dollar, and our operations are subject to fluctuations in foreign currency exchange rates. We cannot assure you that we will be able to protect the Company against such fluctuations in the future. Further, we cannot assure you that the countries in which we currently operate will not adopt policies limiting repatriation of earnings in the future.

Our foreign subsidiaries also hold significant amounts of cash that may be subject to both U.S. income taxes (subject to adjustment for foreign tax credits) and withholding taxes of the applicable foreign country if we repatriate that cash to the United States.

Our business involves numerous operating hazards that may not be covered by insurance. The occurrence of an event not fully covered by insurance could have a material adverse effect on our results of operations, financial position and cash flows.

Our products are used in potentially hazardous drilling, completion and production applications that can cause personal injury, product liability and environmental claims. In addition, certain areas where our products are used, including in and near the U.S. Gulf of Mexico, are close to high population areas and subject to hurricanes and other extreme weather conditions on a relatively frequent basis. A catastrophic occurrence at a location where our equipment and/or services are used may expose us to substantial liability for personal injury, wrongful death, product liability, environmental damage or commercial claims. Our general liability insurance program includes an aggregate coverage limit of \$200 million for claims with respect to property damage, injury or death and pollution. However, our insurance policies may not cover fines, penalties or costs and expenses related to government-mandated cleanup of pollution. In addition, our insurance does not provide coverage for all liabilities, and we cannot assure you that our insurance coverage will be adequate to cover claims that may arise or that we will be able to maintain adequate insurance at rates we consider reasonable. The occurrence of an event not fully covered by insurance could have a material adverse effect on our results of operations, financial position and cash flows.

We attempt to further limit our liability through contractual indemnification provisions with our customers. We generally seek to enter into contracts for the provision of our products and services that provide for (1) the responsibility of each party to the contract for personal injuries to, or the death of, its employees and damages to its property, (2) cross-indemnification with other contractors providing products and/or services to the other party to the contract with respect to personal injury, death and property damage and (3) the operator being responsible for claims brought by third parties for personal injury, death, property loss or damage relating to pollution or other well control events. We may not be able to successfully obtain favorable contractual provisions, and a failure to do so may increase our risks and costs, which could materially impact our results of operations. In addition, we cannot assure you that any party that is contractually obligated to indemnify us will be financially able to do so.

We may lose money on fixed-price contracts.

A portion of our business consists of the designing, manufacturing and selling of our equipment for major projects pursuant to competitive bids, and is performed on a fixed-price basis. Under these contracts, we are typically responsible for all cost overruns, other than the amount of any cost overruns resulting from requested changes in order specifications. Our actual costs and any gross profit realized on these fixed-price contracts may vary from the estimated amounts on which these contracts were originally based. This may occur for various reasons, including:

- errors in estimates or bidding;
- · changes in availability and cost of labor and materials;
- variations in productivity from our original estimates; and
- material changes in foreign currency exchange rates.

These variations and the risks inherent in our projects may result in reduced profitability or losses on projects. Depending on the size of a project, variations from estimated contract performance could have a material adverse impact on our operating results.

Our business could be adversely affected if we do not develop new products and secure and retain patents related to our products.

Technology is an important component of our business and growth strategy, and our success as a company depends to a significant extent on the development and implementation of new product designs and improvements. Whether we can continue to develop systems and services and related technologies to meet evolving industry requirements and, if so, at prices acceptable to our customers will be significant factors in determining our ability to compete in the industry in which we operate. Many of our competitors are large multinational companies that may have significantly greater financial resources than we have, and they may be able to devote greater resources to research and development of new systems, services and technologies than we are able to do.

Our ability to compete effectively will also depend on our ability to continue to obtain patents on our proprietary technology and products. Although we do not consider any single patent to be material to our business as a whole, the inability to protect our future innovations through patents could have a material adverse effect.

We may be required to recognize a charge against current earnings because of percentage-of-completion accounting.

Revenues and profits on long-term project contracts are recognized on a percentage-of-completion basis. We calculate the percent complete and apply the percentage to determine revenues earned and the appropriate portion of total estimated costs. Accordingly, purchase order price and cost estimates are reviewed periodically as the work progresses, and adjustments proportionate to the percentage complete are reflected in the period when such estimates are revised. To the extent that these adjustments result in a reduction or elimination of previously reported profits, we would have to recognize a charge against current earnings, which could be significant depending on the size of the project or the adjustment.

Loss of our key management or other personnel could adversely impact our business.

We depend on the services of Blake DeBerry, President and Chief Executive Officer, and James Gariepy, Senior Vice President and Chief Operating Officer. Together, Mr. DeBerry and Mr. Gariepy have over 40 years with the Company and approximately 70 years of relevant industry experience. The loss of either of these officers could have a material adverse effect on our results of operations, financial position and cash flows.

In addition, competition for skilled machinists, fabricators and technical personnel among companies that rely heavily on engineering and technology is intense, and the loss of qualified employees or an inability to attract, retain and motivate additional highly skilled employees required for the operation and expansion of our business could hinder our ability to conduct research activities successfully and develop and produce marketable products and services. A significant increase in the wages paid by competing employers could result in a reduction of our skilled labor force, increase in the wage rates paid by us or both. If either of these events were to occur, in the near-term, the profits realized by us from work in progress would be reduced and, in the long-term, our production capacity and profitability could be diminished and our growth potential could be impaired.

Acquisitions, dispositions and investments may not result in anticipated benefits and may present risks not originally contemplated, which could have a material adverse effect on our financial condition, results of operations and cash flows.

From time to time, we evaluate purchases and sales of assets, businesses or other investments. These transactions may not result in the anticipated realization of savings, creation of efficiencies, offering of new products or services, generation of cash or income or reduction of risk. In addition, acquisitions may be financed by borrowings, requiring us to incur debt, or by the issuance of our common stock. These transactions involve numerous risks, and we cannot ensure that:

- any acquisition would be successfully integrated into our operations and internal controls;
- the due diligence conducted prior to an acquisition would uncover situations that could result in financial or legal exposure;
- the use of cash for acquisitions would not adversely affect our cash available for capital expenditures and other uses;
- any disposition, investment, acquisition or integration would not divert management resources from the operation of our business; or
- any disposition, investment, acquisition or integration would not have a material adverse effect on our financial condition, results of operations or cash flows.

Restrictions in the agreement governing the New Asset Backed Loan (ABL) Credit Facility could adversely affect our business, financial condition and results of operations.

The operating and financial restrictions in the New ABL Credit Facility and any future financing agreements could restrict our ability to finance future operations or capital needs, or otherwise pursue our business activities. For example, the New ABL Credit Facility limits our and our subsidiaries' ability to, among other things:

- incur additional debt or issue guarantees;
- incur or permit certain liens to exist;
- make certain investments, acquisitions or other restricted payments;
- · dispose of assets;
- engage in certain types of transactions with affiliates;
- merge, consolidate or transfer all or substantially all of our assets; and
- prepay certain indebtedness.

Furthermore, the New ABL Credit Facility contains a covenant requiring us to maintain a fixed charge coverage ratio of 1.0 to 1.0 based on the ratio of consolidated EBITDA to fixed charges when availability under the New ABL Credit Facility falls below the greater of \$10 million and 15% of the lesser of the borrowing base and aggregate commitments.

In addition, any borrowings under the New ABL Credit Facility may be at variable rates of interest that expose us to interest rate risk. If interest rates increase, our debt service obligations on the variable rate indebtedness will increase even though the amount borrowed will remain the same, and our net income and cash flows will correspondingly decrease.

A failure to comply with the covenants in the agreement governing the New ABL Credit Facility could result in an event of default, which, if not cured or waived, would permit the exercise of remedies against us that could have a material adverse effect on our business, results of operations and financial position. Remedies under the New ABL Credit Facility include foreclosure on the collateral securing the indebtedness and termination of the commitments under the New ABL Credit Facility, and any outstanding borrowings under the New ABL Credit Facility may be declared immediately due and payable.

Our operations and our customers' operations are subject to a variety of governmental laws and regulations that may increase our costs, limit the demand for our products and services or restrict our operations.

Our business and our customers' businesses may be significantly affected by:

- federal, state, local and foreign laws and other regulations relating to the oilfield operations, worker safety and the protection of the environment;
- changes in these laws and regulations;
- · levels of enforcement of these laws and regulations; and
- interpretation of existing laws and regulations.

In addition, we depend on the demand for our products and services from the oil and gas industry. This demand is affected by changing taxes, price controls and other laws and regulations relating to the oil and gas industry in general, including those specifically directed to offshore operations. For example, the adoption of laws and regulations curtailing exploration and development drilling for oil and gas for economic or other policy reasons could adversely affect our operations by limiting demand for our products. We cannot determine the extent to which our future operations and earnings may be affected by new legislation, new regulations or changes in existing regulations and enforcement thereof.

Various new regulations intended to improve particularly offshore safety systems and environmental protection have been issued since 2010 that have increased the complexity of the drilling permit process and may limit the opportunity for some operators to continue deepwater drilling in the U.S. Gulf of Mexico, which could adversely affect the Company's financial operations. Third-party challenges to industry operations in the U.S. Gulf of Mexico may also serve to further delay or restrict activities. If the new regulations, policies, operating procedures and possibility of increased legal liability are viewed by our current or future customers as a significant impairment to expected profitability on projects, they could discontinue or curtail their operations, thereby adversely affecting our financial operations by decreasing demand for our products.

Because of our foreign operations and sales, we are also subject to changes in foreign laws and regulations that may encourage or require hiring of local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction. If we fail to comply with any applicable law or regulation, our business, results of operations, financial position and cash flows may be adversely affected.

Our businesses and our customers' businesses are subject to environmental laws and regulations that may increase our costs, limit the demand for our products and services or restrict our operations.

Our operations and the operations of our customers are also subject to federal, state, local and foreign laws and regulations relating to the protection of human health and the environment. These environmental laws and regulations affect the products and services we design, market and sell, as well as the facilities where we manufacture our products. For example, our operations are subject to numerous and complex laws and regulations that, among other things, may regulate the management and disposal of hazardous and non-hazardous wastes; require acquisition of environmental permits related to our operations; restrict the types, quantities and concentrations of various materials that can be released into the environment; limit or prohibit operation activities in certain ecologically sensitive and other protected areas; regulate specific health and safety criteria addressing worker protection; require compliance with operational and equipment standards; impose testing, reporting and record-keeping requirements; and require remedial measures to mitigate pollution from former and ongoing operations. We are required to invest financial and managerial resources to comply with such environmental, health and safety laws and regulations and anticipate that we will continue to be required to do so in the future. In addition, environmental laws and regulations could limit our customers' exploration and production activities. These laws and regulations change frequently, which makes it impossible for us to predict their cost or impact on our future operations. For example, legislation to regulate emissions of greenhouse gases has been introduced, but not enacted, in the U.S. Congress, and there has been a wide-ranging policy debate, both nationally and internationally, regarding the impact of these gases and possible means for their regulation. In addition, efforts have been made and continue to be made in the international community toward the adoption of international treaties or protocols that would address global climate change issues, such as the annual United Nations Climate Change Conferences, including the United Nations Climate Change Conference in Paris (COP 21) in November 2015, which resulted in the creation of the Paris Agreement. The Paris Agreement, signed by the U.S. on April 22, 2016, requires countries to review and "represent a progression" in their nationally determined contributions, which set greenhouse gas emission reduction goals, every five years. However, in August 2017, the United States informed the United Nations of its intent to withdraw from the Paris Agreement. The earliest possible effective withdrawal date from the Paris Agreement is November 2020. Also, the EPA has undertaken efforts to collect information regarding greenhouse gas emissions and their effects. Following a finding by the EPA that certain greenhouse gases represent a danger to human health, the EPA has expanded its regulations relating to those emissions and has adopted rules imposing permitting and reporting obligations. The results of the permitting and reporting requirements could lead to further regulation of these greenhouse gases by the EPA. Subsequent to the Paris Agreement, there has been no significant legislative progress in cap and trade proposals or greenhouse gas emission reductions. The adoption of legislation or regulatory programs to reduce greenhouse gas emissions could also increase the cost of consuming, and thereby reduce demand for, the hydrocarbons that our customers produce. Consequently, such legislation or regulatory programs could have an adverse effect on our financial condition and results of operations. It is too early to determine whether, or in what form, further regulatory action regarding greenhouse gas emissions will be adopted or what specific impact a new regulatory action might have on us or our customers. Generally, the anticipated regulatory actions do not appear to affect us in any material respect that is different, or to any materially greater or lesser extent, than other companies that are our competitors. However, our business and prospects could be adversely affected to the extent laws are enacted or modified or other governmental action is taken that prohibits or restricts our customers' exploration and production activities or imposes environmental protection requirements that result in increased costs to us or our customers.

Environmental laws may provide for "strict liability" for damages to natural resources or threats to public health and safety, rendering a party liable for environmental damage without regard to negligence or fault on the part of such party. Sanctions for noncompliance may include revocation of permits, corrective action orders, administrative or civil penalties and criminal prosecution. Some environmental laws and regulations provide for joint and several strict liability for remediation of spills and releases of hazardous substances. In addition, we may be subject to claims alleging personal injury or property damage as a result of alleged exposure to hazardous substances, as well as damage to natural resources. These laws and regulations also may expose us to liability for the conduct of or conditions caused by others, or for our acts that were in compliance with all applicable laws and regulations at the time such acts were performed. Any of these laws and regulations could result in claims, fines or expenditures that could be material to results of operations, financial position and cash flows.

Our business could be adversely affected by a failure or breach of our information technology systems.

Our business operations depend on our information technology (IT) systems. Despite our security and back-up measures, our IT systems are vulnerable to computer viruses, natural disasters and other disruptions or failures. The failure of our IT systems to perform as anticipated for any reason or any significant breach of security could disrupt our business and result in numerous adverse consequences, including reduced effectiveness and efficiency of our operations and those of our customers, inappropriate disclosure of confidential information, increased overhead costs, loss of intellectual property and damage to our reputation, which could have a material adverse effect on our business and results of operations. In addition, we may be required to incur significant costs to prevent or respond to damage caused by these disruptions or security breaches in the future.

The market price of our common stock may be volatile.

The trading price of our common stock and the price at which we may sell common stock in the future are subject to large fluctuations in response to any of the following:

- limited trading volume in our common stock;
- quarterly variations in operating results;
- general financial market conditions;
- the prices of natural gas and oil;
- announcements by us and our competitors;
- our liquidity;
- changes in government regulations;
- our ability to raise additional funds;
- · our involvement in litigation; and
- other events.

We do not anticipate paving dividends on our common stock in the near future.

We have not paid any dividends in the past and do not intend to pay cash dividends on our common stock in the foreseeable future. Our Board of Directors reviews this policy on a regular basis in light of our earnings, financial position and market opportunities. We currently intend to retain any earnings for the future operation and development of our business as well as potential stock repurchases or acquisition opportunities.

Provisions in our corporate documents and Delaware law could delay or prevent a change in control of the Company, even if that change would be beneficial to our stockholders.

The existence of some provisions in our corporate documents and Delaware law could delay or prevent a change in control of our company, even if that change would be beneficial to our stockholders. Our certificate of incorporation and bylaws contain provisions that may make acquiring control of our company difficult, including:

- provisions relating to the classification, nomination and removal of our directors;
- provisions regulating the ability of our stockholders to bring matters for action at annual meetings of our stockholders;
- provisions requiring the approval of the holders of at least 80% of our voting stock for a broad range of business combination transactions with related persons; and
- the authorization given to our Board of Directors to issue and set the terms of preferred stock.

In addition, the Delaware General Corporation Law imposes restrictions on mergers and other business combinations between us and any holder of 15% or more of our outstanding common stock.

Item 1B. Unresolved Staff Comments

^{*}These facilities are owned; all other facilities are leased.

The Company also performs sales, service and reconditioning activities at its facilities in Houston, Youngsville, Alberta, Aberdeen, Singapore and Macae. For additional information on our manufacturing facilities, see "Item 1. Business - General".

Item 3. Legal Proceedings

Brazilian Tax Issue

From 2002 to 2007, the Company's Brazilian subsidiary imported goods through the State of Espirito Santo in Brazil and subsequently transferred them to its facility in the State of Rio de Janeiro. During that period, the Company's Brazilian subsidiary paid taxes to the State of Espirito Santo on its imports. Upon the final sale of these goods, the Company's Brazilian subsidiary collected taxes from customers and remitted them to the State of Rio de Janeiro net of the taxes paid on importation of those goods to the State of Espirito Santo in accordance with the Company's understanding of Brazilian tax laws.

In August 2007, the State of Rio de Janeiro served the Company's Brazilian subsidiary with assessments to collect a state tax on the importation of goods through the State of Espirito Santo from 2002 to 2007 claiming that these taxes were due and payable to it under applicable law. The Company settled these assessments with payments to the State of Rio de Janeiro of \$12.2 million in March 2010 and \$3.9 million in December 2010. Approximately \$7.8 million of these settlement payments were attributable to penalties, interest and amounts that had expired under the statute of limitations so that amount was recorded as an expense. The remainder of the settlement payments generated credits (recorded as a long-term prepaid tax) to be used to offset future state taxes on sales to customers in the State of Rio de Janeiro, subject to certification by the tax authorities. During the second quarter of 2015, the tax authorities certified approximately \$8.3 million of those credits paid in 2010 and granted an additional \$2.3 million in inflation-related credits. The additional amount of credits granted by the tax authorities increased long-term prepaid taxes and decreased selling, general and administrative expenses by \$2.3 million.

In December 2010 and January 2011, the Company's Brazilian subsidiary was served with two additional assessments totaling approximately \$13.0 million from the State of Rio de Janeiro to cancel the credits associated with the tax payments to the State of Espirito Santo (Santo Credits) on the importation of goods from July 2005 to October 2007. The Santo Credits are not related to the credits described above. The Company has objected to these assessments on the grounds that they would represent double taxation on the importation of the same goods and that the Company is entitled to the credits under applicable Brazilian law. With regard to the December 2010 assessment, the Company's Brazilian subsidiary filed an appeal with a State of Rio de Janeiro judicial court to annul the tax assessment following a ruling against the Company by the tax administration's highest council. In connection with that appeal, the Company was required to deposit with the court approximately \$3.1 million in December 2014 as the full amount of the assessment with penalties and interest. The Company filed a similar appeal in the judicial system with regard to the January 2011 assessment and was required to deposit with the court approximately \$5.7 million in December 2016. The Company believes that these credits are valid and that success in the judicial court process is probable. Based upon this analysis, the Company has not accrued any liability in conjunction with this matter.

Since 2007, the Company's Brazilian subsidiary has paid taxes on the importation of goods directly to the State of Rio de Janeiro and the Company does not expect any similar issues to exist for periods subsequent to 2007.

For a further description of the Company's legal proceedings, see "Commitments and Contingencies," Note 13 of Notes to Consolidated Financial Statements. The Company also is involved in a number of legal actions arising in the ordinary course of business. Although no assurance can be given with respect to the ultimate outcome of such legal actions, in the opinion of management, the ultimate liability with respect thereto will not have a material adverse effect on the Company's results of operations, financial position or cash flows.

Item 4. Mine Safety Disclosure

Not applicable.

Item 5. Market for Registrant's Common Stock, Related Stockholder Matters and Issuer Purchases of Equity Securities

The Company's common stock is publicly traded on the New York Stock Exchange under the symbol DRQ. The following table sets forth the quarterly high and low sales prices of the common stock as reported on the New York Stock Exchange for the indicated quarters of fiscal years 2017 and 2016.

Sales Price (\$)

	2017			20	16		
Quarter Ended		High		Low	High		Low
March 31	\$	67.95	\$	50.85	\$ 61.80	\$	48.88
June 30		55.25		47.75	66.73		56.24
September 30		52.53		35.85	59.89		50.13
December 31		50.40		37.35	69.40		46.90

There were approximately 116 stockholders of record of the Company's common stock as of December 31, 2017. This number includes the Company's employees and directors that hold shares, but does not include the number of security holders for whom shares are held in a "nominee" or "street" name.

The Company has not paid any dividends in the past and does not currently anticipate paying any dividends in the foreseeable future. The Company intends to reinvest any retained earnings for the future operation and development of its business, or to use for potential stock repurchases or acquisition opportunities. The Board of Directors will review this policy on a regular basis in light of the Company's earnings, financial position, market opportunities and restrictions under the New ABL Credit Facility.

Information concerning securities authorized for issuance under equity compensation plans is included in Note 16 of Notes to Consolidated Financial Statements.

Repurchase of Equity Securities

On July 26, 2016, the Board of Directors authorized a stock repurchase plan under which the Company can repurchase up to \$100 million of its common stock. The repurchase plan has no set expiration date. No repurchases have been made pursuant to this plan as of December 31, 2017.

Item 6. Selected Financial Data

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following is management's discussion and analysis of certain significant factors that have affected aspects of the Company's financial position, results of operations, comprehensive income and cash flows during the periods included in the accompanying consolidated financial statements. This discussion should be read in conjunction with the Company's consolidated financial statements and notes thereto presented elsewhere in this report.

Overview

Dril-Quip designs, manufactures, sells and services highly engineered drilling and production equipment that is well suited primarily for use in deepwater, harsh environment and severe service applications. Dril-Quip's products are used by major integrated, large independent and foreign national oil and gas companies and drilling contractors throughout the world. The Company's principal products consist of subsea and surface wellheads, subsea and surface production trees, subsea control systems and manifolds, mudline hanger systems, specialty connectors and associated pipe, drilling and production riser systems, liner hangers, wellhead connectors, diverters and safety valves. Dril-Quip also provides technical advisory assistance on an as-requested basis during installation of its products, as well as rework and reconditioning services for customer-owned Dril-Quip products. In addition, Dril-Quip's customers may rent or purchase running tools from the Company for use in the installation and retrieval of the Company's products.

Oil and Gas Prices

Both the market for drilling and production equipment and services and the Company's business are substantially dependent on the condition of the oil and gas industry and, in particular, the willingness of oil and gas companies to make capital expenditures on exploration, drilling and production operations. Oil and gas prices and the level of drilling and production activity have historically been characterized by significant volatility. See "Item 1A. Risk Factors—A material or extended decline in expenditures by the oil and gas industry could significantly reduce our revenue and income."

During 2017, Brent crude oil prices averaged \$54.15 per barrel compared to \$43.67 per barrel in 2016 and \$52.32 per barrel in 2015. According to the January 2018 release of the Short-Term Energy Outlook published by the EIA, Brent crude oil prices are projected to average \$59.74 per barrel in 2018 and \$61.43 in 2019. The International Energy Agency projected the global oil demand to grow by approximately 1.3 million barrels per day to a total of 99.1 million barrels per day in 2018 based on its January 2018 Oil Market Report.

Rig Count

Detailed below is the average contracted offshore rig count (rigs currently drilling as well as rigs committed, but not yet drilling) for the Company's geographic regions for the years ended December 31, 2017, 2016 and 2015. The rig count data includes floating rigs (semi-submersibles and drillships) and jack-up rigs. The Company has included only these types of rigs as they are the primary assets used to deploy the Company's products.

	201	7	2010	6	2015		
	Floating Rigs	Jack-up Rigs	Floating Rigs	Jack-up Rigs	Floating Rigs	Jack-up Rigs	
Western Hemisphere	58	41	83	43	115	66	
Eastern Hemisphere	56	60	62	65	85	84	
Asia Pacifi	34	222	29	221	39	248	
Total	148	323	174	329	239	398	

Source: IHS—Petrodata RigBase—December 31, 2017, 2016 and 2015

According to IHS-Petrodata RigBase, as of December 31, 2017, there were 471 rigs contracted for the Company's geographic regions (148 floating rigs and 323 jack-up rigs), which represents a 2.2% increase from the rig count of 461 rigs (151 floating rigs and 310 jack-up rigs) as of December 31, 2016. The December 31, 2016 rig count represented a 20.4% decrease from the rig count on December 31, 2015 of 579 rigs (217 floating rigs and 362 jack-up rigs).

The Company believes that the number of rigs (semi-submersibles, drillships and jack-up rigs) under construction impacts its backlog and resulting revenues because in certain cases, its customers order some of the Company's products during the construction of such rigs. As a result, an increase in rig construction activity tends to favorably impact the Company's backlog while a decrease in rig construction activity tends to negatively impact the Company's backlog. According to IHS-Petrodata RigBase, at the end of 2017, 2016 and 2015, there were 138, 152 and 198 rigs, respectively, under construction. The expected delivery dates for the rigs under construction on December 31, 2017 are as follows:

	Floating Rigs	Jack-up Rigs	Total
2018	22	67	89
2019	14	21	35
2020	6	7	13
2021	1	0	1
Total	43	95	138

However, given the sustained low level of oil and gas prices and oversupply of offshore drilling rigs, the Company believes it is possible that delivery of some rigs under construction could be postponed or cancelled, limiting the opportunity for supply of the Company's products.

Regulation

The demand for the Company's products and services is also affected by laws and regulations relating to the oil and gas industry in general, including those specifically directed to offshore operations. The adoption of new laws and regulations, or changes to existing laws or regulations that curtail exploration and development drilling for oil and gas for economic or other policy reasons, could adversely affect the Company's operations by limiting demand for its products.

Business Environment

Oil and gas prices and the level of drilling and production activity have been characterized by significant volatility in recent years. Worldwide military, political, economic and other events have contributed to oil and natural gas price volatility and are likely to continue to do so in the future. Lower crude oil and natural gas prices have resulted in a trend of customers seeking to renegotiate contract terms with the Company, including reductions in the prices of its products and services, extensions of delivery terms and, in some instances, contract cancellations or revisions. In some cases, a customer may already hold an inventory of the Company's equipment, which may delay the placement of new orders. In addition, some of the Company's customers could experience liquidity or solvency issues or could otherwise be unable or unwilling to perform under a contract, which could ultimately lead a customer to enter bankruptcy or otherwise encourage a customer to seek to repudiate, cancel or renegotiate a contract. An extended period of reduced crude oil and natural gas prices may accelerate these trends. If the Company experiences significant contract terminations, suspensions or scope adjustments to its contracts, then its financial condition, results of operations and cash flows may be adversely impacted.

The Company expects continued pressure in both crude oil and natural gas prices, as well as in the level of drilling and production related activities, primarily as they relate to offshore activities. Even during periods of high prices for oil and natural gas, companies exploring for oil and gas may cancel or curtail programs, seek to renegotiate contract terms, including the price of products and services, or reduce their levels of capital expenditures for exploration and production for a variety of reasons. Lower drilling and production activity had a negative impact on the Company's results for the year ended December 31, 2017 and is expected to persist through 2018. A prolonged delay in the recovery of hydrocarbon prices could also lead to further material impairment charges to tangible or intangible assets or otherwise result in a material adverse effect on the Company's results of operations.

The Company operates its business and markets its products and services in most of the significant oil and gas producing areas in the world and is, therefore, subject to the risks customarily attendant to international operations and investments in foreign countries. These risks include nationalization, expropriation, war, acts of terrorism and civil disturbance, restrictive action by local governments, limitation on repatriation of earnings, change in foreign tax laws and change in currency exchange rates, any of which could have an adverse effect on either the Company's ability to manufacture its products in its facilities

abroad or the demand in certain regions for the Company's products or both. To date, the Company has not experienced any significant problems in foreign countries arising from local government actions or political instability, but there is no assurance that such problems will not arise in the future. Interruption of the Company's international operations could have a material adverse effect on its overall operations.

The June 23, 2016 referendum by British voters to exit the European Union (Brexit) adversely impacted global markets, including currencies, and resulted in a decline in the value of the British pound sterling, as compared to the U.S. dollar and other currencies. Volatility in exchange rates could be expected to continue in the short term as the United Kingdom (U.K.) negotiates its exit from the European Union. A weaker British pound sterling compared to the U.S. dollar during a reporting period would cause local currency results of the Company's U.K. operations to be translated into fewer U.S. dollars. Continued adverse consequences such as deterioration in economic conditions and volatility in currency exchange rates could have a negative impact on the Company's financial position and results of operations. See "Item 1A. Risk Factors—Our international operations expose us to instability and changes in economic and political conditions and other risks inherent to international business, which could have a material adverse effect on our results of operations, financial position or cash flows."

Revenues. Dril-Quip's revenues are generated from two sources: products and services. Product revenues are derived from the sale of drilling and production equipment. Service revenues are earned when the Company provides technical advisory assistance and rental tools during installation and retrieval of the Company's products. Additionally, the Company earns service revenues when rework and reconditioning services are provided. In 2017, the Company derived 77% of its revenues from the sale of its products and 23% of its revenues from services compared to 80% and 20% in 2016 and 81% and 19% in 2015, respectively. Service revenues generally correlate to revenues from product sales because increased product sales typically generate increased demand for technical advisory assistance services during installation and rental of running tools. The Company has substantial international operations, with approximately 55% of its revenues derived from foreign sales in 2017, 66% in 2016 and 63% in 2015. Substantially all of the Company's domestic revenue relates to operations in the U.S. Gulf of Mexico. Domestic revenue approximated 45% of the Company's total revenues in 2017, 34% in 2016 and 37% in 2015.

Product contracts are typically negotiated and sold separately from service contracts. In addition, service contracts are not typically included in the product contracts or related sales orders and are not offered to the customer as a condition of the sale of the Company's products. The demand for products and services is generally based on worldwide economic conditions in the oil and gas industry, and is not based on a specific relationship between the two types of contracts. Substantially all of the Company's sales are made on a purchase order basis. Purchase orders are subject to change and/or termination at the option of the customer. In case of a change or termination, the customer is required to pay the Company for work performed and other costs necessarily incurred as a result of the change or termination.

Generally, the Company attempts to raise its prices as its costs increase. However, the actual pricing of the Company's products and services is impacted by a number of factors, including global oil prices, competitive pricing pressure, the level of utilized capacity in the oil service sector, maintenance of market share, the introduction of new products and general market conditions.

The Company accounts for larger and more complex projects that have relatively longer manufacturing time frames on a percentage-of-completion basis. During 2017, there were eight projects that were accounted for using the percentage-of-completion method, which represented approximately 13% of the Company's total revenues and 16% of the Company's product revenues. During 2016, there were 10 projects that were accounted for using the percentage-of-completion method, which represented approximately 14% of the Company's total revenues and 17% of the Company's product revenues. During 2015, there were 14 projects that were accounted for using the percentage-of-completion method, which represented approximately 16% of the Company's total revenues and 19% of the Company's product revenues. These percentages may fluctuate in the future. Revenues accounted for in this manner are generally recognized based upon a calculation of the percentage complete, which is used to determine the revenue earned and the appropriate portion of total estimated cost of sales. Accordingly, price and cost estimates are reviewed periodically as the work progresses, and adjustments proportionate to the percentage complete are reflected in the period when such estimates are revised. Losses, if any, are recorded in full in the period they become known. Amounts received from customers in excess of revenues recognized are classified as a current liability. See "Item 1A. Risk Factors—We may be required to recognize a charge against current earnings because of percentage-of-completion accounting."

Cost of Sales. The principal elements of cost of sales are labor, raw materials and manufacturing overhead. Cost of sales as a percentage of revenues is influenced by the product mix sold in any particular period, costs from projects accounted for under the percentage-of-completion method, over/under manufacturing overhead absorption and market conditions. The Company's costs related to its foreign operations do not significantly differ from its domestic costs.

Selling, General and Administrative Expenses. Selling, general and administrative expenses include the costs associated with sales and marketing, general corporate overhead, business development expenses, compensation expense, stock-based compensation expense, legal expenses, foreign currency transaction gains and losses and other related administrative functions.

The Company's U.K. subsidiary, whose functional currency is the British pound sterling, conducts a portion of its operations in U.S. dollars. As a result, this subsidiary holds significant monetary assets denominated in U.S. dollars. These monetary assets are subject to changes in exchange rates between the U.S. dollar and the British pound sterling, which has resulted in pre-tax non-cash foreign currency losses during the year ended December 31, 2017 totaling \$8.3 million.

Engineering and Product Development Expenses. Engineering and product development expenses consist of new product development and testing, as well as application engineering related to customized products.

Impairment and Other Charges. Impairment and other charges consist of certain fixed asset and inventory write-downs of \$27.4 million and \$33.6 million, respectively, which occurred in connection with our preparation and review of financial statements for the quarter ended September 30, 2017. No additional impairment charges were recognized for the three months ended December 31, 2017. See Note 7 of the Notes to Consolidated Financial Statements for more detail.

Income Tax Provision. Income tax expense for 2017 was \$35.0 million on net loss before taxes of \$65.6 million, resulting in an effective income tax rate of approximately negative 53%. Income tax expense in 2016 was \$22.6 million on income before taxes of \$115.9 million, resulting in an effective tax rate of approximately 19.5%. The 2017 effective income tax rate is primarily impacted by the effects of US Tax Reform where estimated provisional reserves were established for the remeasurement of deferred tax assets, for the one-time transition tax, the recording of a valuation allowance against the net U.S. deferred tax assets as well as those in various foreign countries, and various credits and deductions in the U.K.

Going forward, the provisions of US Tax Reform are expected to reduce the Company's effective tax rate in 2018. It is important to note that the ultimate impact on the Company's effective tax rate will largely depend on the percentage of pretax earnings that is generated in the United States as compared to the rest of the world.

Results of Operations

The following table sets forth, for the periods indicated, certain consolidated statements of income data expressed as a percentage of revenues:

	Year Ended December 31,						
	2017	2016	2015				
Revenues:							
Products	77.1 %	80.4%	81.2%				
Services	22.9	19.6	18.8				
Total revenues	100.0	100.0	100.0				
Cost of sales:							
Products	54.0	49.8	45.4				
Services	13.0	11.1	9.0				
Total cost of sales	67.0	61.0	54.4				
Selling, general and administrative	25.5	9.9	10.5				
Engineering and product development	9.3	8.2	5.7				
Impairment and other charges	13.4	_					
Total costs and expenses	115.2 %	79.1%	70.5%				
Operating income	(15.1)	21.0	29.4				
Interest income	0.8	0.6	0.1				
Interest expense	_	_					
Income before income taxes	(14.3)	21.5	29.5				
Income tax provision	7.7	4.2	6.8				
Net income	(22.0)%	17.3%	22.7%				

The following table sets forth, for the periods indicated, a breakdown of our products and service revenues:

	Year Ended December 31,							
		2017		2016		2015		
			(In	millions)				
Revenues:								
Products:								
Subsea equipment	\$	291.2	\$	375.3	\$	601.9		
Downhole tools		33.4		6.9		5.0		
Surface equipment		14.5		16.7		25.6		
Offshore rig equipment		12.1		34.1		52.9		
Total products		351.2		433.0		685.4		
Services		104.3		105.7		158.9		
Total revenues	\$	455.6	\$	538.7	\$	844.3		

Year Ended December 31, 2017 Compared to Year Ended December 31, 2016

Revenues. Revenues decreased by \$83.3 million, or approximately 15%, to \$455.5 million in 2017 from \$538.7 million in 2016. The overall decrease in revenues was impacted by a 6.4% decrease in the average contracted offshore rig count (including floating and jack-up rigs) in 2017 as compared to 2016. Product revenues decreased by approximately \$81.9 million for the year ended December 31, 2017 compared to the same period in 2016 as a result of decreased revenues of \$84.2 million in subsea equipment, \$2.2 million in surface equipment and \$22.0 million in offshore rig equipment, partially offset by an increase in product revenues of \$26.5 million related to downhole tool sales. Product revenues decreased in the Western Hemisphere by \$37.3 million, in Asia Pacific by \$7.4 million and in the Eastern Hemisphere by \$37.2 million. The decreased revenues are largely due to decreases in the demand for exploration and production equipment, especially subsea equipment, as a result of deteriorating oil and gas prices in 2015 and 2016. In any given time period, the revenues recognized between the various product lines and geographic areas will vary depending upon the timing of shipments to customers, completion status of the projects accounted for under the percentage-of-completion accounting method, market conditions and customer demand. Service revenues decreased by approximately \$1.4 million, resulting from decreased service revenues in the Eastern Hemisphere of \$6.8 million, partially offset by increased service revenues in Asia Pacific of \$3.7 million and in the Western Hemisphere of \$1.7 million. The decrease in service revenues is largely due to the decline in oil and gas prices leading to decreased exploration and production activities.

Cost of Sales. Cost of sales decreased by \$23.0 million, or 7.0%, to \$305.4 million for 2017 from \$328.4 million for the same period in 2016. As a percentage of revenues, cost of sales was approximately 67.1% in 2017 and 61.0% in 2016. Cost of sales as a percentage of revenue increased in 2017, primarily as a result of unabsorbed manufacturing costs, product mix and pricing concessions, as well as the inclusion of a full year of expenses from the TIW business.

Selling, General and Administrative Expenses. For 2017, selling, general and administrative expenses increased by approximately \$62.9 million, or 118.4%, to \$116.1 million from \$53.1 million in 2016. The Company experienced a non-cash pre-tax foreign currency transaction loss of \$8.3 million for the year ended December 31, 2017, compared to a gain of \$31.7 million for the same period in 2016. In addition, the Company recognized recurring TIW expenses of \$25.1 million for the year ended December 31, 2017 compared to \$5.3 million for the year ended December 31, 2016. Severance costs totaled \$3.0 million for the year ended December 31, 2017, compared to \$2.0 million severance costs for the same period of 2016. Corporate expenses totaled \$36.7 million and \$33.7 million for the year ended December 31, 2017 and 2016, respectively. These increases in costs were partially offset by lower selling costs in the Eastern Hemisphere of \$1.0 million between the year ended December 31, 2017 as a result of reduced headcount and salary reductions in the region. Selling, general and administrative expenses as a percentage of revenues increased to 25.5% for the year ended December 31, 2017 from 9.9% for the same period of 2016.

Engineering and Product Development Expenses. For 2017, engineering and product development expenses decreased by approximately \$2.1 million, or 4.9%, to \$42.2 million from \$44.3 million in 2016 primarily due to a reduction in payroll related expenses. Engineering and product development expenses as a percentage of revenues increased to 9.3% in 2017 from 8.2% in 2016 largely due to the decrease in revenues. Engineering costs related to TIW for the years ended December 31, 2017 and 2016 were \$3.8 million and \$1.0 million, respectively.

Impairment and Other Charges. In connection with our preparation and review of financial statements for the quarter ended September 30, 2017, after considering current Brent crude (Brent) consensus forecasts and expected rig counts for the foreseeable future, we determined the carrying amount of certain of our long-lived assets in the Western Hemisphere exceeded the fair values of such assets due to projected declines in asset utilization, and that the cost of some of our worldwide inventory exceeded its market value. As a result, we recorded corresponding impairments and other charges. Primarily as a result of the factors described above, we recorded charges of approximately \$33.6 million related to inventory and \$27.4 million related to fixed assets. No additional impairments were recorded during the three months ended December 31, 2017. Additionally, no impairments of long-lived assets were recorded in 2016 or 2015.

Income Tax Provision. Income tax expense for 2017 was \$35.0 million on net loss before taxes of \$65.6 million, resulting in an effective income tax rate of approximately negative 53%. Income tax expense in 2016 was \$22.6 million on income before taxes of \$115.9 million, resulting in an effective tax rate of approximately 19.5%. The 2017 effective income tax rate is primarily impacted by the effects of US Tax Reform where estimated provisional reserves were established for the remeasurement of deferred tax assets, for the one-time transition tax, the recording of a valuation allowance against the net U.S. deferred tax assets as well as those in various foreign countries, and various credits and deductions in the U.K.

Going forward, the provisions of US Tax Reform are expected to reduce the Company's effective tax rate in 2018. It is important to note that the ultimate impact on the Company's effective tax rate will largely depend on the percentage of pretax earnings that is generated in the U.S. as compared to the rest of the world.

Net Income (Loss). Net loss was approximately \$100.6 million in 2017, compared to net income of \$93.2 million in 2016, for the reasons set forth above.

Year Ended December 31, 2016 Compared to Year Ended December 31, 2015

Revenues. Revenues decreased by \$305.6 million, or approximately 36.2%, to \$538.7 million in 2016 from \$844.3 million in 2015. The overall decrease in revenues was impacted by a 21.0% decrease in the average contracted offshore rig count (including floating and jack-up rigs) in 2016 as compared to 2015. Product revenues decreased by approximately \$252.4 million for the year ended December 31, 2016 compared to the same period in 2015 as a result of decreased revenues of \$224.7 million in subsea equipment, \$8.9 million in surface equipment and \$18.8 million in offshore rig equipment. Product revenues decreased in the Western Hemisphere by \$78.1 million, in Asia Pacific by \$46.3 million and in the Eastern Hemisphere by \$128.0 million. The decreased revenues are largely due to the decline in oil and gas prices resulting in decreases in the demand for exploration and production equipment, especially subsea equipment. In any given time period, the revenues recognized between the various product lines and geographic areas will vary depending upon the timing of shipments to customers, completion status of the projects accounted for under the percentage-of-completion accounting method, market conditions and customer demand. Service revenues decreased by approximately \$53.2 million resulting from decreased service revenues in the Western Hemisphere of \$25.0 million, in the Eastern Hemisphere of \$18.1 million and \$10.1 million in Asia Pacific. The decrease in service revenues is largely due to the decline in oil and gas prices leading to decreased exploration and production activities.

Cost of Sales. Cost of sales decreased by \$130.9 million, or 28.5%, to \$328.4 million for 2016 from \$459.3 million for the same period in 2015. As a percentage of revenues, cost of sales was approximately 61.0% in 2016 and 54.4% in 2015. Cost of sales as a percentage of revenue increased in 2016 primarily as a result of unabsorbed manufacturing overhead costs.

Selling, General and Administrative Expenses. For 2016, selling, general and administrative expenses decreased by approximately \$34.9 million, or 39.7%, to \$53.1 million from \$88.0 million in 2015. The decrease in selling, general and administrative expenses was primarily due to decreases in personnel and related expenses of \$4.1 million, a 5.9% decrease from 2015, acquisition and restructuring costs of \$4.3 million compared to zero in 2015 and foreign currency gains of \$31.8 million in 2016 as compared to gains of \$5.0 million in 2015. The increase in the foreign exchange gain was caused by a 16.9% decline in the value of the British pound sterling against the U.S. dollar from December 31, 2015 to December 31, 2016. During 2015, the value of the British pound sterling declined only 5.1% against the U.S. dollar. Selling, general and administrative expenses as a percentage of revenues were 9.9% in 2016 and 10.5% in 2015.

Engineering and Product Development Expenses. For 2016, engineering and product development expenses decreased by approximately \$3.8 million, or 7.9%, to \$44.3 million from \$48.1 million in 2015 primarily due to a reduction in payroll related expenses. Engineering and product development expenses as a percentage of revenues increased to 8.2% in 2016 from 5.7% in 2015 largely due to the decrease in revenues.

Income Tax Provision. Income tax expense for 2016 was \$22.6 million on income before taxes of \$115.9 million, resulting in an effective income tax rate of approximately 19.5%. Income tax expense in 2015 was \$57.8 million on income before taxes of \$249.8 million, resulting in an effective tax rate of approximately 23.1%. The decrease in the effective income tax rate percentage primarily reflects the changes in taxable income among the Company's three geographic areas, which have different income tax rates, research and development credits, foreign intellectual property tax benefits and deductions related to domestic manufacturing activities.

Net Income. Net income was approximately \$93.2 million in 2016 and \$192.0 million in 2015 for the reasons set forth above.

Non-GAAP Financial Measures

We have performed a detailed analysis of the non-GAAP measures that are relevant to our business and its operations and determined that the appropriate unit of measure to analyze our performance is Adjusted EBITDA (earnings before interest, taxes, depreciation and amortization, as well as other significant non-cash items and other adjustments for certain charges and credits). The Company believes that the exclusion of these charges and credits from these financial measures enables it to evaluate more effectively the Company's operations period over period and to identify operating trends that could otherwise be masked by excluded items. It is our determination that Adjusted EBITDA is a more relevant measure of how the Company reviews its ability to meet commitments and pursue capital projects.

Adjusted EBITDA

We calculate Adjusted EBITDA as one of the indicators to evaluate and compare the results of our operations from period to period by removing the effect of our capital structure from our operating structure. This measurement is used in concert with net income and cash flows from operations, which measures actual cash generated in the period. In addition, we believe that Adjusted EBITDA is a supplemental measurement tool used by analysts and investors to help evaluate overall operating performance, ability to pursue and service possible debt opportunities and analyze possible future capital expenditures. Adjusted EBITDA does not represent funds available for our discretionary use and is not intended to represent or to be used as a substitute for net income, as measured under U.S. generally accepted accounting principles. The items excluded from Adjusted EBITDA, but included in the calculation of reported net income, are significant components of the consolidated statements of income and must be considered in performing a comprehensive assessment of overall financial performance. Our calculation of Adjusted EBITDA may not be consistent with calculations of Adjusted EBITDA used by other companies.

The following table reconciles our reported net income to Adjusted EBITDA for each of the respective periods:

	2017		2016	2015
		(1	In thousands)	
Net Income (Loss)	\$	(100,639) \$	93,221 \$	192,008
Add:		_	_	_
Interest (income) expense		(3,492)	(3,009)	(936)
Income tax expense (benefit)		34,995	22,647	57,763
Depreciation and amortization expense		40,974	31,857	30,477
Impairment and other non-cash		60,968	_	
Restructuring costs		2,130	3,485	_
Foreign currency loss (gain)		8,292	(31,764)	(5,042)
Severance costs		3,040	1,991	
Stock compensation expense		14,270	12,217	13,125
Adjusted EBITDA (1)	\$	60,538 \$	130,645 \$	287,395

⁽¹⁾ Adjusted EBITDA for the years ended December 31, 2017 and 2016 included negative Adjusted EBITDA of approximately \$(2.6) million and \$(3.1) million, respectively, related to TIW. These decreases in Adjusted EBITDA were related to lower international orders for the years ended December 31, 2017 and 2016. As a result of the full consolidation of TIW, moving forward the results of TIW will be included in our Downhole Tools product line.

Adjusted EBITDA does not measure financial performance under GAAP and, accordingly, should not be considered as an alternative to net income as an indicator of operating performance.

Liquidity and Capital Resources

Cash Flows

Cash flows provided by (used in) operations by type of activity were as follows:

Vear	Ended	December	31
Tear	riided	December	.7

		_	-,			
	2017			2016		2015
				(In thousands)		
Operating activities	\$	107,993	\$	246,522	\$	190,155
Investing activities		(44,892)		(157,849)		(26,655)
Financing activities		560		(21,893)		(73,565)
		63,661		66,780		89,935
Effect of exchange rate changes on cash activities		6,022		(24,619)		(7,304)
Increase in cash and cash equivalents	\$	69,683	\$	42,161	\$	82,631

Statements of cash flows for entities with international operations that are local currency functional exclude the effects of the changes in foreign currency exchange rates that occur during any given year, as these are non-cash changes. As a result, changes reflected in certain accounts on the Consolidated Statements of Cash Flows may not reflect the changes in corresponding accounts on the Consolidated Balance Sheets.

The primary liquidity needs of the Company are (i) to fund capital expenditures to improve and expand facilities and manufacture additional running tools and (ii) to fund working capital. The Company's principal source of funds is cash flows from operations.

Net cash provided by operating activities in 2017 decreased by approximately \$138.5 million, primarily due a net loss in 2017 compared to net income in 2016 which comprised \$193.9 million of the decrease to operating cash flow. In addition to the decrease due to the net loss in 2017, decreases in the change in operating assets and liabilities of \$37.1 million and in other of \$0.3 million were partially offset by increases related to one-time impairment and other charges that were recognized during the third quarter for 2017 of \$61.0 million, deferred income taxes of \$20.6 million, increased depreciation expense of \$9.1 million, which was primarily due to a full year of depreciation on TIW assets, and increased stock compensation expense of \$2.1 million. Net cash provided by operating activities increased \$56.4 million in 2016 compared to 2015, primarily due to an increase in operating assets and liabilities of \$154.8 million offset by lower net income of \$98.8 million.

Net income decreased by \$193.9 million to a net loss of \$100.6 million in 2017 from net income of \$93.2 million in 2016. Net income decreased by \$98.8 million to \$93.2 million in 2016 from \$192.0 million in 2015. The reasons for the changes in net income are set forth in the "Results of Operations" section above.

The change in operating assets and liabilities was \$75.6 million during 2017. This primarily related to decreases in inventories of \$64.3 million as a result of reductions in customer orders and efforts to utilize existing inventory, as well as decreases in deferred income taxes as a result of the newly implemented tax legislation in December 2017 of \$24.5 million, decreases in accounts receivable of \$21.9 million, and decreases in accounts payable and accrued expenses of \$1.6 million. The decrease in accounts payable and accrued expenses was largely due to a reduction in income tax payable of \$0.2 million and customer prepayments of \$7.1 million, as well as a decrease in trade accounts payable of \$2.6 million, offset by increases in other accrued liabilities of \$7.4 million and in accrued compensation of \$0.6 million.

The change in operating assets and liabilities of \$112.7 million during 2016 primarily reflected a decrease in trade receivables of \$106.5 million largely related to increased collection efforts and a decline in revenues. Prepaids and other assets decreased by \$9.8 million due to decreases in vendor prepayments. Inventory decreased \$7.9 million due to decreases in inventory for long-term projects. Accounts payable and accrued expenses increased by \$11.4 million due to a \$9.1 million increase in customer prepayments.

Net cash used in investing activities decreased due to the acquisition of TIW in 2016. See Note 4 of the Notes to the Consolidated Financial Statements for details of the purchase price allocation. Capital expenditures by the Company were \$27.6 million, \$25.8 million and \$27.1 million in 2017, 2016 and 2015, respectively. Capital expenditures in 2017, 2016 and 2015 included expanding worldwide manufacturing facilities as well as increased expenditures on machinery and equipment and running tools. The capital expenditures for 2017 were primarily \$15.7 million for facilities, \$5.5 million for machinery and equipment, \$5.6 million for running tools and other expenditures of \$0.8 million. Capital expenditures in 2016 were primarily \$10.8 million for facilities, \$6.0 million for machinery and equipment, \$7.9 million for running tools and other expenditures of \$1.1 million. Capital expenditures in 2015 were comprised of \$1.0 million for facilities, \$12.7 million for machinery and equipment, \$11.8 million for running tools and other expenditures of \$1.6 million.

The Company acquired The Technologies Alliance Inc. d/b/a OilPatch Technologies (OPT) for approximately \$19.9 million, net of cash and working capital adjustments, during the first quarter of 2017.

Net cash provided by financing activities increased to \$0.6 million for the year ended December 31, 2017, compared to net cash used of \$21.9 million for the year ended December 31, 2016. During the year ended December 31, 2016, the Company repurchased common shares in the amount of approximately \$24.2 million. Additionally, the exercise of stock options generated cash to the Company of \$0.6 million in 2017 and \$2.2 million in both 2016 and 2015.

Repurchase of Equity Securities

On February 26, 2015, the Company announced that its Board of Directors had authorized a stock repurchase plan under which the Company was authorized to repurchase up to \$100 million of its common stock. The Company repurchased 1,184,700 shares under this plan in 2015 for a total of \$75.8 million. During 2016, the Company repurchased 400,500 shares under this plan for a total of \$24.2 million. All repurchased shares were subsequently cancelled.

On July 26, 2016, the Board of Directors authorized a stock repurchase plan under which the Company can repurchase up to \$100 million of its common stock. The repurchase plan has no set expiration date and any repurchased shares are expected to be cancelled. No repurchases have been made pursuant to this plan as of December 31, 2017.

Contractual Obligations

The following table presents long-term contractual obligations of the Company and the related payments in total and by year as of December 31, 2017:

Contractual Obligations			Paym	ents Due by Y	Tear					
	2018	2019	2020	2021	2022	After 2022	Total			
	(In millions)									
Operating lease obligations	\$3.9	\$2.2	\$1.8	\$0.9	\$0.8	\$6.2	\$15.8			

In addition to the above, the Company has issued purchase orders in the ordinary course of business for the purchase of goods and services. These purchase orders are enforceable and legally binding. However, none of the Company's purchase obligations call for deliveries of goods or services for time periods in excess of one year.

The Company believes that cash generated from operations plus cash on hand will be sufficient to fund operations, working capital needs and anticipated capital expenditure requirements for the next twelve months at current activity levels. However, if work activity increases, there could be a strain on working capital. The Company has seen an increase in bidding activity with possible award of work over the 2018 timeframe. If successful in wining work, the Company may need to fund working capital from external commercial lending sources.

New Asset Backed Loan (ABL) Credit Facility

On February 23, 2018, we, as borrower, and our subsidiaries TIW and Honing, Inc., as guarantors, entered into a five-year senior secured revolving credit facility (the "New ABL Credit Facility") with JPMorgan Chase Bank, N.A., as administrative agent, and other financial institutions as lenders with total commitments of \$100.0 million, including up to \$10.0 million available for letters of credit. The maximum amount that we may borrow under the New ABL Credit Facility is subject to the borrowing base, which is based on a percentage of eligible accounts receivable and eligible inventory, subject to reserves and other adjustments.

All obligations under the New ABL Credit Facility are fully and unconditionally guaranteed jointly and severally by the Company, TIW, Honing, Inc., and all of our other present and future significant domestic subsidiaries, subject to customary exceptions. Borrowings under the New ABL Credit Facility are secured by liens on substantially all of our personal property, and bear interest at our option at either (i) the CB Floating Rate (as defined therein), calculated as the rate of interest publicly announced by JPMorgan Chase Bank, N.A., as its "prime rate," subject to each increase or decrease in such prime rate effective as of the date such change occurs with such CB Floating Rate not being less than Adjusted One Month LIBOR Rate (as defined therein, or (ii) the Adjusted LIBO Rate (as defined therein), plus, in each case, an applicable margin. The applicable margin ranges from 1.00% to 1.50% per annum for CBFR loans and 2.00% to 2.50% per annum for Eurodollar loans and, in each case, is based on our leverage ratio. The unused portion of the New ABL Credit Facility is subject to a commitment fee that varies from 0.250% to 0.375% per annum, according to average unused commitments under the New ABL Credit Facility. Interest on Eurodollar loans is payable at the end of the selected interest period, but no less frequently than quarterly. Interest on CB Floating Rate loans is payable monthly in arrears.

The New ABL Credit Facility contains various covenants and restrictive provisions which limit our ability to, among other things, (1) enter into asset sales; (2) incur additional indebtedness; (3) make investments or loans and create liens; (4) pay certain dividends or make other distributions and (5) engage in transactions with affiliates. The New ABL Credit Facility also requires us to maintain a fixed charge coverage ratio based on the ratio of EBITDA (as defined therein) to Fixed Charges (as defined therein) during certain periods, including when availability under the New ABL Credit Facility is under certain levels. If we fail to perform our obligations under the agreement that results in an event of default, the commitments under the New ABL Credit Facility could be terminated and any outstanding borrowings under the New ABL Credit Facility may be declared immediately due and payable. The New ABL Credit Facility also contains cross default provisions that apply to our other indebtedness. We are in compliance with the related covenants as of February 27, 2018.

As of February 27, 2018, we had no borrowings outstanding under the New ABL Credit Facility, no letters of credit outstanding under the New ABL Credit Facility and availability of \$71.0 million.

Backlog

Backlog consists of firm customer orders of Dril-Quip products for which a purchase order or signed contract has been received, satisfactory credit or financing arrangements exist and delivery is scheduled. Historically, the Company's revenues for a specific period have not been directly related to its backlog as stated at a particular point in time. The Company's product backlog was approximately \$207 million at December 31, 2017 and \$318 million at December 31, 2016. The backlog at the end of 2017 represents a decrease of approximately \$111 million, or 35% from the end of 2016. The Company's backlog balance during 2017 was negatively impacted by translation adjustments of approximately \$0.9 million, due primarily to the weakening of the British pound sterling against the U.S. dollar, and by approximately \$1.3 million in cancellations.

The following table represent the change in backlog.

	Year Ended December 31,								
		2017	2016		2015				
	(In thousands)								
Beginning Backlog	\$	317,579	\$ 684,945	\$	1,214,466				
Bookings:									
Product (1)		241,235	179,693		252,347				
Service		104,338	105,719		158,946				
Cancellation/Revision adjustments		(3,105)	(112,770)		(61,542)				
Translation adjustments		2,726	(1,277)		(34,962)				
Total Bookings		345,194	171,365		314,789				
Revenues:									
Product		351,131	433,012		685,364				
Service		104,337	105,719		158,946				
Total Revenue		455,468	538,731		844,310				
Ending Backlog	\$	207,305	\$ 317,579	\$	684,945				

⁽¹⁾ The 2017 product bookings include an adjustment of \$12.8 million related to TIW book and ship business which was previously not being considered in the disclosure. These do not represent new bookings which were entered into in 2017.

The Company expects to fill approximately 70% to 80% of the December 31, 2017 product backlog by December 31, 2018. The remaining backlog at December 31, consists of longer-term projects which are being designed and manufactured to customer specifications requiring longer lead times. In August 2012, the Company's Brazilian subsidiary, Dril-Quip do Brasil LTDA, was awarded a four-year contract by Petrobras, Brazil's national oil company. Following an interim amendment to extend the term of the contract pending the resolution of discussions, the Company entered into an amendment on October 17, 2016 to extend the duration of the contract until July 2020. The contract was valued at \$650 million, net of Brazilian taxes, at exchange rates in effect at that time (approximately \$400.8 million based on the December 31, 2017 exchange rate of 3.308 Brazilian real to 1.00 U.S. dollar) if all the equipment under the contract was ordered. Amounts are included in the Company's backlog as purchase orders under the contract are received. Revenues of approximately \$154 million have been recognized on this contract through December 31, 2017. As of December 31, 2017, the Company's backlog included \$16 million of purchase orders under this Petrobras contract. The Company has not recognized revenue of approximately \$2 million as of December 31, 2017 for certain items of equipment that were completed but not yet accepted for delivery by Petrobras. If Petrobras does not ultimately accept these items for delivery or if they refuse to accept these or similar items completed in the future, the

Company's results of operations may be adversely affected. As part of the amendment to the contract, Petrobras agreed to issue purchase orders totaling a minimum of approximately \$30 million (based on current exchange rates) before 2019. As of December 31, 2017, approximately \$10.9 million of the purchase orders have been issued. The Company cannot provide assurance that Petrobras will order all of the equipment under the contract. See "Item 1A. Risk Factors—Our backlog is subject to unexpected adjustments and cancellations and is, therefore, an uncertain indicator of our future revenues and earnings."

Geographic Segments

The Company's operations are organized into three geographic segments—Western Hemisphere (including North and South America; headquartered in Houston, Texas), Eastern Hemisphere (including Europe and Africa; headquartered in Aberdeen, Scotland) and Asia Pacific (including the Pacific Rim, Southeast Asia, Australia, India and the Middle East; headquartered in Singapore). Each of these segments sells similar products and services, and the Company has major manufacturing facilities in all three of its regional headquarter locations as well as in Macae, Brazil. Revenues for each of these segments are dependent upon the ultimate sale of products and services to the Company's customers. For information on revenues by geographic segment, see Note 14 of the Notes to Consolidated Financial Statements. Revenues of the Western Hemisphere are also influenced by its sale of products to the Eastern Hemisphere and Asia Pacific segments. Accordingly, the operating incomes of each area are closely tied to third-party sales, and the operating income of the Western Hemisphere is also dependent upon its level of intercompany sales.

Currency Risk

The Company has operations in various countries around the world and conducts business in a number of different currencies other than the U.S. dollar, principally the British pound sterling and the Brazilian real. Our significant foreign subsidiaries may also have monetary assets and liabilities not denominated in their functional currency. These monetary assets and liabilities are exposed to changes in currency exchange rates which may result in non-cash gains and losses primarily due to fluctuations between the U.S. dollar and each subsidiary's functional currency.

The Company generally attempts to minimize its currency exchange risk by seeking international contracts payable in local currency in amounts equal to the Company's estimated operating costs payable in local currency and in U.S. dollars for the balance of the contracts. The Company had, net of income taxes, transaction losses of \$4.0 million in 2017 and gains of \$25.6 million and \$3.9 million in 2016 and 2015, respectively. There is no assurance that the Company will be able to protect itself against such fluctuations in the future. The Company has put in place an active cash management process to convert excess foreign currency and concentrate this cash in certain of our holding company bank accounts to minimize foreign currency risk and increase investment income.

The Company conducts business in certain countries that limit repatriation of earnings. Further, there can be no assurance that the countries in which the Company currently operates will not adopt policies limiting repatriation of earnings in the future. The Company also has significant investments in countries other than the United States, principally its manufacturing operations in Scotland, Singapore, Brazil and, to a lesser extent, Norway. The functional currency of these foreign operations is the local currency except for Singapore, where the U.S. dollar is used. Financial statement assets and liabilities in the functional currency are translated at the end of the period exchange rates. Resulting translation adjustments are reflected as a separate component of stockholders' equity and have no current effect on earnings or cash flow.

Critical Accounting Policies

The Company's discussion and analysis of its financial condition and results of operations are based on the Company's consolidated financial statements, which have been prepared in conformity with accounting principles generally accepted in the United States of America. The preparation of the consolidated financial statements requires the Company to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. There can be no assurance that actual results will not differ from those estimates. The Company believes the following accounting policies affect its more significant judgments and estimates used in preparation of its consolidated financial statements.

Revenue Recognition

Product revenues

The Company recognizes product revenues from two methods:

- · product revenues recognized under the percentage-of-completion method; and
- product revenues from the sale of products that do not qualify for the percentage-of-completion method.

Revenues recognized under the percentage-of-completion method

The Company uses the percentage-of-completion method on long-term contracts that have the following characteristics:

- the contracts call for products which are designed to customer specifications;
- the structural designs are unique and require significant engineering and manufacturing efforts generally requiring more than one year in duration;
- the contracts contain specific terms as to milestones, progress billings and delivery dates; and
- product requirements cannot be filled directly from the Company's standard inventory.

For each project, the Company prepares a detailed analysis of estimated costs, profit margin, completion date and risk factors which include availability of material, production efficiencies and other factors that may impact the project. On a quarterly basis, management reviews the progress of each project, which may result in revisions of previous estimates, including revenue recognition. The Company calculates the percent complete and applies the percentage to determine the revenues earned and the appropriate portion of total estimated costs. Losses, if any, are recorded in full in the period they become known. Historically, the Company's estimates of total costs and costs to complete have approximated actual costs incurred to complete the project.

Under the percentage-of-completion method, billings may not correlate directly to the revenue recognized. Based upon the terms of the specific contract, billings may be in excess of the revenue recognized, in which case the amounts are included in customer prepayments as a liability on the Consolidated Balance Sheets. Likewise, revenue recognized may exceed customer billings in which case the amounts are reported in trade receivables. Unbilled revenues are expected to be billed and collected within one year. At December 31, 2017 and 2016, receivables included \$41.0 million and \$56.8 million of unbilled receivables, respectively. For the year ended December 31, 2017, there were eight projects representing approximately 13% of the Company's total revenues and approximately 16% of its product revenues, and 10 projects during 2016 representing approximately 14% of the Company's total revenues and approximately 17% of its product revenues, which were accounted for using percentage-of-completion accounting.

Revenues not recognized under the percentage-of-completion method

Revenues from the sale of inventory products, not accounted for under the percentage-of-completion method, are recorded at the time the manufacturing processes are complete and ownership is transferred to the customer.

Service revenues

The Company earns service revenues from three sources:

- technical advisory assistance;
- rental of running tools; and
- rework and reconditioning of customer-owned Dril-Quip products.

The Company does not install products for its customers, but it provides technical advisory assistance. At the time of delivery of the product, the customer is not obligated to buy or rent the Company's running tools and the Company is not obligated to perform any subsequent services relating to installation. Technical advisory assistance service revenue is recorded at the time the service is rendered. Service revenues associated with the rental of running and installation tools are recorded as earned. Rework and reconditioning service revenues are recorded when the refurbishment process is complete.

The Company normally negotiates contracts for products, including those accounted for under the percentage-of-completion method, and services separately. For all product sales, it is the customer's decision as to the timing of the product installation as well as whether Dril-Quip running tools will be purchased or rented. Furthermore, the customer is under no obligation to utilize the Company's technical advisory assistance services. The customer may use a third party or their own personnel.

Inventories. Inventory costs are determined principally by the use of the first-in, first-out (FIFO) costing method and are stated at the lower of cost or net realizable value. Company manufactured inventory is valued principally using standard costs, which are calculated based upon direct costs incurred and overhead allocations and approximate actual costs. Inventory purchased from third-party vendors is principally valued at the weighted average cost. Periodically, obsolescence reviews are performed on slow-moving inventories and reserves are established based on current assessments about future demands and market conditions. The inventory values have been reduced by a reserve for excess and slow-moving inventories of \$83.5 million and \$45.6 million as of December 31, 2017 and 2016, respectively. If market conditions are less favorable than those projected by management, additional inventory reserves may be required.

Contingent Liabilities. The Company establishes reserves for estimated loss contingencies when the Company believes a loss is probable and the amount of the loss can be reasonably estimated. Revisions to contingent liabilities are reflected in net

income in the period in which different or additional facts or information become known or circumstances change that affect the Company's previous assumptions with respect to the likelihood or amount of loss. Reserves for contingent liabilities are based upon the Company's assumptions and estimates regarding the probable outcome of the matter. Should the outcome differ from the Company's assumptions and estimates, revisions to the estimated reserves for contingent liabilities would be required.

Off-Balance Sheet Arrangements

The Company has no derivative instruments and no off-balance sheet hedging or financing arrangements, contracts or operations.

New Accounting Standards

The information set forth under Note 3 of Notes to the Consolidated Financial Statements under the caption "New Accounting Standards" is incorporated herein by reference.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

The Company is currently exposed to certain market risks related to interest rate changes on its short-term investments and fluctuations in foreign currency exchange rates. The Company does not engage in any material hedging transactions, forward contracts or currency trading which could mitigate the market risks inherent in such transactions. There have been no material changes in market risks for the Company from December 31, 2016.

Foreign Currency Exchange Rate Risk

Through its subsidiaries, the Company conducts a portion of its business in currencies other than the United States dollar, principally the British pound sterling and the Brazilian real. There is no assurance that the Company will be able to protect itself against currency fluctuations in the future. In periods where the dollar is strong as compared to other currencies, it is possible that foreign sales may reflect a decline in profits due to translation. It does not appear the Company's sales have experienced significant profit declines. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Currency Risk" in Item 7 of this report.

The Company uses a sensitivity analysis model to measure the potential impact on revenue and net income of a 10% adverse movement of foreign currency exchange rates for the British pound sterling and the Brazilian real against the U.S. dollar over the previous year. Based upon this model, a 10% decrease would have resulted in a decrease in revenues of approximately \$14.6 million and a decrease in net income of approximately \$1.0 million for 2017. There can be no assurance that the exchange rate decrease projected above will materialize as fluctuations in exchange rates are beyond the Company's control.

Management's Annual Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is defined in Rule 13a-15(f) or 15d-15(f) promulgated under the Securities Exchange Act of 1934 as a process designed by, or under the supervision of, the Company's principal executive and principal financial officers and effected by the Company's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements
 in accordance with accounting principles generally accepted in the United States of America, and that receipts and
 expenditures of the company are being made only in accordance with authorizations of management and directors of
 the company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Management has designed its internal control over financial reporting to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our management, including our principal executive officers and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control—Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control—Integrated Framework* (2013), our management has concluded that our internal control over financial reporting was effective as of December 31, 2017.

PricewaterhouseCoopers LLP, the independent registered public accounting firm, who audited the consolidated financial statements included in this Annual Report on Form 10-K, has also audited the effectiveness of our internal control over financial reporting, as stated in their report which appears herein.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of Dril-Quip, Inc.

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Dril-Quip, Inc. and its subsidiaries as of December 31, 2017 and 2016, and the related consolidated statements of income (loss), comprehensive income (loss), stockholders' equity and cash flows for each of the three years in the period ended December 31, 2017, including the related notes and financial statement schedule listed in the index appearing under Item 15(a)(2) (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2017 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

DRIL-QUIP, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Organization

Dril-Quip, Inc., a Delaware corporation (the "Company" or "Dril-Quip"), designs, manufactures, sells and services highly engineered drilling and production equipment that is well suited primarily for use in deepwater, harsh environment and severe service applications. The Company's principal products consist of subsea and surface wellheads, subsea and surface production trees, subsea control systems and manifolds, mudline hanger systems, specialty connectors and associated pipe, drilling and production riser systems, liner hangers, wellhead connectors, diverters and safety valves. Dril-Quip's products are used by major integrated, large independent and foreign national oil and gas companies and drilling contractors throughout the world. Dril-Quip also provides technical advisory assistance on an as-requested basis during installation of its products, as well as rework and reconditioning services for customer-owned Dril-Quip products. In addition, Dril-Quip's customers may rent or purchase running tools from the Company for use in the installation and retrieval of the Company's products.

The Company's operations are organized into three geographic segments—Western Hemisphere (including North and South America; headquartered in Houston, Texas), Eastern Hemisphere (including Europe and Africa; headquartered in Aberdeen, Scotland) and Asia Pacific (including the Pacific Rim, Southeast Asia, Australia, India and the Middle East; headquartered in Singapore). Each of these segments sells similar products and services and the Company has major manufacturing facilities in all three of its regional headquarter locations as well as in Macae, Brazil. The Company's major subsidiaries are Dril-Quip (Europe) Limited, located in Aberdeen with branches in Denmark, Norway and Holland; Dril-Quip Asia Pacific PTE Ltd., located in Singapore; and Dril-Quip do Brasil LTDA, located in Macae, Brazil. Other operating subsidiaries include TIW Corporation (TIW), located in Houston, Texas; DQ Holdings Pty. Ltd., located in Perth, Australia. Other subsidiaries include Dril-Quip (Ghana) Ltd., located in Takoradi, Ghana; PT DQ Oilfield Services Indonesia, located in Jakarta, Indonesia; Dril-Quip (Nigeria) Ltd., located in Port Harcourt, Nigeria; Dril-Quip Egypt for Petroleum Services S.A.E., located in Alexandria, Egypt; Dril-Quip Oilfield Services (Tianjin) Co. Ltd., located in Tianjin, China, with branches in Shezhen and Beijing, China; and Dril-Quip Qatar LLC, located in Doha, Qatar; TIW de Mexico S.A. de C.V., located in Villahermosa, Mexico; TIW de Venezuela S.A., located in Anaco, Venezuela and with a registered branch located in Shushufindi, Ecuador; TIW (UK) Limited, located in Aberdeen, Scotland; TIW Hungary LLC, located in Szolnok, Hungary; and TIW International, LLC., with a registered branch located in Singapore.

On November 10, 2016, the Company acquired TIW, a Texas corporation, located in Houston, Texas, and all of its subsidiaries. TIW manufactures consumable downhole products for the onshore and offshore global oil and gas market. For a listing of all of Dril-Quip's subsidiaries, please see Exhibit 21.1 to this report.

On January 6, 2017, the Company acquired The Technologies Alliance Inc. d/b/a OilPatch Technologies (OPT) for approximately \$20.0 million, which was integrated into the Company's existing Western Hemisphere operations.

2. Significant Accounting Policies

Principles of Consolidation

The consolidated financial statements include the accounts of the Company and its subsidiaries. All material intercompany accounts and transactions have been eliminated.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Some of the Company's more significant estimates are those affected by critical accounting policies for revenue recognition, inventories and contingent liabilities.

Cash and Cash Equivalents

Short-term investments that have a maturity of three months or less from the date of purchase are classified as cash equivalents. The Company invests excess cash in interest bearing accounts, money market mutual funds and funds which invest in U.S. Treasury obligations and repurchase agreements backed by U.S. Treasury obligations. The Company's investment objectives continue to be the preservation of capital and the maintenance of liquidity.

Trade Receivables

The Company maintains an allowance for doubtful accounts on trade receivables equal to amounts estimated to be uncollectible. This estimate is based upon historical collection experience combined with a specific review of each customer's outstanding trade receivable balance. Management believes that the allowance for doubtful accounts is adequate; however, actual write-offs may exceed the recorded allowance.

Inventories

Inventory costs are determined principally by the use of the first-in, first-out (FIFO) costing method and are stated at the lower of cost or market. Company manufactured inventory is valued principally using standard costs, which are calculated based upon direct costs incurred and overhead allocations and approximate actual costs. Inventory purchased from third-party vendors is principally valued at the weighted average cost. Periodically, obsolescence reviews are performed on slow-moving inventories and reserves are established based on current assessments about future demands and market conditions. The inventory values have been reduced by a reserve for excess and slow-moving inventories. Inventory reserves of \$83.5 million and \$45.6 million were recorded as of December 31, 2017 and 2016, respectively. If market conditions are less favorable than those projected by management, additional inventory reserves may be required.

Inventories acquired from TIW and OPT as of November 10, 2016 and January 6, 2017, respectively, have been recorded at provisional fair values. For additional information, see Note 4, Business Acquisitions.

Property, Plant and Equipment

Property, plant and equipment are carried at cost, with depreciation provided on a straight-line basis over their estimated useful lives. We capitalize costs incurred to enhance, improve and extend the useful lives of our property and equipment and expense costs incurred to repair and maintain the existing condition of our assets.

Property, plant and equipment acquired from TIW and OPT as of November 10, 2016 and January 6, 2017, respectively, have been recorded at provisional fair values. For additional information, see Note 4, Business Acquisitions.

Goodwill

Goodwill consists of the excess of the acquisition costs over the fair value of net assets acquired in business combinations. Goodwill is reviewed for impairment annually in the fourth quarter of each year and when events or changes in circumstances indicate that the carrying amount may be impaired. For this purpose, goodwill is evaluated at the reporting unit level. Dril-Quip recorded goodwill related to the acquisition of TIW and OPT. For further information regarding goodwill, see Note 8, Goodwill.

Intangible Assets

Definite-lived intangible assets consist of patents and customer relationships. Dril-Quip recognizes amortization expense for definite-lived intangible assets on a straight-line basis over the estimated useful lives. Indefinite-lived intangible assets consist of trademarks, specifically trade names acquired as part of the acquisition of TIW. Indefinite-lived intangible assets are stated at cost and are not amortized; instead, they are tested for impairment at least annually. The Company reviews acquired trademarks for impairment in the fourth quarter of each year and when events or changes in circumstances indicate that the assets may be impaired. The fair value of trademarks is estimated using the relief from royalty method to estimate the value of the cost savings and a discounted cash flows method to estimate the value of future income. The sum of these two values for each trademark is the fair value of the trademark. If the carrying amount of trademarks exceeds the estimated fair value, the impairment is calculated as the excess of carrying amount over the estimate of fair value. For additional information regarding other assets, see Note 9, Intangible Assets.

Impairment of Long-Lived Assets

Long-lived assets, including property, plant and equipment, are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. If the carrying amount of an asset exceeds the estimated undiscounted future cash flows expected to be generated by the asset, an impairment charge is recognized by reflecting the asset at its fair value. We review the recoverability of the carrying value of our assets based upon estimated future cash flows while taking into consideration assumptions and estimates, including the future use of the asset, remaining useful life of the asset and service potential of the asset. Additionally, inventories are valued at the lower of cost or market.

In connection with our preparation and review of financial statements for the quarter ended September 30, 2017, after considering current Brent crude (Brent) consensus forecasts and expected rig counts for the foreseeable future, we determined the carrying amount of certain of our long-lived assets in the Western Hemisphere exceeded their respective fair values due to projected declines in asset utilization, and that the cost of some of our worldwide inventory exceeded its market value. As a result, we recorded corresponding impairments and other charges. Primarily as a result of the factors described above, we recorded charges of approximately \$33.6 million related to inventory and \$27.4 million related to fixed assets. No additional

impairments were recorded during the three months ended December 31, 2017. Additionally, no impairments of long-lived assets were recorded in 2016 or 2015.

Income Taxes

The Company accounts for income taxes using the asset and liability method. Current income taxes are provided on income reported for financial statement purposes, adjusted for transactions that do not enter into the computation of income taxes payable in the same year. Deferred tax assets and liabilities are measured using enacted tax rates for the expected future tax consequences of temporary differences between the carrying amounts and the tax basis of assets and liabilities. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. Valuation allowances are established when necessary to reduce deferred income tax assets to the amounts that are expected more likely than not to be realized in the future. The Company classifies interest and penalties related to uncertain tax positions as income taxes in its financial statements.

In view of the recent enactment of US Tax Reform, the Company recorded estimated provisional reserves to account for the re-measurement of deferred tax assets due to the corporate tax rate change from 35% to 21% and the impact of the one-time transition tax for unremitted foreign earnings.

Revenue Recognition

Product revenues

The Company recognizes product revenues from two methods:

- · product revenues recognized under the percentage-of-completion method; and
- product revenues from the sale of products that do not qualify for the percentage-of-completion method.

Revenues recognized under the percentage-of-completion method

The Company uses the percentage-of-completion method on long-term project contracts that have the following characteristics:

- the contracts call for products which are designed to customer specifications;
- the structural designs are unique and require significant engineering and manufacturing efforts generally requiring more than one year in duration;
- · the contracts contain specific terms as to milestones, progress billings and delivery dates; and
- product requirements cannot be filled directly from the Company's standard inventory.

For each project, the Company prepares a detailed analysis of estimated costs, profit margin, completion date and risk factors which include availability of material, production efficiencies and other factors that may impact the project. On a quarterly basis, management reviews the progress of each project, which may result in revisions of previous estimates, including revenue recognition. The Company calculates the percentage complete and applies the percentage to determine the revenues earned and the appropriate portion of total estimated costs. Losses, if any, are recorded in full in the period they become known. Historically, the Company's estimates of total costs and costs to complete have approximated actual costs incurred to complete the project.

Under the percentage-of-completion method, billings may not correlate directly to the revenue recognized. Based upon the terms of the specific contract, billings may be in excess of the revenue recognized, in which case the amounts are included in customer prepayments as a liability on the Consolidated Balance Sheets. Likewise, revenue recognized may exceed customer billings in which case the amounts are reported in trade receivables. Unbilled revenues are expected to be billed and collected within one year. At December 31, 2017 and 2016, receivables included \$41.0 million and \$56.8 million of unbilled receivables, respectively. For the year ended December 31, 2017, there were eight projects representing approximately 13% of the Company's total revenues and approximately 16% of its product revenues, and 10 projects during 2016 representing approximately 14% of the Company's total revenues and approximately 17% of its product revenues, which were accounted for using percentage-of-completion accounting.

Revenues not recognized under the percentage-of-completion method

Revenues from the sale of inventory products, not accounted for under the percentage-of-completion method, are recorded at the time the manufacturing processes are complete and ownership is transferred to the customer.

Service revenues

The Company earns service revenues from three sources:

- technical advisory assistance;
- rental of running tools; and
- rework and reconditioning of customer-owned Dril-Quip products.

The Company does not install products for its customers, but it does provide technical advisory assistance. At the time of delivery of the product, the customer is not obligated to buy or rent the Company's running tools and the Company is not obligated to perform any subsequent services relating to installation. Technical advisory assistance service revenue is recorded at the time the service is rendered. Service revenues associated with the rental of running and installation tools are recorded as earned. Rework and reconditioning service revenues are recorded when the refurbishment process is complete.

The Company normally negotiates contracts for products, including those accounted for under the percentage-of-completion method, and services separately. For all product sales, it is the customer's decision as to the timing of the product installation as well as whether Dril-Quip running tools will be purchased or rented. Furthermore, the customer is under no obligation to utilize the Company's technical advisory assistance services. The customer may use a third party or their own personnel.

Foreign Currency

The financial statements of foreign subsidiaries are translated into U.S. dollars at period-end exchange rates except for revenues and expenses, which are translated at average monthly rates. Translation adjustments are reflected as a separate component of stockholders' equity and have no effect on current earnings or cash flows.

Foreign currency exchange transactions are recorded using the exchange rate at the date of the settlement. The Company experienced exchange losses (gains) of approximately \$12.7 million, \$(25.6) million and \$(3.9) million in 2017, 2016 and 2015, respectively, net of income taxes. These amounts are included in selling, general and administrative costs in the Consolidated Statements of Income on a pre-tax basis.

Fair Value of Financial Instruments

The Company's financial instruments consist primarily of cash and cash equivalents, receivables and payables. The carrying values of these financial instruments approximate their respective fair values as they are short-term in nature.

Concentration of Credit Risk

Financial instruments which subject the Company to concentrations of credit risk primarily include trade receivables. The Company grants credit to its customers, which operate primarily in the oil and gas industry. The Company performs periodic credit evaluations of its customers' financial condition and generally does not require collateral. The Company maintains reserves for potential losses, and actual losses have historically been within management's expectations.

In addition, the Company invests excess cash in interest bearing accounts, money market mutual funds and funds which invest in obligations of the U.S. Treasury and repurchase agreements backed by U.S. Treasury obligations. Changes in the financial markets and interest rates could affect the interest earned on short-term investments.

Earnings Per Share

Basic earnings per common share is computed by dividing net income by the weighted average number of shares of common stock outstanding during the period. Diluted earnings per common share is computed considering the dilutive effect of stock options and awards using the treasury stock method.

3. New Accounting Standards

In September 2017, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2017-13, "Revenue Recognition (Topic 605), Revenue from Contracts with Customers (Topic 606), Leases (Topic 840), and Leases (Topic 842)". This update clarifies the definition of a public business entity for the application of the new revenue recognition and leasing standards. This update did not have an impact on our assessment of these standards, discussed below in connection with ASU 2014-09, and will not impact our implementation strategies. The revenue standard is effective for annual periods beginning after December 15, 2017, including interim periods within those fiscal years, and the leasing standard is effective for annual periods beginning after December 15, 2018, including interim periods within those fiscal years.

In May 2017, the FASB issued ASU 2017-09, "Compensation - Stock Compensation (Topic 718): Scope of Modification Accounting." This update clarifies which changes to the terms or conditions of a share-based payment award require an entity

to apply modification accounting in Topic 718. For public business entities, the amendments in this update are effective for fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. The Company did not identify any modifications to its existing awards and therefore has concluded that there is no impact to its consolidated financial statements.

In January 2017, the FASB issued ASU 2017-04, "Intangibles - Goodwill and Other (Topic 350)." The standard simplifies the subsequent measurement of goodwill by removing the second step of the two-step impairment test. The amendment requires an entity to perform its annual or interim goodwill impairment test by comparing the fair value of a reporting unit with its carrying amount. An impairment charge should be recognized for the amount by which the carrying amount exceeds the reporting unit's fair value; however, the loss recognized should not exceed the total amount of goodwill allocated to that reporting unit. An entity still has the option to perform the qualitative assessment for a reporting unit to determine if the quantitative impairment test is necessary. The amendment should be applied on a prospective basis. The standard is effective for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years. Early adoption is permitted for interim or annual goodwill impairment tests performed on testing dates after January 1, 2017. The Company has adopted this standard as of October 1, 2017.

In January 2017, the FASB issued ASU 2017-01, "Business Combinations: Clarifying the Definition of a Business (Topic 805)." This update clarifies the definition of a business with the objective of adding guidance to assist entities with evaluating whether transactions should be accounted for as acquisitions (or disposals) of assets or businesses. For public business entities, the amendments in this update are effective for fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. The Company has adopted this standard as of December 31, 2017.

In March 2016, the FASB issued ASU 2016-09 "Improvements to Employee Share-Based Payment Accounting (Topic 718)." The standard simplifies several aspects of accounting for share-based payment transactions, including the accounting for income taxes, forfeitures and statutory withholding requirements, as well as classification in the statement of cash flows. The standard is effective for annual periods beginning after December 15, 2016, including interim periods within those fiscal years. The Company adopted this standard as of January 1, 2017. The primary impact of this standard is the income tax effects of awards recognized when the awards are vested or settled is now reflected in the statement of cash flows as part of net income from operating activities.

In February 2016, the FASB issued ASU 2016-02 "Leases (Topic 842)." The new standard requires lessees to recognize lease assets (right of use) and lease obligations (lease liability) for leases previously classified as operating leases under generally accepted accounting principles on the balance sheet for leases with terms in excess of 12 months. The standard is effective for annual periods beginning after December 15, 2018, including interim periods within those fiscal years. The Company is in the process of assessing its contractual commitments and arrangements with respect to the required presentation and disclosure under the new lease standard and its impact. Remaining implementation matters include completing the gap analysis between current requirements and the new leasing standard, establishing new policies, procedures and controls and quantifying any adjustments upon adoption.

In November 2015, the FASB issued ASU 2015-17 "Income Taxes (Topic 740)." The new standard requires that deferred tax assets and liabilities be classified as noncurrent on a classified balance sheet. The Company adopted this standard in the first quarter of 2017 on a prospective basis.

In May 2014, the FASB issued ASU 2014-09 "Revenue from Contracts with Customers (Topic 606)", herein referred to as the "New Standard." The amendment applies a new five-step revenue recognition model to be used in recognizing revenues associated with customer contracts. The amendment requires disclosure sufficient to enable readers of financial statements to understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers, including qualitative and quantitative disclosures, significant judgments and changes in judgments and assets recognized from the costs to obtain or fulfill the contract. The standard's effective date was originally for fiscal years beginning after December 15, 2016, including interim periods within that reporting period. On April 1, 2015, the FASB voted to defer the effective date by one year to December 15, 2017 and interim periods within annual reporting periods beginning after December 15, 2017. The new revenue standard permits companies to either apply the requirements retrospectively to all prior periods presented or apply the requirements in the year of adoption through a cumulative adjustment. The Company has engaged a third-party expert to review our significant revenue streams and identify the required changes to our revenue recognition policies. Based on our existing customer contracts and relationships, we do not expect the implementation of the new guidance to have a material impact on our consolidated financial statements upon adoption. The Company's evaluation of the impact could change if we enter into new revenue arrangements in the future or interpretations of the new guidance further evolve.

While not expected to be material, the more significant changes to the Company's revenue recognition policies are in the following areas:

Products: Revenues for products sold in Brazil not under the percentage-of-completion method are primarily
recognized upon receipt of approval to invoice the customer due to formal customer acceptance procedures. Under the
New Standard, the Company assessed the customer acceptance procedures and determined that Dril-Quip and the
customer can objectively determine that the agreed-upon specifications of the product have been met and control
transfers to the customer upon delivery of the product. As a result, under the New Standard, revenue is recognized at a
point in time upon transfer of control of the product.

Services:

- Technical Advisory Similar to products, revenues for technical advisory services provided in Brazil are currently recognized upon receipt of approval to invoice due to formal customer acceptance procedures. Under the New Standard, the Company assessed the customer acceptance procedures and determined that Dril-Quip and the customer can objectively determine that the agreed-upon specifications of the services have been met and control transfers to the customer as the services are provided. As a result, revenue under the New Standard is recognized over time as the services are being performed.
- Rework and reconditioning -Revenues for rework and reconditioning services provided in Brazil are currently recognized upon receipt of approval to invoice due to formal customer acceptance procedures. Under the New Standard, the Company assessed the customer acceptance procedures and determined that Dril-Quip and the customer can objectively determine that the agreed-upon specifications of the services have been met and control transfers to the customer as the services are provided. As a result, revenue under the New Standard is recognized over time as the services are being performed.
 - Revenues for rework and reconditioning services are primarily recognized at a point in time upon completion of the services. Under the New Standard, revenue from such services is expected to be recognized over time as the services are provided and control is transferred to the customer.
- Fines and liquidated damages are currently expensed when incurred. Under the New Standard, fines and liquidated
 damages are estimated at contract inception and at each subsequent reporting period and the total transaction price is
 reduced accordingly (i.e. impacts revenue instead of expense).
- The Company uses local agents in certain countries and may pay the local agents a commission related to individual contracts. Currently, these commissions are expensed as incurred. However, under the New Standard, in situations in which the local agent is determined to be the principal in the relationship (i.e. they are the customer), the commission is consideration payable to a customer, and therefore reduces the total transaction price (i.e. impacts revenue instead of expense). In situations in which the local agent is determined not to be the principal in the relationship, the commission will be assessed to determine if it is a cost to obtain a contract and will be capitalized accordingly.

We are continuing our assessment of potential changes to our disclosures under the New Standard. The Company currently expects to adopt the standard using the modified retrospective method, which requires us to report revenue under the New Standard for 2018 and future periods, and recognize a cumulative effect adjustment in retained earnings for differences resulting from application of the New Standard to contracts that were not substantially complete at January 1, 2018. We have considered the new expanded disclosures associated with the new revenue standard for the first quarter of 2018. We will provide additional disclosures regarding any material differences in reported financial statement line items in 2018 when compared to the amounts what would have been reported under legacy accounting guidance.

4. Business Acquisitions

TIW Acquisition

On October 14, 2016, the Company entered into an agreement with Pearce Industries, Inc. to acquire all the outstanding common stock, par value \$100.00 per share, of TIW for a cash purchase price of \$142.7 million, which was subject to customary adjustments for cash and working capital. The acquisition closed on November 10, 2016 and is expected to strengthen the Company's liner hanger sales and increase market share. Additionally, the acquisition of TIW gave Dril-Quip a presence in the onshore oil and gas market.

Total acquisition costs through December 31, 2017 in connection with the purchase of TIW were \$2.5 million and were expensed in general and administrative costs.

Purchase Price Allocation

Acquired assets and liabilities were recorded at estimated fair value as of the acquisition date. The excess of the purchase price over the estimated fair value of tangible and intangible identifiable net assets resulted in the recognition of goodwill of \$33.5 million, the majority of which is included in long-lived assets in the Western Hemisphere and is attributable to expected

synergies from combining operations as well as intangible assets which do not qualify for separate recognition. The amount of goodwill that is deductible for income tax purposes is not significant.

The goodwill was determined on the basis of the fair values of the tangible and intangible assets and liabilities as of the acquisition date. It may be adjusted if the fair values change as a result of circumstances existing at the acquisition date. Such fair value adjustments may arise in respect to intangible assets, inventories and property, plant and equipment, upon completion of the necessary valuations and physical verifications of such assets. The amount of deferred taxes may also be adjusted during the measurement period. For further information regarding goodwill, see Note 8, Goodwill.

The following table sets forth the purchase price allocation, which was based on fair value of assets acquired and liabilities assumed at the acquisition date, November 10, 2016:

	Valuation at November 10, 2016
	(In thousands)
Cash	\$ 1,829
Trade receivables	9,794
Inventories	29,896
Prepaid and other current assets	3,572
Deferred income taxes	205
Property, plant and equipment	38,058
Intangible assets (1)	29,808
Total assets acquired	113,162
Accounts payable	10,325
Customer prepayments	2,757
Other accrued liabilities	2,644
Deferred tax liabilities, non-current	2,261
Total liabilities assumed	17,987
Net identifiable assets acquired	95,175
Goodwill	33,522
Net assets acquired	\$ 128,697

⁽¹⁾ Includes \$3.0 million of patents with a weighted average useful life of 10 years, \$8.4 million of tradenames with an indefinite life and \$18.1 million of customer relationships with a weighted average useful life of 15 years. See Note 9, Intangible Assets, for further information regarding intangible assets.

Summary of Unaudited Pro Forma Information

TIW's results of operations have been included in Dril-Quip's financial statements for the period subsequent to the closing of the acquisition on November 10, 2016. Business acquired from TIW contributed revenues of \$49.4 million, a pre-tax operating loss of \$15.5 million and a net loss of \$15.9 million for the year ended December 31, 2017.

The following table reflects the unaudited pro forma consolidated results of operations for the periods presented, as though the acquisition of TIW had occurred on January 1, 2015:

	Year Ended December 31,					
	2016			2015		
	(1	(In thousands, except per share data)				
		(Unau	dited)			
Revenues	\$	595,797	\$	943,714		
Net income	\$	84,756	\$	193,310		
Basic earnings per share	\$	2.26	\$	5.04		
Diluted earnings per share	\$	2.25	\$	5.02		

The unaudited pro forma financial information is presented for illustrative purposes only and is not indicative of the results of operations that would have been realized if the acquisition had been completed on the date indicated, nor is it indicative of future operating results. The pro forma results do not include, for example, the effects of anticipated synergies from the acquisition. As a result of the full consolidation of TIW, we will no longer communicate the results of TIW net income beginning in 2018.

OPT

On January 6, 2017, the Company acquired OPT for approximately \$20.0 million, which was subject to customary adjustments for cash and working capital. The acquisition was accounted for as a business combination in accordance with ASC 805. The purchase price was subject to closing adjustments and was funded with cash on hand. The acquisition does not have a material impact on the Company's Consolidated Balance Sheets. OPT's results of operations for the periods prior to this acquisition were not material to the Company's Consolidated Statements of Operations.

5. Inventories, net

Inventories consist of the following:

	December 31,				
		2017		2016	
		(In tho	usand	<u>s)</u>	
Raw materials and supplies	\$	70,188	\$	85,684	
Work in progress		65,382		81,645	
Finished goods		239,083		233,732	
		374,653		401,061	
Less: allowance for obsolete and excess inventory (see Note 7)		(83,566)		(45,648)	
Total inventory	\$	291,087	\$	355,413	

6. Property, Plant and Equipment, net

Property, plant and equipment consists of:

	Estimated Useful		Decem	ber 3	1,
	Lives		2017	2016	
			(In tho	usand	<u>s)</u>
Land improvements	10-25 years	\$	7,485	\$	8,585
Buildings	15-40 years		183,437		191,485
Machinery, equipment and other	3-10 years		361,959		370,578
			552,881		570,649
Less accumulated depreciation			(315,091)		(293,854)
			237,790		276,795
Land			13,464		12,120
Construction work in process			32,993		34,234
Total property, plant and equipment		\$	284,247	\$	323,149

Depreciation expense totaled \$38.6 million, \$31.6 million and \$30.5 million for 2017, 2016 and 2015, respectively.

7. Impairments and Other Charges

We carry a variety of long-lived assets on our balance sheet, including property, plant and equipment, goodwill and other intangibles. We conduct impairment tests on long-lived assets if events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. We review the recoverability of the carrying value of our assets based upon estimated future cash flows while taking into consideration assumptions and estimates including the future use of the asset, remaining useful life of the asset and service potential of the asset. Additionally, inventories are valued at the lower of cost or net realizable value.

In connection with our preparation and review of financial statements for the quarter ended September 30, 2017, after considering current Brent crude (Brent) consensus forecasts and expected rig counts for the foreseeable future, we determined the carrying amount of certain of our long-lived assets in the Western Hemisphere exceeded their respective fair values due to projected declines in asset utilization, and that the cost of some of our worldwide inventory exceeded its market value. As a result, we recorded corresponding impairments and other charges.

Primarily as a result of the factors described above, we recorded charges of approximately \$33.6 million related to inventory and \$27.4 million related to fixed assets during the three and nine months ended September 30, 2017. We updated our evaluation as of December 31, 2017, and did not require any further adjustment.

8. Goodwill

The changes in the carrying amount of goodwill by reporting unit during the year ended December 31, 2017 were as follows:

	C	arrying Value					Carrying Value
	Ja	nuary 1, 2017	Acquisitions	Fo	oreign Currency Translation	ırchase Price Adjustments	December 31, 2017
				(1	(n thousands)		
Western Hemisphere	\$	26,632	\$ 12,788	\$	587	\$ (849) \$	39,158
Eastern Hemisphere		7,739			727	_	8,466
Asia Pacific		_	_		_	_	
Total	\$	34,371	\$ 12,788	\$	1,314	\$ (849) \$	47,624

At October 1, 2017, the Company performed its annual impairment test on each of its reporting units and concluded that there had been no impairment because the estimated fair values of each of those reporting units exceeded its carrying value. Relevant events and circumstances that could have a negative impact on goodwill include: macroeconomic conditions; industry

and market conditions, such as commodity prices; operating cost factors; overall financial performance; the impact of dispositions and acquisitions; and other entity-specific events. Further declines in commodity prices or sustained lower valuation for the Company's common stock could indicate a reduction in the estimate of reporting unit fair value which, in turn, could lead to an impairment of reporting unit goodwill.

The fair values were determined using the net present value of the expected future cash flows for each reporting unit. During the Company's goodwill impairment analysis, the Company determined the fair value of each of its reporting units as a whole using discounted cash flow analysis, which requires significant assumptions and estimates about the future operations of each reporting unit. The assumptions about future cash flows and growth rates are based on our current budget for 2018 and for future periods, as well as our strategic plans and management's beliefs about future activity levels. The discount rate we used for future periods could change substantially if the cost of debt or equity were to significantly increase or decrease, or if we were to choose different comparable companies in determining the appropriate discount rate for our reporting units. Forecasted cash flows in future periods were estimated using a terminal value calculation, which considered long-term earnings growth rates. There was no impairment of goodwill during the years ended December 31, 2017 and 2016.

9. Intangible Assets

Intangible assets, the majority of which were acquired in the acquisition of TIW and OPT, consist of the following:

		2017						
	Estimated Useful Lives	Gross	Book Value		Accumulated Amortization	Foreign Currenc Translation	y	Net Book Value
					(In thou	ısands)		
Trademarks	indefinite	\$	8,416	\$		\$ 5	6	\$ 8,472
Patents	15 - 30 years		5,946		(968)	8	0	5,058
Customer relationships	5 - 15 years		26,503		(1,675)	(6	54)	24,764
Non-compete agreements	3 years		171		(57)	-	_	114
		\$	41,036	\$	(2,700)	\$ 7	2	\$ 38,408

		2016						
	Estimated Useful Lives	Gross	Book Value	Accumulated Amortization	Foreign Currency Translation	Net Book Value	_	
				(In th	ousands)		_	
Trademarks	indefinite	\$	8,416	-	- \$	\$ 8,416	5	
Patents	15 - 30 years		3,583	(29	4) —	3,289)	
Customer relationships	5 - 15 years		18,057	(16	8) —	17,889)	
		\$	30,056	5 (46	2) \$ —	\$ 29,594	1	

At October 1, 2017, the Company performed its annual impairment test on its indefinite and definite-lived intangible assets and concluded that there had been no impairment because the estimated fair values of each of those intangible assets exceeded its carrying value. Relevant events and circumstances that could have a negative impact on intangible assets include: macroeconomic conditions; industry and market conditions, such as commodity prices; operating cost factors; overall financial performance; the impact of dispositions and acquisitions; and other entity-specific events. Further declines in commodity prices or sustained lower valuation for the Company's common stock could indicate a reduction in the estimate of the intangible assets' fair value which, in turn, could lead to an impairment of the intangible asset.

Amortization expense was \$2.4 million, \$0.2 million and none for 2017, 2016 and 2015, respectively. Based on the carrying value of intangible assets at December 31, 2017, amortization expense for the subsequent five years is estimated to be as follows: 2018—\$2.2 million; 2019—\$2.2 million; 2020—\$2.1 million; 2021—\$2.1 million; and 2022—\$2.1 million.

10. Income Taxes

Income (loss) before income taxes consisted of the following:

Year Ended December .	31.
-----------------------	-----

	Tom Ended Becomber 01,					
	 2017	2016		2015		
	 (I	n thousands)		_		
Domestic	\$ (84,278) \$	33,543	\$	107,158		
Foreign	18,634	82,325		142,613		
Total	\$ (65,644) \$	115,868	\$	249,771		

The income tax provision (benefit) consists of the following:

Year Ended December 31,

	 2017	2016	2015
	 (1	In thousands)	_
Current:			
Federal	\$ 20,435 \$	8,461 \$	33,017
Foreign	(2,671)	15,246	28,229
Total current	17,764	23,707	61,246
Deferred:			
Federal	20,592	1,121	(1,611)
Foreign	(3,361)	(2,181)	(1,872)
Total deferred	17,231	(1,060)	(3,483)
Total	\$ 34,995 \$	22,647 \$	57,763

The difference between the effective income tax rate reflected in the provision for income taxes and the U.S. federal statutory rate was as follows:

Year Ended December 31,

	1041 1	7	
_	2017	2016	2015
Federal income tax statutory rate	35.0 %	35.0%	35.0%
Foreign income tax rate differential	2.4	(11.7)	(7.3)
Foreign development tax incentive	1.8	(0.9)	(1.3)
Manufacturing benefit	_	(1.1)	(1.4)
Foreign intellectual property tax benefit	16.1	(1.0)	(0.8)
Tax Cuts and Jobs Act (TCJA) Transition	(49.7)	_	_
Tax Deferred tax rate change	(20.7)	_	_
Change in valuation allowance	(35.6)	_	_
Other	(2.6)	(0.8)	(1.1)
Effective income tax rate	(53.3)%	19.5%	23.1%

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Significant components of the Company's net deferred tax assets (liabilities) are as follows:

As of December 31,

	2017	2016
	(In thousand	<u>s)</u>
Net current deferred tax assets:	 ,	_
Inventory	\$ 20,816 \$	21,531
Net operating losses	5,380	3,019
Allowance for doubtful accounts	1,200	1,311
Reserve for accrued liabilities	3,177	840
Stock options	3,553	6,052
Other	1,811	867
Net current deferred tax assets	 35,937	33,620
Valuation allowance	\$ (26,445) \$	(3,071)
Net non-current deferred tax liability:		
Property, plant and equipment	(2,618)	(7,899)
Goodwill & Intangibles	(4,161)	(1,653)
Other	(781)	1,699
Net non-current deferred tax liabilities	 (7,560)	(7,853)
Net deferred tax asset	\$ 1,932 \$	22,696

Net operating loss carryforwards totaled \$23.3 million at December 31, 2017. These operating losses will expire as shown in the table below.

Net ope	erating losses	Expiration
	(In tho	usands)
\$	5,132	2019-2024
	6,993	2025-2031
	2,200	2032-2037
	8,995	Indefinite
\$	23,319	

In assessing the realizability of our deferred tax assets, the Company has considered whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. In making this determination we are allowed to consider taxable income in prior years if carryback is permitted, the scheduled reversal of deferred tax liabilities, projected future taxable income and tax planning strategies. Based on the Company anticipating to be in a projected three year cumulative loss at December 31, 2017 in the United States and certain foreign subsidiaries and the inability to generate future taxable income from the four sources outlined, we have determined it is more likely than not that a portion of deferred taxes will not be realized. Therefore, the Company has recorded a valuation allowance at the December 31, 2017 of \$26.4 million.

On December 22, 2017, the US Tax Reform was enacted. US Tax Reform includes a number of changes which will impact our business. These changes include but are not limited to, a reduction in the corporate tax rate from 35% to 21% starting in 2018, the elimination or reduction of certain domestic deductions and credits and limitations on the deductibility of interest expense and executive compensation. US Tax Reform also transitions U.S international taxation from a worldwide tax system to a modified territorial system, which includes base erosion prevention measures on non-U.S. earnings, which may have the effect of subjecting certain earnings of our foreign subsidiaries to U.S. taxation. US Tax Reform also includes a one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017.

Changes in tax rates and tax law are accounted for in the period of enactment. Therefore, during the year ended December 31, 2017, we recorded a charge totaling \$46.2 million for our current estimate related to the provisions of US Tax Reform.

US Tax Reform eliminated the deferral of U.S. income tax on the historical unrepatriated earnings by imposing a transition tax, which is a one-time mandatory deemed repatriation tax on undistributed earnings. The transition tax is assessed on the U.S. shareholder's share of the foreign corporation's accumulated foreign earnings that have not previously been taxed.

Earnings in the form of cash and cash equivalents will be taxed at a rate of 15.5% and all other earnings will be taxed at a rate of 8.0%. As of December 31, 2017, we have accrued income tax liabilities of \$32.6 million under the transition tax.

Our deferred tax assets and liabilities are measured at the rate expected to apply when these temporary differences are expected to be realized or settled.

As our deferred tax assets exceeded the balance of our deferred tax liabilities at the date of enactment, we have recorded an adjustment of \$13.6 million, reflecting the decrease in the U.S. corporate income tax rate and other changes to U.S. tax law. For the GILTI provisions of US Tax Reform, a provisional estimate could not be made as the Company has not yet completed its assessment or elected an accounting policy to either recognize deferred taxes for basis differences expected to reverse as GILTI or to record GILTI as period costs if and when incurred.

The Company is also still evaluating whether to change its indefinite reinvestment assertion in light of US Tax Reform and consider that conclusion to be incomplete under guidance issued by the SEC. If the Company subsequently changes its assertion during the measurement period, the Company will account for the change in assertion as part of the US Tax Reform enactment.

The Company is required to recognize the impact of a tax position that is more likely than not to be sustained upon examination based upon the technical merits of the position, including resolution of any appeals. An evaluation was performed for the tax years which remain subject to examination by major tax jurisdictions as of December 31, 2017, which are the years ended December 31, 2011 through December 31, 2017. The Company has occasionally been assessed interest or penalties by major tax jurisdictions; these assessments historically have not materially impacted the Company's financial results. Interest expense assessed by tax jurisdictions is included with interest expense and assessed penalties are included in selling, general and administrative expenses.

The Company evaluates uncertain tax positions for recognition and measurement in the consolidated financial statements. To recognize a tax position, the Company determines whether it is more likely than not that the tax positions will be sustained upon examination, including resolution of any related appeals or litigation, based on the technical merits of the position. A tax position that meets the more likely than not threshold is measured to determine the amount of benefit to be recognized in the consolidated financial statements. The amount of tax benefit recognized with respect to any tax position is measured as the largest amount of benefit that is greater than 50 percent likely of being realized upon settlement. The Company had an uncertain tax position of \$18.9 million at December 31, 2017 due to uncertainty in special provisions in U.S. and foreign tax jurisdictions.

A reconciliation of the beginning and ending amount of liabilities associated with uncertain tax positions for the year ended December 31, 2017 is as follows:

	2017	
	(In t	housands)
Balance at beginning of year	\$	5,717
Additions for tax positions related to the current year		16,800
Settlements with tax authorities		(3,628)
Balance at end of year	\$	18,889

It is reasonably possible that the Company's existing liabilities for unrecognized tax benefits may increase or decrease in the year ending December 31, 2017, primarily due to the progression of any audits and the expiration of statutes of limitation. However, the Company cannot reasonably estimate a range of potential changes in its existing liabilities for unrecognized tax benefits due to various uncertainties, such as the unresolved nature of any possible audits. As of December 31, 2017, if recognized, \$16.8 million of the Company's unrecognized tax benefits, including interest and penalties, would favorably impact the effective tax rate.

The Company paid \$8.4 million, \$23.0 million and \$61.7 million in income taxes in 2017, 2016 and 2015, respectively.

11. Other Accrued Liabilities

Current other accrued liabilities consist of the following:

	December 31,			
	2017			2016
		(In thou	sands)	_
Payroll taxes	\$	6,591	\$	3,151
Property, sales and other taxes		8,340		6,258
Commissions payable		408		1,424
Accrued vendor costs		7,068		2,185
Accrued warranties		1,535		3,853
Other		1,596		1,245
Total	\$	25,538	\$	18,116

Other long-term liabilities consist of contingent consideration related to the OPT acquisition in the amount of \$2.0 million.

12. Employee Benefit Plans

The Company has a defined-contribution 401(k) plan covering domestic employees and a defined-contribution pension plan covering certain foreign employees. The Company generally makes contributions to the plans equal to each participant's eligible contributions for the plan year up to a specified percentage of the participant's annual compensation. The Company's contribution expense was \$4.3 million, \$4.6 million and \$5.7 million in 2017, 2016 and 2015, respectively.

13. Commitments and Contingencies

The Company leases certain offices, shop and warehouse facilities, automobiles and equipment. Total lease expense incurred was \$6.0 million, \$5.0 million and \$5.1 million in 2017, 2016 and 2015, respectively. Future annual minimum lease commitments at December 31, 2017 are as follows: 2018—\$3.9 million; 2019—\$2.2 million; 2020—\$1.8 million; 2021—\$0.9 million; 2022—\$0.8 million; and thereafter—\$6.2 million.

Brazilian Tax Issue

From 2002 to 2007, the Company's Brazilian subsidiary imported goods through the State of Espirito Santo in Brazil and subsequently transferred them to its facility in the State of Rio de Janeiro. During that period, the Company's Brazilian subsidiary paid taxes to the State of Espirito Santo on its imports. Upon the final sale of these goods, the Company's Brazilian subsidiary collected taxes from customers and remitted them to the State of Rio de Janeiro net of the taxes paid on importation of those goods to the State of Espirito Santo in accordance with the Company's understanding of Brazilian tax laws.

In August 2007, the State of Rio de Janeiro served the Company's Brazilian subsidiary with assessments to collect a state tax on the importation of goods through the State of Espirito Santo from 2002 to 2007 claiming that these taxes were due and payable to it under applicable law. The Company settled these assessments with payments to the State of Rio de Janeiro of \$12.2 million in March 2010 and \$3.9 million in December 2010. Approximately \$7.8 million of these settlement payments were attributable to penalties, interest and amounts that had expired under the statute of limitations so that amount was recorded as an expense. The remainder of the settlement payments generated credits (recorded as a long-term prepaid tax) to be used to offset future state taxes on sales to customers in the State of Rio de Janeiro, subject to certification by the tax authorities. During the second quarter of 2015, the tax authorities certified approximately \$8.3 million of those credits paid in 2010 and granted an additional \$2.3 million in inflation-related credits. The additional amount of credits granted by the tax authorities increased long-term prepaid taxes and decreased selling, general and administrative expenses by \$2.3 million.

In December 2010 and January 2011, the Company's Brazilian subsidiary was served with two additional assessments totaling approximately \$13.0 million from the State of Rio de Janeiro to cancel the credits associated with the tax payments to the State of Espirito Santo (Santo Credits) on the importation of goods from July 2005 to October 2007. The Santo Credits are not related to the credits described above. The Company has objected to these assessments on the grounds that they would represent double taxation on the importation of the same goods and that the Company is entitled to the credits under applicable Brazilian law. With regard to the December 2010 assessment, the Company's Brazilian subsidiary filed an appeal with a State

of Rio de Janeiro judicial court to annul the tax assessment following a ruling against the Company by the tax administration's highest council. In connection with that appeal, the Company was required to deposit with the court approximately \$3.1 million in December 2014 as the full amount of the assessment with penalties and interest. The Company filed a similar appeal in the judicial system with regard to the January 2011 assessment and was required to deposit with the court approximately \$5.7 million in December 2016. The Company believes that these credits are valid and that success in the judicial court process is probable. Based upon this analysis, the Company has not accrued any liability in conjunction with this matter.

Since 2007, the Company's Brazilian subsidiary has paid taxes on the importation of goods directly to the State of Rio de Janeiro and the Company does not expect any similar issues to exist for periods subsequent to 2007.

General

The Company operates its business and markets its products and services in most of the significant oil and gas producing areas in the world and is, therefore, subject to the risks customarily attendant to international operations and dependency on the condition of the oil and gas industry. Additionally, products of the Company are used in potentially hazardous drilling, completion, and production applications that can cause personal injury, product liability and environmental claims. Although exposure to such risk has not resulted in any significant problems in the past, there can be no assurance that ongoing and future developments will not adversely impact the Company.

The Company is also involved in a number of legal actions arising in the ordinary course of business. Although no assurance can be given with respect to the ultimate outcome of such legal action, in the opinion of management, the ultimate liability with respect thereto will not have a material adverse effect on the Company's results of operations, financial position or cash flows.

In 2017, Chevron and its affiliated companies accounted for approximately 14% of the Company's total revenues. In 2016 and 2015, Chevron and its affiliated companies accounted for approximately 16% and 12%, respectively, of the Company's total revenues. No other customer accounted for more than 10% of the Company's total revenues in 2017, 2016 or 2015.

During the fourth quarter of 2017, the Company pursued a restructuring of its entities to prepare it for increased activity in the international markets. The main focus of the restructuring was to create an internal financing capability by taking advantage of excess cash held offshore. The excess foreign cash is now held in a treasury concentration center in the Eastern Hemisphere where it is invested for higher yields when not required to fund international operations. When required, these funds can be easily deployed to meet the working capital requirements of all foreign operations. This structure was put in place as the Company expects that when the market rebounds, future work will come from international markets, especially Europe and Asia Pacific.

The Company's operations are organized into three geographic segments—Western Hemisphere (including North and South America; headquartered in Houston, Texas), Eastern Hemisphere (including Europe and Africa; headquartered in Aberdeen, Scotland) and Asia Pacific (including the Pacific Rim, Southeast Asia, Australia, India and the Middle East; headquartered in Singapore). Each of these segments sells similar products and services and the Company has major manufacturing facilities in all three of its regional headquarter locations as well as in Macae, Brazil.

Eliminations of operating profits are related to intercompany inventory transfers that are deferred until shipment is made to third party customers.

15. Stockholders' Equity

On November 24, 2008, the Board of Directors declared a dividend of one right (a "Right") for each outstanding share of the Company's common stock to stockholders of record at the close of business on December 5, 2008. Each Right entitled the registered holder to purchase from the Company a unit consisting of one one-hundredth of a share (a "Fractional Share") of Series A Junior Participating Preferred Stock, par value \$0.01 per share (the "Preferred Stock"), at a purchase price of \$100 per Fractional Share, subject to adjustment. The Rights were exercisable in the event any person or group acquired 15% or more of the Company's common stock, and until such time were inseparable from and traded with the Company's common stock. The related rights agreement was amended on February 26, 2018 to accelerate the expiration of the Rights from the close of business on November 24, 2018 to the close of business on February 26, 2018, and had the effect of terminating the rights agreement on that date. At the time of the termination of the rights agreement, all of the Rights distributed to holders of the Company's common stock pursuant to the rights agreement expired.

16. Stock-Based Compensation and Stock Awards

On May 13, 2004, the Company's stockholders approved the 2004 Incentive Plan of Dril-Quip, Inc. (as amended in 2012 and approved by the Company's stockholders on May 10, 2012, the "2004 Plan"), which reserved up to 2,696,294 shares of common stock to be used in connection with the 2004 Plan. Persons eligible for awards under the 2004 Plan are employees holding positions of responsibility with the Company or any of its subsidiaries and members of the Board of Directors.

On May 12, 2017, the Company's stockholders approved the 2017 Omnibus Incentive Plan of Dril-Quip, Inc. (the "2017 Plan"), which reserved up to 1,500,000 shares of common stock to be used in connection with the 2017 Plan. Persons eligible for awards under the 2017 Plan are employees with the Company or any of its subsidiaries and members of the Board of Directors.

Stock Options

Options granted under the 2004 Plan have a term of ten years and become exercisable in cumulative annual increments of one-fourth of the total number of shares of common stock subject thereto, beginning on the first anniversary of the date of the grant. No stock options have been granted under the 2017 Plan.

The fair value of stock options granted was estimated on the grant date using the Black-Scholes option pricing model. The expected life was based on the Company's historical trends, and volatility is based on the historical volatility over the expected life of the options. The risk-free interest rate is based on U.S. Treasury yield curve at the grant date. The Company does not pay dividends and, therefore, there is no assumed dividend yield.

Option activity for the year ended December 31, 2017 was as follows:

	Number of Options	eighted rage Price	Intrin	regate sic Value nillions)	Weighted Average Remaining Contractual Life (in years)
Outstanding at December 31, 2016	351,959	\$ 57.66			
Granted		_			
Exercised	(23,247)	31.31			
Forfeited	(48,500)	57.71			
Outstanding at December 31, 2017	280,212	\$ 59.84	\$	0.6	2.9
Exercisable at December 31, 2017	280,212	\$ 59.84	\$	0.6	2.9

The total intrinsic value of stock options exercised in 2017, 2016 and 2015 was \$0.4 million, \$1.0 million and \$0.8 million, respectively. The income tax benefit realized from stock options exercised was \$153,759, \$357,000 and \$263,000 for the years ended December 31, 2017, 2016 and 2015, respectively. There were 21,483 anti-dilutive stock option shares on December 31, 2017.

Stock-based compensation is recognized as selling, general and administrative expense in the accompanying Consolidated Statements of Income. For the years ended December 31, 2017 and December 31, 2016, there was no stock-based compensation expense for stock option awards. For the year ended December 31, 2015, stock-based compensation expense for stock option awards was \$1.1 million. No stock-based compensation expense was capitalized during 2017, 2016 and 2015.

Options granted to employees vest over four years and the Company recognizes compensation expense on a straight-line basis over the vesting period of the options. At December 31, 2017, there was no unrecognized compensation expense related to non-vested stock options as all outstanding options were fully vested.

Restricted Stock Awards

On October 28, 2017 and 2016, pursuant to the 2017 Plan and the 2004 Plan, respectively, the Company awarded officers, directors and key employees restricted stock awards (RSAs), which is an award of common stock subject to time vesting. The awards issued under both the 2017 Plan and the 2004 Plan are restricted as to transference, sale and other disposition. These RSAs vest ratably over a three-year period. The RSAs may also vest in case of a change of control. Upon termination, whether voluntary or involuntary, the RSAs that have not vested will be returned to the Company resulting in stock forfeitures. The fair market value of the stock on the date of grant is amortized and charged to selling, general and administrative expense over the stipulated time period over which the RSAs vest on a straight-line basis, net of estimated forfeitures.

The Company's RSA activity and related information is presented below:

	RSA Number of Shares	Weighted Ave Grant Date I Value Per Sh	Fair
Nonvested balance at December 31, 2016	269,383	\$	57.59
Granted	261,095	4	43.56
Vested	(127,674)		55.31
Forfeited	(5,506)		52.81
Nonvested balance at December 31, 2017	397,298	\$	46.76

RSA compensation expense for the years ended December 31, 2017, 2016 and 2015 totaled \$8.4 million, \$7.2 million and \$6.3 million, respectively . For 2017, 2016 and 2015, the income tax benefit recognized in net income for RSAs was \$1.9 million, \$1.2 million and \$1.8 million, respectively. As of December 31, 2017, there was \$16.7 million of total unrecognized compensation cost related to nonvested RSAs, which is expected to be recognized over a weighted average period of 2.3 years. There were 186,112 anti-dilutive restricted shares on December 31, 2017.

Performance Unit Awards

On October 28, 2017 and 2016, pursuant to the 2017 Plan and the 2004 Plan, the Company awarded performance unit awards (Performance Units) to officers and key employees. The Performance Units were valued based on a Monte Carlo simulation at \$54.64 for the 2017 grants and \$53.46 for the 2016 grants, approximately 131.7% and 110.3%, respectively, of the grant share price. Under the plans, participants may earn from 0% to 200% of their target award based upon the Company's relative total share return (TSR) in comparison to the 15 component companies of the Philadelphia Oil Service Index.

The TSR is calculated over a three-year period from October 1, 2016 and 2017 to September 30, 2019 and 2020, respectively, and assumes reinvestment of dividends for companies within the index that pay dividends, which Dril-Quip does not. Assumptions used in the Monte Carlo simulation are as follows:

	2017	2016
Grant date	October 28, 2017	October 28, 2016
Performance period	October 1, 2017 to September 30, 2020	October 1, 2016 to September 30, 2019
Volatility	34.0%	32.5%
Risk-free interest rate	1.7%	1.0%
Grant date price	\$41.50	\$48.45

The Company's Performance Unit activity and related information is presented below:

	Number of Performance Units	Weighted Average Grant Date Fair Value Per Unit
Nonvested balance at December 31, 2016	196,219	\$ 78.42
Granted	122,810	54.64
Vested	(52,444)	126.84
Forfeited	(2,311)	126.84
Nonvested balance at December 31, 2017	264,274	\$ 59.97

Performance Unit compensation expense was \$5.4 million for the year ended December 31, 2017, \$4.6 million for 2016 and \$4.5 million for 2015. For 2017, 2016 and 2015, the income tax benefit recognized in net income for Performance Units was \$0.8 million, \$0.5 million and \$1.1 million, respectively. As of December 31, 2017, there was \$10.2 million of total unrecognized compensation expense related to nonvested Performance Units which is to be recognized over a weighted average period of 2.2 years. There were 159,810 anti-dilutive Performance Units at December 31, 2017.

Director Stock Compensation Awards

In June 2014, the Board of Directors authorized a stock compensation program for the directors pursuant to the 2004 Plan. This program continues under the 2017 Plan. Under this program, the Directors may elect to receive all or a portion of their fees in the form of restricted stock awards (DSA) in an amount equal to 125% of the fees in lieu of cash. The awards are made quarterly on the first business day after the end of each calendar quarter and vest on January 1 on the second year after the grant date.

The Company's DSA activity for the year ended December 31, 2017 is presented below:

	DSA Number of Shares	Weighted Average Grant Date Fair Value Per Share
Nonvested balance at December 31, 2016	13,422	\$ 62.46
Granted	9,340	51.58
Vested	(5,248)	68.70
Forfeited	_	_
Nonvested balance at December 31, 2017	17,514	\$ 54.80

Director stock compensation awards expense for 2017 was \$462,948 as compared to \$405,000 for 2016 and \$328,000 for 2015. For 2017, 2016 and 2015, the income tax benefit recognized in net income for DSAs was \$115,002, \$19,000 and \$41,000, respectively. There was \$301,934 of unrecognized compensation expense related to nonvested DSAs, which is expected to be recognized over a weighted average period of one year. There were 7,703 anti-diluted DSA shares on December 31, 2017.

The following table summarizes information for equity compensation plans in effect as of December 31, 2017:

	Number of securities to be issued upon exercise of outstanding options (1)	Weighted- exercise outstar optic	price of iding	Number of securities remaining available for future issuance under equity compensation plan (excluding securities reflected in column (a))
Plan category	(a)	(b)	(c)
Equity compensation plans approved by stockholders				
Stock options	280,212	\$	59.84	198,472
Total	280,212	\$	59.84	198,472

⁽¹⁾ Excludes 414,812 shares of unvested RSAs and DSAs and 264,274 of unvested Performance Units, which were granted pursuant to the 2017 Plan and the 2004 Plan, both of which were approved by the stockholders.

17. Earnings Per Share

The following is a reconciliation of the basic and diluted earnings per share computation.

	Year Ended December 31,					
		2017		2016		2015
		(In thousar	ds, ex	cept per shar	e amounts)	
Net income (loss)	\$	(100,639)	\$	93,221	\$	192,008
Weighted average basic common shares outstanding		37,457		37,537		38,364
Effect of dilutive securities - stock options and awards				130		167
Total shares and dilutive securities		37,457		37,667		38,531
Basic earnings (loss) per common share	\$	(2.69)	\$	2.48	\$	5.00
Diluted earnings (loss) per common share	\$	(2.69)	\$	2.47	\$	4.98

For the years ended December 31, 2017, 2016 and 2015, the Company has excluded the following common stock options and awards because their impact on the loss per share is anti-dilutive (in thousands on a weighted average basis):

	Year Ended December 31,			
	2017	2015		
	(I	(n thousands)		
Director stock awards	8	2	2	
Stock options	21		_	
Performance share units	160	64	61	
Restricted stock awards	186	110	97	

18. Stock Repurchase Plan

On July 26, 2016, the Board of Directors authorized a stock repurchase plan under which the Company can repurchase up to \$100 million of its common stock. The repurchase plan has no set expiration date and any repurchased shares are expected to be cancelled. No repurchases have been made pursuant to this plan during 2017.

19. Quarterly Results of Operations (Unaudited):

⁽¹⁾ The sum of the quarterly per share amounts may not equal the annual amount reported, as per share amounts are computed independently for each quarter and for the full year.

20. Subsequent Events

New ABL Credit Facility

On February 23, 2018, the Company, as borrower, and the Company's subsidiaries TIW Corporation and Honing, Inc., as guarantors, entered into a five-year senior secured revolving credit facility (the "New ABL Credit Facility") with JPMorgan Chase Bank, N.A., as administrative agent, and other financial institutions as lenders with total commitments of \$100.0 million, including up to \$10.0 million available for letters of credit. The maximum amount that the Company may borrow under the New ABL Credit Facility is subject to the borrowing base, which is based on a percentage of eligible accounts receivable and eligible inventory, subject to reserves and other adjustments.

All obligations under the New ABL Credit Facility are fully and unconditionally guaranteed jointly and severally by the Company, TIW, Honing, Inc., and future significant domestic subsidiaries, subject to customary exceptions. Borrowings under the New ABL Credit Facility are secured by liens on substantially all of the Company's personal property, and bear interest at the Company's option at either (i) the CB Floating Rate (as defined therein), calculated as the rate of interest publicly announced by JPMorgan Chase Bank, N.A., as its "prime rate," subject to each increase or decrease in such prime rate effective as of the date such change occurs, with such CB Floating Rate not being less than Adjusted One Month LIBOR Rate (as defined therein) or (ii) the Adjusted LIBO Rate (as defined therein), plus, in each case, an applicable margin. The applicable margin ranges from 1.00% to 1.50% per annum for CBFR loans and 2.00% to 2.50% per annum for Eurodollar loans and, in each case, is based on the Company's leverage ratio. The unused portion of the New ABL Credit Facility is subject to a commitment fee that varies from 0.250% to 0.375% per annum, according to average unused commitments under the New ABL Credit Facility. Interest on Eurodollar loans is payable at the end of the selected interest period, but no less frequently than quarterly. Interest on CB Floating Rate loans is payable monthly in arrears.

The New ABL Credit Facility contains various covenants and restrictive provisions which limit the Company's ability to, among other things, (1) enter into asset sales; (2) incur additional indebtedness; (3) make investments or loans and create liens; (4) pay certain dividends or make other distributions and (5) engage in transactions with affiliates. The New ABL Credit Facility also requires the Company to maintain a fixed charge coverage ratio based on the ratio of EBITDA (as defined therein)

to Fixed Charges (as defined therein) during certain periods, including when availability under the New ABL Credit Facility is under certain levels. If the Company fails to perform its obligations under the agreement that results in an event of default, the commitments under the New ABL Credit Facility could be terminated and any outstanding borrowings under the New ABL Credit Facility may be declared immediately due and payable. The New ABL Credit Facility also contains cross default provisions that apply to the Company's other indebtedness. The Company is in compliance with the related covenants as of February 27, 2018.

As of February 27, 2018, the Company had no borrowings outstanding under the New ABL Credit Facility no letters of credit outstanding under the New ABL Credit Facility and availability of \$71.0 million.

Termination of Rights Agreement

On February 26, 2018, the Company entered into Amendment No. 1 (the "Amendment") to the Rights Agreement (the "Rights Agreement"), dated as of November 24, 2008, by and between the Company and Computershare Inc., as successor-in-interest to Computershare Shareowner Services LLC (formerly known as Mellon Investor Services LLC), as rights agent. The Amendment accelerated the expiration of the Company's rights to purchase Series A Junior Participating Preferred Stock, par value \$0.01 per share (the "Rights"), from 5:00 p.m., New York City time, on November 24, 2018 to 5:00 p.m., New York City time, on February 26, 2018, and had the effect of terminating the Rights Agreement on that date. At the time of the termination of the Rights Agreement, all of the Rights distributed to holders of the Company's common stock pursuant to the Rights Agreement expired.

Restated Certificate of Incorporation

On February 26, 2018, the Company filed with the Secretary of State of the State of Delaware a restated certificate of incorporation as adopted by the Board of Directors. The restated certificate of incorporation did not further amend the Company's existing certificate of incorporation and only restates and integrates into a single instrument all prior amendments to the existing certificate of incorporation.

Immediately prior to filing the above-referenced restated certificate of incorporation on February 26, 2018, the Company filed a Certificate of Elimination with the Delaware Secretary of State to eliminate the Series A Junior Participating Preferred Stock. No shares of such securities were outstanding or will be issued. Copies of the Restated Certificate of Incorporation and Certificate of Elimination are filed as Exhibits 3.1 and 3.2.

New Contract in the First Quarter of 2018

In February 2018, the Company was awarded a contract to supply top tensioned riser (TTR) systems and related services for the development of the CA Rong Do Project located offshore Vietnam operated by Repsol with the participation of Mubadala, PVEP and PetroVietnam. The project will be in our Asia Pacific region and will affect our bookings in the backlog disclosure for the first quarter of 2018.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

In accordance with Exchange Act Rules 13a-15 and 15d-15, the Company carried out an evaluation, under the supervision and with the participation of management, including the Company's Chief Executive Officer and Chief Financial Officer, of the effectiveness of the Company's disclosure controls and procedures as of the end of the period covered by this report. Based on that evaluation, the Company's Chief Executive Officer and Chief Financial Officer concluded that the Company's disclosure controls and procedures were effective as of December 31, 2017 to provide reasonable assurance that information required to be disclosed in the Company's reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms, and such information is accumulated and communicated to management, including the Company's Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding disclosure.

"Management's Annual Report on Internal Control over Financial Reporting" appears on page 48 of this Annual Report on Form 10-K.

There has been no change in the Company's internal controls over financial reporting that occurred during the three months ended December 31, 2017 that has materially affected, or is reasonably likely to materially affect, the Company's internal controls over financial reporting.

Item 9B. Other Information

New ABL Credit Facility

On February 23, 2018, we, as borrower, and our subsidiaries TIW and Honing, Inc., as guarantors, entered into a five-year senior secured revolving credit facility (the "New ABL Credit Facility") with JPMorgan Chase Bank, N.A., as administrative agent, and other financial institutions as lenders with total commitments of \$100.0 million, including up to \$10.0 million available for letters of credit. The maximum amount that we may borrow under the New ABL Credit Facility is subject to the borrowing base, which is based on a percentage of eligible accounts receivable and eligible inventory, subject to reserves and other adjustments.

All obligations under the New ABL Credit Facility are fully and unconditionally guaranteed jointly and severally by the Company, TIW, Honing, Inc.,and future significant domestic subsidiaries, subject to customary exceptions. Borrowings under the New ABL Credit Facility are secured by liens on substantially all of our personal property, and bear interest at our option at either (i) the CB Floating Rate (as defined therein), calculated as the rate of interest publicly announced by JPMorgan Chase Bank, N.A., as its "prime rate," subject to each increase or decrease in such prime rate effective as of the date such change occurs with such CB Floating Rate not being less than Adjusted One Month LIBOR Rate (as defined therein, or (ii) the Adjusted LIBO Rate (as defined therein), plus, in each case, an applicable margin. The applicable margin ranges from 1.00% to 1.50% per annum for CBFR loans and 2.00% to 2.50% per annum for Eurodollar loans and, in each case, is based on our leverage ratio. The unused portion of the New ABL Credit Facility is subject to a commitment fee that varies from 0.250% to 0.375% per annum, according to average unused commitments under the New ABL Credit Facility. Interest on Eurodollar loans is payable at the end of the selected interest period, but no less frequently than quarterly. Interest on CB Floating Rate loans is payable monthly in arrears.

The New ABL Credit Facility contains various covenants and restrictive provisions which limit our ability to, among other things, (1) enter into asset sales; (2) incur additional indebtedness; (3) make investments or loans and create liens; (4) pay certain dividends or make other distributions and (5) engage in transactions with affiliates. The New ABL Credit Facility also requires us to maintain a fixed charge coverage ratio based on the ratio of EBITDA (as defined therein) to Fixed Charges (as defined therein) during certain periods, including when availability under the New ABL Credit Facility is under certain levels. If we fail to perform our obligations under the agreement that results in an event of default, the commitments under the New ABL Credit Facility could be terminated and any outstanding borrowings under the New ABL Credit Facility may be declared immediately due and payable. The New ABL Credit Facility also contains cross default provisions that apply to our other indebtedness. We are in compliance with the related covenants as of February 27, 2018.

As of February 27, 2018, the Company had no borrowings outstanding under the New ABL Credit Facility no letters of credit outstanding under the New ABL Credit Facility and availability of \$71.0 million.

Termination of Rights Agreement

On February 27, 2018, the Company entered into Amendment No. 1 (the "Amendment") to the Rights Agreement (the "Rights Agreement"), dated as of November 24, 2008, by and between the Company and Computershare Inc., as successor-in-

interest to Computershare Shareowner Services LLC (formerly known as Mellon Investor Services LLC), as rights agent. The Amendment accelerated the expiration of the Company's rights to purchase Series A Junior Participating Preferred Stock, par value \$0.01 per share (the "Rights"), from 5:00 p.m., New York City time, on November 24, 2018 to 5:00 p.m., New York City time, on February 27, 2018, and had the effect of terminating the Rights Agreement on that date. At the time of the termination of the Rights Agreement, all of the Rights distributed to holders of the Company's common stock pursuant to the Rights Agreement expired.

Restated Certificate of Incorporation

On February 27, 2018, the Company filed with the Secretary of State of the State of Delaware a restated certificate of incorporation as adopted by the Board of Directors. The restated certificate of incorporation did not further amend the Company's existing certificate of incorporation and only restates and integrates into a single instrument all prior amendments to the existing certificate of incorporation.

Immediately prior to filing the above-referenced restated certificate of incorporation on February 27, 2018, the Company filed a Certificate of Elimination with the Delaware Secretary of State to eliminate the Series A Junior Participating Preferred Stock. No shares of such securities were outstanding or will be issued. Copies of the Restated Certificate of Incorporation and Certificate of Elimination are filed as Exhibits 3.1 and 3.2.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

The information required by this item is set forth under the captions "Election of Directors," "Corporate Governance Matters" and "Section 16(a) Beneficial Ownership Reporting Compliance" in the Company's definitive Proxy Statement (the "2018 Proxy Statement") for its annual meeting of stockholders to be held on May 11, 2018, which sections are incorporated herein by reference.

Pursuant to Item 401(b) of Regulation S-K, the information required by this item with respect to executive officers of the Company is set forth in Part I of this report.

Item 11. Executive Compensation

The information required by this item is set forth in the sections entitled "Director Compensation," "Executive Compensation" and "Corporate Governance Matters" in the 2018 Proxy Statement, which sections are incorporated herein by reference.
