## Invibio® Biomaterial Solutions Division

Invibio Biomaterial Solutions ('Invibio') is an established, worldwide leader in biomaterial solutions for the surgical and medical device markets. Invibio is committed to providing dependable, specialised and comprehensive resources to help medical device manufacturers realise accelerated market success across multiple targeted markets.

### Our Brands

### Our Markets

#### Spine

#### Spinal Fusion

Invibio's biomaterials continue to be extensively used to treat spinal disorders. Within spinal fusion, the combination of numerous clinical studies and Invibio's focus has increased our share in both lumbar and cervical fusion.

#### Spinal Non-fusion

During 2010, Invibio continued to see strong usage in a diverse range of demanding applications in the spinal non-fusion market, aimed at maintaining mobility in the spine.

### Developing Markets

#### Arthroscopy

Strength, imaging capability and ease of revision has helped drive Invibio's considerable growth in shoulder arthroscopic repair and, more recently, increased use in knee arthroscopy treatments aimed at soft tissue and ligament repair.

#### Target Markets

As device manufacturers seek solutions that reduce surgical complications and operating time, we continue to identify further areas where our materials can provide improvements in the clinical success rates of a wide range of emerging medical device applications.
