**Western Asset Mortgage Capital Corporation****Letter to Stockholders**

Dear Fellow Stockholders:

On behalf of the entire Western Asset Mortgage Capital Corporation team, it is my pleasure to address you in our third Annual Report and to review our performance for the year.

As we look back on 2014, we are extremely proud of our accomplishments. We delivered solid results in each quarter and an economic return on book value of 15.8% for the full year (calculated as change in book value over the year plus dividends) outperforming the majority of mortgage REITs. We generated these results despite another turbulent year for the US fixed-income and mortgage markets. As the year progressed, interest rate volatility increased driven by the crosscurrents of a gradually improving US economy versus weakening economic conditions in Europe and Asia and lower oil prices. These volatile swings in the yield of the 10-year US Treasury Note often spilled over into the mortgage markets, causing mortgage spreads to move dramatically as well.

Our strong performance reflects the continued implementation of our strategy to build a more diversified portfolio with a higher portion of credit sensitive investments. Our financial results also speak to our ability to take advantage of relative value opportunities across the entire mortgage sector through our proactive approach to portfolio management. As we have previously discussed, although not material to last year's results, we now have a platform which enables us to invest in structures that provide exposure to residential and commercial mortgage whole loans. Our success reflects the significant competitive advantages provided from having access to the world-class investment platform of our Manager, Western Asset Management Company, where we are able to draw upon the experience of a full team of experts across a number of sectors in the mortgage market and the broader fixed income and credit markets. We continue to believe that our relationship with Western Asset makes us unique among our peer group and directly benefits you, our stockholders.

The past year was also important year for us with respect to the capital markets. In the second quarter, we completed a successful follow-on offering of our shares, raising a total of approximately \$215 million. Included in this amount was an additional investment in the Company by Western Asset of approximately \$10 million. The offering was accretive, on a book value basis, to existing stockholders and increased the market capitalization of the Company by approximately 50%. The new capital enabled us to accelerate our portfolio diversification strategy, to the benefit of both our new shareholders, as well as our longer-term holders. In addition, it has lowered our administrative expenses on a relative basis, as we are able to leverage our fixed costs over a larger capital base. As we have stated since our inception, we will never grow strictly for growth sake, but only when it is accretive on a book value basis and in the best interests of our existing stockholders.

A report from our Manager follows with additional commentary on our investment strategy and our portfolio, as well as analysis of the overall mortgage market. We encourage you to review the financial statements

which make up part of our Annual Report included herein and note in particular the risk factors related to our business contained in the Form 10-K.

Going forward, we are optimistic about our opportunities which we continue to see in the mortgage and fixed income markets to generate a strong total return for our stockholders. We believe we are well positioned within the mortgage REIT sector given our significant competitive advantages in a number of key areas:

- Active portfolio management enables us to be nimble and quickly adjust the portfolio to gain exposure to the asset classes and specific securities that we believe present the best relative value opportunities at any given point in time
- We have the ability to leverage Western Asset's expertise across the entire mortgage spectrum, which enhances our ability to further diversify the portfolio, including continuing to expand our residential and commercial whole loan strategy
- We have longstanding relationships with repo counterparties—both domestically and internationally—and an ample amount of repo availability, which significantly mitigates our funding risk

Our goal at Western Asset Mortgage Capital remains unchanged from the time we came public in May 2012—to maximize total return for our stockholders by generating an attractive dividend and simultaneously delivering a relatively stable book value. We thank you for your continued support.

Sincerely,

Gavin L. James  
President and Chief Executive Officer

## 2014 Investment Review

by Western Asset Management Company

The past year for the US mortgage markets was once again marked by volatility and uncertainty. Many believed at the outset of the year that interest rates would increase during the year, based on an improving US economy and the Federal Reserve (Fed) moving towards a more normalized monetary policy. As it turned out, global forces put downward pressure on interest rates and the yield curve flattened over the course of the year, with the 10-year Treasury rate dropping by over 80 basis points (bps), with most of the move occurring in the fourth quarter. Against this backdrop, the Agency residential mortgage-backed securities (RMBS) market generally performed well in 2014. However, liability hedges, which are held by most mortgage REITs as part of their levered Agency strategy, underperformed relative to the increase in the value of Agency assets, creating a modest drag on industry performance, particularly at year-end. The Non-Agency RMBS sector also generated positive returns for the year, as the US housing market continued to improve, albeit at a slower pace, and the US economy grew modestly. In addition, commercial mortgage-backed securities (CMBS) performed well during the year, based on the ongoing improvement in commercial real estate markets both domestically and abroad.

Despite the volatile market conditions, we were able to outperform a majority of the mortgage REITs for the year (as measured by total economic return on book value). The two primary factors that we attribute to our performance are:

- Our proactive management style and investment approach, which allowed us the flexibility to capitalize on opportunities across the entire mortgage market. As mortgage spreads widened at various times during the year, we increased our exposure to Agency "to-be-announced" forward contracts (TBAs), given our view at the time that the mortgage market was over-sold. As an example, in early October, when the 10-year Treasury rate dropped by roughly 30 bps in two weeks, we increased our TBA holdings and subsequently benefitted from a tightening in spreads that occurred through the end of the year, generating a significant amount of "drop" income in the fourth quarter.
- Our ongoing strategy to diversify our portfolio and supplement our Agency holdings with a higher portion of credit sensitive investments. Throughout the year we continued to shift our portfolio towards credit and tactically re-allocated our positions within the Non-Agency space to sectors where we believed we could achieve better hedge adjusted returns, such as in US and European CMBS mezzanine tranches and GSE credit risk transfer securities. In addition, during the fourth quarter we made progress towards implementing our residential whole loan strategy, making our first investments in residential mortgage whole loans.

## 2015 Outlook

Our outlook for the current year is that interest rates will be range-bound at the long-end of the curve, but will likely remain somewhat volatile based on developments in Europe and Asia and the bond market's perception of when the Fed will begin to return to a more normalized monetary policy. We believe that short-term rates will remain near zero until at least late summer, and then only gradually increase from there. This view is based on our belief that economic growth in the US will remain modest over the next several quarters, and that the Fed will continue to err on the side of caution when it finally decides to increase short term rates.

Given these views, we believe that the Agency RMBS market will continue to offer attractive risk-adjusted returns and we continue to favor a core position in prepayment protected specified pools supplemented by exposure to the TBA market when market conditions warrant such a stance. We also believe that both the Non-Agency RMBS and CMBS markets will perform well in 2015 based on the improving economy and the underlying real estate fundamentals.

We anticipate increasing our exposure to residential mortgage whole loans. We will be focusing on high credit quality Non-QM mortgages where we believe we can earn higher net interest spreads without taking on incremental credit risk. We are expanding our sourcing capabilities in this area and have also made our first investment in commercial real estate whole loans. The actual investment we make in any asset class over time will depend on market conditions, our investment outlook and external factors that impact our investments.

Based on current market conditions and our outlook, we plan to continue to proactively manage our portfolio by monitoring the relative value of opportunities across the broad mortgage universe, in an effort to achieve an optimal risk-adjusted total economic return. We believe this approach is the best way to pursue our objective of strong core earnings and an attractive dividend, while maintaining a relatively stable book value per share, with the overall goal of enhancing stockholder value.

**FORWARD-LOOKING INFORMATION**

The Company makes forward-looking statements herein and will make forward-looking statements in future filings with the Securities and Exchange Commission (the “SEC”), press releases or other written or oral communications within the meaning of Section 27A of the Securities Act of 1933, as amended (the “Securities Act”), and Section 21E of the Securities Exchange Act of 1934, as amended (the “Exchange Act”). For these statements, the Company claims the protections of the safe harbor for forward-looking statements contained in such sections. Forward-looking statements are subject to substantial risks and uncertainties, many of which are difficult to predict and are generally beyond the Company’s control. These forward-looking statements include information about possible or assumed future results of the Company’s business, financial condition, liquidity, results of operations, plans and objectives. When the Company uses the words “believe,” “expect,” “anticipate,” “estimate,” “plan,” “continue,” “intend,” “should,” “may” or similar expressions, the Company intends to identify forward-looking statements. Statements regarding the following subjects, among others, may be forward-looking: market trends in the Company’s industry, interest rates, real estate values, the debt securities markets, the U.S. housing and the U.S. and foreign commercial real estate markets or the general economy or the demand for residential and/or commercial mortgage loans; the Company’s business and investment strategy; the Company’s projected operating results; actions and initiatives of the U.S. Government and changes to U.S. Government policies and the execution and impact of these actions, initiatives and policies; the state of the U.S. and to a lesser extent, international economy generally or in specific geographic regions; economic trends and economic recoveries; the Company’s ability to obtain and maintain financing arrangements, including securitizations; the current potential return dynamics available in residential mortgage-backed securities (“RMBS”), and commercial mortgage-backed securities (“CMBS” and collectively with RMBS, “MBS”); the level of government involvement in the U.S. mortgage market; the anticipated default rates on Agency and Non-Agency MBS (as defined herein); the loss severity on Non-Agency MBS; the return of the Non-Agency RMBS, CMBS and asset-backed securities (“ABS”) securitization markets; the general volatility of the securities markets in which the Company participates; changes in the value of the Company’s assets; the Company’s expected portfolio of assets; the Company’s expected investment and underwriting process; interest rate mismatches between the Company’s target assets and any borrowings used to fund such assets; changes in interest rates and the market value of the Company’s target assets; changes in prepayment rates on the Company’s target assets; effects of hedging instruments on the Company’s target assets; rates of default or decreased recovery rates on the Company’s target assets; the degree to which the Company’s hedging strategies may or may not protect the Company from interest rate and foreign currency volatility; the impact of and changes in governmental regulations, tax law and rates, accounting guidance and similar matters; the Company’s ability to maintain the Company’s qualification as a real estate investment trust for U.S. federal income tax purposes; the Company’s ability to maintain its exemption from registration under the Investment Company Act of 1940, as amended (the “1940 Act”); the availability of opportunities to acquire Agency RMBS, Non-Agency RMBS, CMBS, residential and/or commercial mortgage loans and other mortgage assets; the availability of opportunities to acquire ABS ; the availability of qualified personnel; estimates relating to the Company’s ability to make distributions to its stockholders in the future; and the Company’s understanding of its competition.

The forward-looking statements are based on the Company’s beliefs, assumptions and expectations of its future performance, taking into account all information currently available to it. Forward-looking statements are not predictions of future events. These beliefs, assumptions and expectations can change as a result of many possible events or factors, not all of which are known to the Company. Some of these factors, are described in “Risk Factors” and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” of this annual report on Form 10-K. These and other risks, uncertainties and factors, including those described in the annual, quarterly and current reports that the Company files with the SEC, could cause its actual results to differ materially from those included in any forward-looking statements the Company makes. All forward-looking statements speak only as of the date they are made. New risks and uncertainties arise over time and it is not possible to predict those events or how they may affect the Company. Except as required by law, the Company is not obligated to, and does not intend to, update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

## Part I

### Item 1. Business.

#### Overview

Western Asset Mortgage Capital Corporation and Subsidiaries (the “Company” unless otherwise indicated or except where the context otherwise requires “we”, “us” or “our”) upon commencing operations in May 2012, had an initial investment strategy which was primarily focused on investing in, financing and managing Agency RMBS (including TBAs as defined herein). Over time, we have expanded our investment strategy to include both Non-Agency RMBS and subsequently Agency and Non-Agency CMBS. In addition, and to a significantly lesser extent, we have invested in other securities including certain Agency obligations that are not technically MBS as well as certain Non U.S. CMBS and ABS investments secured by a portfolio private student loans and interests in residential whole-loans. These changes in our investment strategy, including future changes, are based on our Manager’s perspective of which mix of portfolio assets it believes provides us with the best risk-reward opportunities at any given time. We have and expect to continue to finance our investment portfolio primarily through the use of repurchase agreements.

We operate and elected to be taxed as a real estate investment trust (“REIT”), commencing with our taxable year ended December 31, 2012. We generally will not be subject to U.S. federal income taxes on our taxable income to the extent that we annually distribute, in accordance with the REIT regulations, all of our net taxable income to stockholders and maintain our intended qualification as a REIT. We also intend to operate our business in a manner that will permit us to maintain our exemption from registration under the Act.

Our consolidated financial statements include our accounts, those of our wholly owned taxable REIT subsidiary or “TRS” and a trust that meets the definition of a variable interest entity (“VIE”) related to the acquisition of residential whole-loans in which we are the primary beneficiary. The trust has issued trust certificates to us which are collateralized by pools of residential mortgage loans held by the trust. We include the underlying residential whole-loans owned by the trust in Residential whole-loans at fair value on our Consolidated Balance Sheets and have eliminated the trust certificates in consolidation.

We are externally managed and advised by Western Asset Management Company (“WAM”, or the “Manager”), an SEC-registered investment advisor and a wholly-owned subsidiary of Legg Mason, Inc. Our Manager is responsible for administering our business activities and our day-to-day operations, subject to the supervision of our Board of Directors.

In light of the aforementioned developments and given our Manager’s current market outlook and investment view, while we expect that Agency RMBS will continue to be a significant part of our portfolio, Agency RMBS will not necessarily be our primary investment in the future. Going forward, our Manager may vary the allocation among various asset classes subject to maintaining our qualification as a REIT under the federal tax law and maintaining our exemption from the 1940 Act. These restrictions limit our ability to invest in non-real estate assets and/or assets which are not secured by real estate. Accordingly, our portfolio will continue to be principally invested in MBS as well as other assets secured by real estate.

On April 3, 2014, we entered into a binding agreement with a group of underwriters to sell an incremental 13.0 million shares of our common stock, which closed on April 9, 2014. The agreement provided the underwriters with the right to purchase an additional 1.95 million shares (15% of 13.0 million) during the succeeding thirty (30) days. The shares were offered to the market at a price of \$14.85 per share and the underwriters exercised a portion of their option and purchased an incremental 1.0 million shares on May 2, 2014, which closed on May 7, 2014. We received net proceeds of approximately \$205.4 million after subtracting underwriting commissions and offering expenses of approximately \$2.9 million. On April 3, 2014, we also entered into an agreement to sell 650,000 shares of our common stock, for \$14.85 per share, to our Manager in a private placement for an aggregate offering price of approximately \$9.7 million, which closed on April 9, 2014.

We have invested the proceeds of our IPO, concurrent private placements and follow-on public offerings primarily in Agency RMBS, including Mortgage pass-through certificates, Agency derivatives, Agency Interest-Only Strips, and Agency CMOs; Non-Agency RMBS; Agency, Non-Agency and Non U.S. CMBS; ABS as well as residential whole-loans. We have also used “to-be-announced” forward contracts, or TBAs, in order to invest in Agency RMBS. Pursuant to these TBAs, we agree to purchase (or deliver), for future settlement, Agency RMBS with certain principal and interest terms. At December 31, 2014, our portfolio was comprised of approximately \$3.2 billion of Agency RMBS (including approximately \$257.6 million of Agency Interest-Only Strips), approximately \$671.0 million of Non-Agency RMBS (including approximately \$74.1 million of Non-Agency Interest-Only Strips), approximately \$44.2 million of Agency CMBS (including approximately \$18.8 million of Agency CMBS Interest-Only Strips), approximately \$393.8 million of Non-Agency CMBS, approximately \$108.9 million of other securities and approximately \$7.2 million of residential whole-loans, exclusive of linked transactions. In addition, at December 31, 2014, our linked transactions included approximately \$8.2 million of Non-Agency RMBS, approximately \$38.6 million of Non-Agency CMBS (including Non U.S. CMBS) and approximately \$5.7 million of other securities. To comply with the REIT requirements, some of our investments were held in a taxable REIT subsidiary or “TRS”. By acquiring investments or engaging in activities through the TRS, it enables us to engage in such activities without endangering our REIT status. These investments or activities are not held or conducted at the REIT level and as a result would not impact our ability to maintain our qualification as a REIT.

We use leverage, currently consisting of borrowings under repurchase agreements, as part of our business strategy in order to increase potential returns to stockholders. We accomplish this by borrowing against existing MBS and other securities through repurchase agreements. There are no limits on the maximum amount of leverage that we may use, and we are not required to maintain any particular debt-to-equity leverage ratio under our charter. We may also change our financing strategy and leverage without the consent of stockholders.

As of December 31, 2014, we had entered into master repurchase agreements with 24 counterparties. As of December 31, 2014, we had approximately \$3.9 billion of borrowings, including borrowings on linked transactions, outstanding under our repurchase agreements collateralized by approximately \$4.4 billion of MBS and other securities. The balance outstanding at December 31, 2014 includes approximately \$31.9 million related to linked transactions collateralized by approximately \$52.5 million of MBS and other securities and \$4.9 million of borrowings related to residential whole-loans owned through trust certificates of approximately \$7.2 million. The trust certificates are eliminated upon consolidation. We have entered into swaps to effectively fix the interest rate of our borrowings; net of variable-rate payment swaps, of approximately \$1.4 billion, under our repurchase agreements, and excluding forward starting swaps of \$2.2 billion. In addition, as of December 31, 2014, we also owned swaptions on approximately an incremental \$105.0 million of borrowings. As of December 31, 2014, our aggregate debt-to-equity ratio was approximately 6.3 to 1, including repurchase agreements on linked transactions and 6.2 to 1, excluding repurchase agreements on linked transactions.

## Our Investment Strategy

Our Manager's investment philosophy, which developed from a singular focus in fixed-income asset management over a variety of credit cycles and conditions, is to provide clients with diversified, tightly controlled, long-term value-oriented portfolios. Through rigorous analysis of all sectors of the fixed-income market, our Manager seeks to identify assets with the greatest risk-adjusted total value potential. In making investment decisions on our behalf, our Manager incorporates its views on the economic environment and the outlook for the mortgage markets, including relative valuation, supply and demand trends, the level of interest rates, the shape of the yield curve, prepayment rates, financing and liquidity, commercial and residential real estate prices, delinquencies, default rates, recovery of various segments of the economy and vintage of collateral, subject to maintaining our REIT qualification and our exemption from registration under the 1940 Act. We benefit from the breadth and depth of our Manager's overall investment philosophy, which focuses on a macroeconomic analysis as well as an in-depth analysis of individual assets and their relative value.

We rely on our Manager's expertise in asset allocation and identifying attractive assets within our investment strategy. At the time of our IPO, our core investment strategy was focused primarily on Agency RMBS. Our Manager's expertise in related investment disciplines such as Non-Agency RMBS, CMBS, and ABS has provided us with ability to include Non-Agency RMBS, Agency and Non-Agency CMBS, Non U.S. CMBS, ABS and other structured securities, as well as, providing valuable investment insights to our Agency RMBS investment selection and strategy.

We currently purchase and sell Agency RMBS (including TBAs) and Non-Agency RMBS, Agency and Non-Agency CMBS, Non U.S. CMBS, ABS as well as other structured securities, whole-loans and whole-loan securities. Currently, our Manager expects to expand our purchase of Non-Agency RMBS, Agency and Non-Agency CMBS, Non U.S. CMBS and ABS as well as expand our investment in whole-loans and whole-loan securities. We do not have specific investment guidelines providing for precise minimum or maximum allocations to any sector other than those necessary for maintaining our qualification as a REIT and our exemption from the 1940 Act. Our Manager has not and does not expect to purchase securities on our behalf with a view to selling them shortly after purchase. However, in order to maximize returns and manage portfolio risk while remaining opportunistic, we may dispose of securities earlier than anticipated or hold securities longer than anticipated depending upon prevailing market conditions, credit performance, availability of leverage or other factors regarding a particular security or our capital position.

## Our Target Assets

We have invested the proceeds of our IPO, concurrent private placements and follow-on public offerings and expect to continue to focus on investing in the following types of securities:

*Agency RMBS.*—Agency RMBS, which are RMBS for which the principal and interest payments are guaranteed by a U.S. Government agency, such as Government National Mortgage Association (“GNMA” or “Ginnie Mae”), or a U.S. Government-sponsored entity, such as Federal National Mortgage Association (“FNMA” or “Fannie Mae”) or Federal Home Loan Mortgage Corporation (“FHLMC” or “Freddie Mac”). The Agency RMBS we acquire can be secured by fixed-rate mortgages, adjustable-rate mortgages or hybrid adjustable-rate mortgages. Fixed-rate mortgages have interest rates that are fixed for the term of the loan and do not adjust. The interest rates on adjustable-rate mortgages generally adjust annually (although some may adjust more frequently) to an increment over a specified interest rate index. Hybrid adjustable-rate mortgages have interest rates that are fixed for a specified period of time (typically three, five, seven or ten years) and, thereafter, adjust to an increment over a specified interest rate index. Adjustable-rate mortgages and hybrid adjustable-rate mortgages generally have periodic and lifetime constraints on the amount by which the loan interest rate can change on any predetermined interest rate reset date. As of December 31, 2014, all of our Agency RMBS, excluding interest-only strips, are secured by fixed-rate mortgages.

*Mortgage pass-through certificates.*—Mortgage pass-through certificates are securities representing interests in “pools” of mortgage loans secured by residential real property where payments of both interest and scheduled principal, plus pre-paid principal, on the underlying loan pools are made monthly to holders of the securities, in effect “passing through” monthly payments made by the individual borrowers on the mortgage loans that underlie the securities, net of fees paid to the issuer/guarantor of the securities and servicers of the underlying mortgages.

*Interest-Only Strips or IOs.*—This type of security only entitles the holder to interest payments. The yield to maturity of Interest-Only Strips is extremely sensitive to the rate of principal payments (particularly prepayments) on the underlying pool of mortgages. We invest in these types of securities primarily to take advantage of particularly attractive prepayment-related or structural opportunities in the MBS markets, as well as to help manage the duration of our overall portfolio

*Inverse Interest-Only Strips or IIOs.*—This type of security has a coupon with an inverse relationship to its index and is subject to caps and floors. Inverse Interest-Only MBS entitles the holder to interest only payments based on a notional principal balance, which is typically equal to a fixed rate of interest on the notional principal balance less a floating rate of interest on the notional principal balance that adjusts according to an index subject to set minimum and maximum rates. The current yield of Inverse Interest-Only MBS will generally decrease when its related index rate increases and increase when its related index rate decreases.

*Principal-Only Strips.*—This type of security generally only entitles the holder to receive cash flows that are derived from principal repayments of an underlying loan pool, but in the case of Non-Agency Principal-Only Strips will also include cash flows from default recoveries and excess interest. The yield to maturity of Principal-Only Strips is extremely sensitive to the rate of principal payments (particularly prepayments) on the underlying pool of mortgages. We invest in these types of securities primarily to take advantage of structural opportunities in the MBS markets.

*TBAs.*—We may utilize TBAs, in order to invest in Agency RMBS. Pursuant to these TBAs, we agree to purchase (or deliver), for future settlement, Agency RMBS with certain principal and interest terms and certain types of underlying collateral, but the particular Agency RMBS to be delivered is not identified until shortly before the TBA settlement date. Our ability to invest in Agency RMBS through TBAs may be limited by the 75% income and asset tests applicable to REITs.

*Collateralized Mortgage Obligations or CMOs.*—These are securities that are structured from residential and/or commercial pass-through certificates, which receive monthly payments of principal and interest. CMOs divide the cash flows which come from the underlying mortgage pass-through certificates into different classes of securities that may have different maturities and different weighted average lives than the underlying pass-through certificates.

*Non-Agency RMBS.*—RMBS that are not guaranteed by a U.S. Government agency or U.S. Government-sponsored entity, with an emphasis on securities that when originally issued were rated in the highest rating category by one or more of the nationally recognized statistical rating organizations.

The mortgage loan collateral for Non-Agency RMBS consists of residential mortgage loans that do not generally conform to underwriting guidelines issued by a U.S. Government agency or U.S. Government-sponsored entity due to certain factors, including mortgage balances in excess of agency underwriting guidelines, borrower characteristics, loan characteristics and/or level of documentation, and therefore are not issued or guaranteed by a U.S. Government agency or U.S. Government-sponsored entity. The mortgage loan collateral may be classified as subprime, Alternative-A or prime depending on the borrower's credit rating and the underlying level of documentation. Non-Agency RMBS may be secured by fixed-rate mortgages, adjustable-rate mortgages or hybrid adjustable-rate mortgages.

*Agency CMBS.*—Fixed and floating rate CMBS, for which the principal and interest payments are guaranteed by a U.S. Government agency or U.S. Government-sponsored entity, but for which the underlying mortgage loans are secured by real property other than single family residences. These may include, but are not limited to Fannie Mae DUS (Delegated Underwriting and Servicing) MBS, Freddie Mac Multifamily Mortgage Participation Certificates, Ginnie Mae project loan pools, and/or CMOs structured from such collateral.

*Non-Agency CMBS.*—Fixed and floating rate CMBS for which the principal and interest payments are not guaranteed by a U.S. Government agency or U.S. Government-sponsored entity. To date, our primary emphasis has been on legacy securities that when originally issued were rated in the highest rating category by one or more of the nationally recognized statistical rating organizations but we have also invested in subordinated debt for which the property (properties) securing the underlying mortgage collateral is located within the U. S. or the European Union. We do not have an established a minimum current rating requirement for such investments.

*Non U.S. CMBS.*—CMBS which is not guaranteed by a U.S. Government agency or U.S. Government-sponsored entity and which is secured by commercial real estate located outside of the U.S. Although our Manager believes that these investments can provide attractive risk-reward opportunities and offer additional asset diversification, investing in international real estate has a number of additional risks, including but not limited to currency risk, political risk and the legal risk of investing in jurisdiction(s) with varying laws and regulations and potential tax implications. See Item 7A: Quantitative and Qualitative Disclosures about Market Risk—Foreign Investment Risk and Currency Risk herein.

*Agency and Non-Agency CMBS IO and IIO Securities.*—Interest-Only and Inverse Interest-Only securities for which the underlying collateral is commercial mortgages the principal and interest on which may or may not be guaranteed by a U.S. Government agency or U.S. Government-sponsored entity. Unlike single family residential mortgages in which the borrower, generally, can prepay at any time, commercial mortgages frequently limit the ability of the borrower to prepay, thereby providing a certain level of prepayment protection. Common restrictions include yield maintenance and prepayment penalties, the proceeds of which are generally at least partially allocable to these securities, as well as defeasance.

*Risk Sharing Securities Issued by Fannie Mae and Freddie Mac.*—From time to time we have and may in the future continue to invest in risk sharing securities issued by Fannie Mae and Freddie Mac. Principal and interest payments on these securities are based on the performance of a specified pool of Agency residential mortgages. The payments due on these securities, however, are not secured by the referenced mortgages, but are full faith and credit obligations of Fannie Mae or Freddie Mac respectively. Investments in these securities generally are not qualifying assets for purposes of the 75% asset test applicable to REITs and generally do not generate qualifying income for purposes of the 75% income test applicable to REITs. As a result, we may be limited in our ability to invest in such assets.

*ABS.*—Debt and/or equity tranches of securitizations backed by various asset classes including, but not limited to, aircrafts, automobiles, credit cards, equipment, franchises, recreational vehicles and student loans. Investments in ABS generally are not qualifying assets for purposes of the 75% asset test applicable to REITs and generally do not generate qualifying income for purposes of the 75% income test applicable to REITs. As a result, we may be limited in our ability to invest in such assets.

*Residential whole-loans.*—We have made our first investment in “residential whole-loan” instruments and may in the future expand our investment in these mortgages, secured by single family residential properties. In this regard, our Manager is actively working on a number of potential whole-loan programs involving residential mortgages. As currently contemplated, these programs involve investing in structured Non-Agency RMBS programs crafted specifically for us, although it is possible that we could hold mortgage loans directly at some point. In addition to holding these instruments for investment, our Manager is also working to provide us with the ability to invest in or acquire whole-loans directly or gain exposure to whole-loans through investments in structured programs with the intention of securitizing the whole-loans in the future, selling the investment grade portion of the securitized structure and retaining the residual portion. During the fourth quarter 2014, we completed our first purchase of these instruments. The residential whole-loans are held by a trust whose entire beneficial interest we hold. Although our expectation is that we will continue to make at least a limited amount of these investments in the near future, increasing these instruments as part of our target assets involves complex investment, structural, regulatory and accounting issues and there can be no assurance that we will in fact expand our investments in residential whole-loans or, if we do, in what form and to what extent we will do so.

*Commercial whole-loans.*—Our Manager is also actively exploring opportunities to invest in small balance, \$2.5 million to \$25.0 million, commercial whole-loans, including commercial mortgages and Small Business Administration or SBA loans secured primarily by real estate. Subsequent to the close of the fiscal year, we made our first investment in these instruments. While our Manager has experience in CMBS and we currently invest in Agency and Non-Agency CMBS as well as Non U.S. CMBS, investing in whole-loans backed or secured by commercial real estate assets involves complex investment, structural, regulatory and accounting issues. Some of these issues are unique to commercial whole-loans as opposed to residential mortgages. Accordingly, there is no assurance of the prevalence such investments will have in our overall portfolio.

*Other investments.*—In addition to MBS, our principal investment, and ABS from time to time, we may also make other investments in securities, which our Manager believes will assist us in meeting our investment objective and are consistent with our overall investment policies. These investments will normally be limited by the REIT requirements that 75% our assets be real estate assets and that 75% of our income be generated from real estate, thereby limiting our ability to invest in such assets.

At the time of our IPO, our primary investment strategy focused on Agency RMBS. As discussed above, we continue to increase the portion of our portfolio allocated to Non-Agency RMBS, Agency and Non-Agency CMBS, Non U.S. CMBS and ABS and in the fourth quarter of 2014 made our first in investment in residential whole-loan mortgages. In the future are likely to expand our investments in these securities. The allocation to Non-Agency RMBS, Agency and Non-Agency CMBS, residential and commercial whole-loans and ABS may vary from time to time based on market conditions.

As of December 31, 2014, the fair value of our investment portfolio was comprised of 72.0% of Agency RMBS, 15.3% of Non-Agency RMBS, 1.0% of Agency CMBS, 9.0% of Non-Agency CMBS, 2.5% of other securities and 0.2% of residential whole-loans, excluding linked transactions. As of December 31, 2014, the fair value of our investment portfolio was comprised of 71.2% of Agency RMBS, 15.3% of Non-Agency RMBS, 1.0% of Agency CMBS, 9.7% of Non-Agency CMBS, 2.6% of other securities and 0.2% of residential whole-loans, including linked transactions.

### **Our Financing Strategy.**

The leverage that we employ is specific to each asset class and is determined based on several factors, including potential asset price volatility, margin requirements, the current cycle for interest rates, the shape of the yield curve, the outlook for interest rates and our ability to use and the effectiveness of interest rate hedges. We analyze both historical volatility and market-driven implied volatility for each asset class in order to determine potential asset price volatility. Our leverage targets attempt to risk-adjust asset classes based on each asset class's potential price volatility. The goal of our leverage strategy is to ensure that, at all times, our investment portfolio's overall leverage ratio is appropriate for the level of risk inherent in the investment portfolio.

We may fund the acquisition of our assets through the use of leverage from a number of financing sources, subject to maintaining our qualification as a REIT. We finance purchases of MBS and other securities primarily through the use of repurchase agreements.

Our operating results depend in large part on differences between the income earned on our assets and our cost of borrowing and hedging activities. We use leverage to increase potential returns to our stockholders. We currently accomplish this by borrowing against existing assets through repurchase agreements. Our investment policies place no limits on the maximum amount of leverage that we may use, and we are not required to maintain any particular debt-to-equity leverage ratio under our charter. We may also change our financing strategy and leverage without the consent of our stockholders.

The costs associated with our borrowings are generally based on prevailing market interest rates. During a period of rising interest rates, our borrowing costs generally will increase while the yields earned on our existing portfolio of leveraged fixed-rate MBS and other fixed rate securities will remain static. This could result in a decline in our net interest spread and net interest margin. The severity of any such decline would depend on our asset/liability composition at the time, as well as the magnitude and duration of the interest rate increase. Further, an increase in short-term interest rates could also have a negative impact on the market value of our assets. If either of these events happens, we could experience a decrease in net income or incur a net loss during these periods, which could adversely affect our liquidity and results of operations.

We expect to maintain a debt to equity ratio of five to ten times the amount of our stockholders' equity, although there is no minimum or maximum leverage that our investment policies explicitly require. To the extent the Agency MBS percentage of our portfolio decreases, our overall leverage is likely to decrease. Depending on the different cost of borrowing funds at different maturities, we will vary the maturities of our borrowed funds to attempt to produce lower borrowing costs and reduce interest rate risk. We enter into collateralized borrowings only with institutions that are rated investment grade by at least one nationally-recognized statistical rating organization. We rely on financing to acquire, on a leveraged basis, assets in which we invest. If market conditions deteriorate, our lenders may exit the repurchase market, and tighten lending standards, or increase the amount of equity capital required to obtain financing making it more difficult and costly for us to obtain financing.

For the year ended December 31, 2014, we financed our MBS and other securities with repurchase agreements, on a debt-to-equity basis, ranging from 6.1 to 7.4 times leverage calculated at each month-end. In the future, we may, however, be limited or restricted in the amount of leverage we may employ by the terms and provisions of any financing or other agreements, and may be subject to margin calls as a result of our financing activity. We had an aggregate debt-to-equity ratio, related to our repurchase agreements of approximately 6.3 to 1, including repurchase agreements on linked transactions, and 6.2 to 1, excluding repurchase agreements on linked transactions at December 31, 2014. Our debt-to-equity ratio is computed by dividing repurchase borrowings by total stockholders' equity.

We finance MBS and other securities with repurchase agreement financing with maturities generally ranging from one to three months, but in some cases longer. At December 31, 2014, we had entered into master repurchase agreements with 24 counterparties. One of our existing repurchase agreement counterparties and one of its affiliates has communicated their intention to exit the repurchase agreement market in 2015. We believe that we have sufficient capacity with our other repurchase agreement counterparties to refinance these positions. We had approximately \$3.9 billion outstanding under our repurchase agreements, including repurchase agreements accounted for as part of linked transactions of \$28.9 million and repurchase agreements related to residential whole-loans owned through trust certificates of \$4.9 million at December 31, 2014. The trust certificates are eliminated upon consolidation.

### **Our Hedging Strategy**

Subject to maintaining our qualification as a REIT for U.S. federal income purposes, we pursue various economic hedging strategies to seek to reduce our exposure to adverse changes in interest rates and, to a more limited extent, foreign currency. The U.S. federal income tax rules applicable to REITs may require us to implement certain of these techniques through a domestic TRS that is fully subject to federal corporate income taxation. As of December 31, 2014, we have one wholly owned subsidiary which we have jointly elected to treat as a TRS. Our hedging activity varies in scope based on the level and volatility of interest rates, the type of assets held, including currency denomination and other changing market conditions. As of December 31, 2014, the majority of swaps we entered into are designed to mitigate the effects of increases in interest rates under a portion of our repurchase agreements. These swaps generally provide for fixed interest rates indexed off of the London interbank offered rate or LIBOR and effectively fix the floating interest rates. Notwithstanding the foregoing, in order to manage our hedge position with regard to our liabilities, we on occasion will enter into interest rate swaps which involve the receipt of fixed-rate amounts from a counterparty in exchange for us making variable-rate payments over the life of the interest rate swap without exchange of the underlying notional amount. As of December 31, 2014, we effectively fixed the floating interest rates on approximately \$1.4 billion of borrowings under our repurchase agreements, net of variable-rate payment swaps. We also entered into forward starting swaps of \$2.2 billion. We utilize forward starting swaps and swaptions for several reasons including replacing expiring swaps, in anticipation of increasing our overall financing and reducing our exposure to future interest rate increases. Interest rate swaptions provide us the option to enter into an interest rate swap agreement for a predetermined notional amount, stated term and pay and receive interest rates in the future. As of December 31, 2014, we owned swaptions on approximately an incremental \$105.0 million of borrowings. As of December 31, 2014, we also entered into foreign currency swaps, agreeing to pay a fixed amount of euros in exchange for a fixed amount of U.S. dollars as well as currency forwards. We entered into the currency swaps and forwards in order to hedge our exposure to foreign currency with respect to Non-U.S. CMBS investments and the corresponding repurchase financings utilized to make such investments. In order to enable us to maintain compliance with the REIT requirements, we have generally elected to treat our derivative instruments as hedges for U.S. federal tax purposes. To date, however, we have not elected to apply hedge accounting for financial statement reporting purposes for our derivative instruments. As a result, we record the change in fair value of our derivatives and the associated interest and currency exchange in earnings. Additionally, we may enter into hedging transactions in the form of puts and calls or other financial instruments that we deem appropriate.

Our interest rate hedging techniques are partly based on assumed levels of prepayments of our target assets. If prepayments are slower or faster than assumed, the life of the investment will be longer or shorter, which would reduce the effectiveness of any of the interest rate hedging strategies we may use and may cause losses on such transactions. Hedging strategies, both interest rate and foreign currency, involve the use of derivative securities which are highly complex and may produce volatile returns.

We may invest in equity index derivatives such as futures, options on futures and options on indices. These instruments are used normally to hedge interest rate movements as well as credit risks and other risks associated with our portfolio which may be impacted by volatility in the equity markets. Tax and other regulatory rules may limit our overall ability to use these instruments even through a TRS. Investing in these instruments introduces equity market risks into the management of the portfolio although as noted above our Manager uses them for the purpose of hedging our overall interest rate risk. These hedging strategies involving equity index products may not be successful, and may expose us to additional losses, if expected correlations between such risks and the equity markets do not occur. The goal of our hedging strategy is to ensure that, at all times, we are appropriately hedged in accordance with the REIT requirements for the level of interest rate and currency risk inherent in our investment portfolio.

## **Regulation**

### **Our Manager**

We are externally managed and advised by Western Asset Management Company. Established in 1971 and acquired by Legg Mason in 1986, our Manager is a registered investment advisor headquartered in Pasadena, California, that specializes in fixed-income asset management. From offices in Pasadena, Dubai, Hong Kong, London, Melbourne, New York, São Paulo, Singapore and Tokyo, our Manager's 824 employees provide investment services for a wide variety of global clients, including mutual funds, corporate, public, insurance, health care, union organizations and charitable foundations. As of December 31, 2014, our Manager and its investment advisory affiliates over which our Manager has operational responsibility, or its supervised affiliates, had approximately \$466.0 billion in assets under management. All of our officers, apart from our chief financial officer, Steven M. Sherwyn, were employees of our Manager previous to January 1, 2014. Effective on that date, Mr. Sherwyn also became an employee of our Manager as well. In addition two, of our directors, James W. Hirschmann III and Gavin L. James, are also employees of our Manager. Our Manager is responsible for, among other duties: (i) performing all of our day-to-day functions; (ii) determining investment criteria in conjunction with our Board of Directors; (iii) sourcing, analyzing and executing investments, asset sales and financings; (iv) performing asset management duties; and (v) performing financial and accounting management.

### **Management Agreement**

On May 9, 2012, we entered into a management agreement, or the Management Agreement, with our Manager. Pursuant to the Management Agreement, our Manager is responsible for the implementation of our business strategy and performs certain services for us, subject to oversight by our Board of Directors. The initial term of the Management Agreement ends on May 15, 2015, with automatic one-year renewal terms thereafter. Following the initial three-year term, the Management Agreement may be terminated annually upon the affirmative vote of at least two thirds ( $\frac{2}{3}$ ) of our independent directors based upon: (i) our Manager's unsatisfactory performance that is materially detrimental to us; or (ii) our determination that any fees payable to our Manager are not fair, subject to our Manager's right to prevent termination based on unfair fees by accepting a reduction of management fees agreed to by at least two thirds ( $\frac{2}{3}$ ) of our independent directors, subject to 180 days prior notice of such termination. Upon such a termination, we are required to pay our Manager a termination fee equal to three times the average annual management fee earned by our Manager during the prior 24-month period prior to such termination. We may also terminate the Management Agreement at any time, including during the initial term, with 30 days prior notice from our Board of Directors, without payment of a termination fee, for cause, as defined in the Management Agreement. Our Manager may terminate the Management Agreement if we become required to register as an investment company under the 1940 Act, with such termination deemed to occur immediately before such event, in which case we are not required to pay a termination fee. Our Manager may also decline to renew the Management Agreement by providing us with 180 days written notice, in which case we are not required to pay a termination fee. Pursuant to the terms of the Management Agreement it has been extended for one year to May 15, 2016.

Our Manager is entitled to a management fee equal to 1.5% per annum, calculated and payable quarterly in arrears, of our stockholders' equity. For purposes of calculating the management fee, our "stockholders' equity" means the sum of the net proceeds from any issuances of our equity securities since inception (allocated on a pro rata daily basis for such issuances during the fiscal quarter of any such issuance), plus our retained earnings, calculated in accordance with U.S. GAAP, at the end of the most recently completed fiscal quarter (without taking into account any non-cash equity compensation expense incurred in current or prior periods), less any amount that we pay for repurchases of our shares of common stock, excluding any unrealized gains, losses or other non-cash items that have impacted stockholders' equity as reported in our financial statements prepared in accordance with U.S. GAAP, regardless of whether such items are included in other comprehensive income or loss, or in net income, including OTTI charges reported in other loss on MBS, unrealized gain (loss) on MBS and other securities and the non-cash portion of gain (loss) on derivative instruments, as well as one-time events pursuant to changes in U.S. GAAP and certain other non-cash charges, based on discussions between our Manager and our independent directors and subject to approval by at least two thirds ( $\frac{2}{3}$ ) of our independent directors. However, if our stockholders' equity for any given quarter is negative based on the calculation described above, our Manager will not be entitled to receive any management fee for that quarter. Our Manager is entitled to reimbursement of its operating expenses related to us, including legal, accounting, due diligence and other services.

We elected to be taxed as a REIT under Section 856 through 860 of the Internal Revenue Code of 1986, as amended (the "Code"), commencing with our taxable year ended December 31, 2012. We will generally not be subject to corporate U.S. federal or state income tax to the extent that we make qualifying distributions to stockholders, and provided that we satisfy, on a continuing basis, through actual investment and operating results, the REIT requirements including certain asset, income, distribution and stock ownership tests. If we fail to qualify as a REIT, and do not qualify for certain statutory relief provisions, we will be subject to U.S. federal, state and local income taxes and may be precluded from qualifying as a REIT for the subsequent four taxable years following the year in which we lost our REIT qualification. The failure to qualify as a REIT could have a material adverse impact on the Company's results of operations and amounts available for distribution to stockholders.

We believe that we are not, and intend to conduct our operations so as not to become regulated as an investment company under the 1940 Act. We have relied, and intend to continue to rely on current interpretations of the staff of the SEC in an effort to continue to qualify for an exemption from registration under the 1940 Act. For more information on the exemptions that we utilize refer to Item 1A, "Risk Factors" of this annual report on Form 10-K.

### **Competition**

Our net income depends, in part, on our ability to acquire assets at favorable spreads over our borrowing costs. In acquiring our target assets, we compete with other REITs, specialty finance companies, savings and loan associations, banks, mortgage bankers, insurance companies, mutual funds, institutional investors, investment banking firms, financial institutions, governmental bodies and other entities. In addition, other REITs with similar asset acquisition objectives, including a number that have been recently formed and others that may be organized in the future, compete with us in acquiring assets and obtaining financing. These competitors may be significantly larger than us, may have access to greater capital and other resources or may have other advantages. In addition, some competitors may have higher risk tolerances or different risk assessments, which could allow them to consider a wider variety of investments, and establish more relationships, than us. Current market conditions may attract more competitors, which may increase the competition for sources of financing. An increase in the competition for sources of funding could adversely affect the availability and cost of financing, and thereby adversely affect the market price of our common stock.

## Employees

Previous to January 1, 2014, other than our chief financial officer, we have had no employees and have been managed by our Manager pursuant to the Management Agreement between our Manager and us dated as of May 9, 2012. On January 1, 2014, our chief financial officer also became an employee of our Manager.

## Corporate Governance and Internet Address

We emphasize the importance of professional business conduct and ethics through our corporate governance initiatives. In 2014 the Board took additional steps to enhance governance by appointing a lead independent director and adding a fourth independent director so that our Board of Directors consists of two thirds ( $\frac{2}{3}$ ) independent directors. The audit, nominating and corporate governance, and compensation committees of our Board of Directors are composed entirely of independent directors. We have adopted corporate governance guidelines and a code of business conduct and ethics, which delineate our standards for our officers and directors.

Our internet address is [www.westernassetmcc.com](http://www.westernassetmcc.com). The information on our website is not incorporated by reference in this Annual Report on Form 10-K. We make available, free of charge through a link on our site, our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to such reports, if any, as filed or furnished with the SEC, as soon as reasonably practicable after such filing or furnishing. Our site also contains our code of business conduct and ethics, corporate governance guidelines and the charters of our audit committee, nominating and corporate governance committee and compensation committee of our Board of Directors. Within the time period required by the rules of the SEC and the New York Stock Exchange, or NYSE, we will post on our website any amendment to our code of business conduct and ethics as defined in the code. Our documents filed with, or furnished to, the SEC are also available for review and copying by the public at the SEC's Public Reference Room at 100 F Street, NE., Washington, DC 20549 and at the SEC's website at [www.sec.gov](http://www.sec.gov). Information regarding the operation of the Public Reference Room may be obtained by calling the SEC at 1-800-SEC-0330.

## Item 1A. Risk Factors

*Our business and operations are subject to a number of risks and uncertainties, the occurrence of which could adversely affect our business, financial condition, results of operations and ability to make distributions to stockholders and could cause the value of our capital stock to decline.*

### Risks related to our business

*We have a limited operating history and may not be able to successfully operate our business or generate sufficient revenue to make or sustain distributions to our stockholders.*

We were organized as a Delaware corporation on June 3, 2009, but did not commence operations until the completion of our IPO on May 15, 2012. We cannot assure you that we will be able to continue to operate our business successfully or implement our operating policies and strategies as described herein. The results of our operations depend on several factors, including the availability of opportunities for the acquisition of assets, the level and volatility of interest rates, the availability of adequate short and long-term financing, conditions in the financial markets and economic conditions.

*We may change any of our strategies, policies or procedures without stockholder consent.*

We may change any of our strategies, policies or procedures with respect to investments, acquisitions, growth, operations, indebtedness, capitalization, distributions, financing strategy and leverage at any time without the consent of our stockholders, which could result in an investment portfolio with a different risk profile. A change in our investment strategy may increase our exposure to interest rate risk, default risk and real estate market fluctuations. Furthermore, a change in our asset allocation could result in our making investments in asset categories different from those described herein. These changes could adversely affect our financial condition, results of operations, the market price of our common stock and our ability to make distributions to our stockholders.

*We may be unable to operate within the parameters that allow us to be excluded from regulation as a commodity pool operator, which would subject us to additional regulation and compliance requirements, and could materially adversely affect our business and financial condition.*

As a result of regulatory changes prompted by the Dodd-Frank Act, any investment fund that trades in swaps may be considered a "commodity pool," which would cause its operators to be regulated as a "commodity pool operator" (or, CPO). In December 2012, the Commodity Futures Trading Commission issued a no-action letter giving relief to operators of mortgage REITs from the requirements applicable to CPOs. In order to qualify, we must, among other non-operation requirements: (1) limit our initial margin and premiums for commodity interests (swaps and exchange-traded futures) to no more than 5% of the fair market value of our total assets; and (2) limit our net income from commodity interests that are not "qualifying hedging transactions" to less than 5% of our gross income. These parameters could limit the use of swaps by us below the level that our Manager would otherwise consider optimal or may lead to the registration of our Manager or directors as commodity pool operators, which will subject us to additional regulatory oversight, compliance and costs.

*Recent changes to derivatives regulation may increase the costs of hedging for the Company.*

Recently, regulations have been promulgated by U.S. and foreign regulators attempting to strengthen oversight of derivative contracts. The Dodd-Frank Act established a comprehensive new regulatory framework for derivative contracts commonly referred to as "swaps" which requires that many swaps be executed on a regulated exchange or trading platform ("mandatory exchange trading") and cleared through a central counterparty ("mandatory clearing"). In particular, certain of the swaps that the Manager may want to use to hedge the Company's exposure to fluctuations in interest rates may now be subject to mandatory clearing and mandatory exchange trading. For swaps that are subject to mandatory clearing, the Company will be forced to pledge some of its assets to a clearing broker as initial margin, and for the life of such swaps, the assets pledged as initial margin generally will not be available to the Company for investment. For swaps that are subject to mandatory clearing and mandatory exchange trading, the Company likely will incur additional fees and costs for transactions in such swaps. Together, these requirements may make our Manager's hedging strategies more costly or may induce our Manager to change its hedging strategies.

*In the past, our internal controls over financial reporting were found to have material weaknesses.*

In conjunction with our 2012 audit, we determined that we had a material weakness in our internal control over financial reporting as of December 31, 2012. This material weakness was attributable to management's supervision, review and acceptance of procedures with respect to a third-party vendor's computation of interest income accretion and amortization of the cost basis of certain Agency RMBS. A detailed description of this material weakness was provided in Part II, Item 9A of our Annual Report on Form 10-K for the fiscal year ended December 31, 2012. Due solely to this material weakness, we concluded that our disclosure controls and procedures as of December 31, 2012 were not effective.

Beginning in the first quarter of 2013, we implemented a series of internal controls over financial reporting in order to remediate this issue, as described further in our quarterly reports on Form 10-Q for the quarters ended March 31, 2013, June 30, 2013 and September 30, 2013. During the third and fourth quarter of 2013, we tested each of the aforementioned procedures and based on the results of that testing we believe such procedures have been successfully implemented and have remediated the material weakness referenced above.

We may continue to expend significant financial resources and time in order to improve our internal controls over financial reporting.

We are responsible for establishing and maintaining adequate internal control over financial reporting designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. We cannot ensure you that there will not be any other material weaknesses in our internal control over financial reporting in the future.

***Cybersecurity risk and cyber incidents may adversely affect our business by causing a disruption to our operations, a compromise or corruption of our confidential information and/or damage to our business relationships, all of which could negatively impact our financial results.***

A cyber incident is considered to be any adverse event that threatens the confidentiality, integrity or availability of our information resources. These incidents may be an intentional attack or an unintentional event and could involve gaining unauthorized access to our information systems for purposes of misappropriating assets, stealing confidential information, corrupting data or causing operational disruption. The result of these incidents may include disrupted operations, misstated or unreliable financial data, liability for stolen assets or information, increased cybersecurity protection and insurance cost, litigation and damage to our investor relationships. As our reliance on technology has increased, so have the risks posed to both our information systems, both internal and those provided by our Manager and third-party service providers. Our Manager has implemented processes, procedures and internal controls to help mitigate cybersecurity risks and cyber intrusions, but these measures, as well as our increased awareness of the nature and extent of a risk of a cyber incident, do not guarantee that our financial results, operations or confidential information will not be negatively impacted by such an incident.

#### **Risks related to our investing strategy**

***Mortgage loan modification, refinancing programs, reduction in mortgage insurance premiums and minimum down payments and future legislative action may adversely affect the value of, and our returns on, Agency RMBS, Non-Agency RMBS and our additional Target Assets..***

The U.S. Government, through the U.S. Federal Reserve, the Federal Housing Administration, or the FHA, and the Federal Deposit Insurance Corporation, has implemented a number of federal programs designed to assist homeowners, including the Home Affordable Modification Program, or HAMP, which provides homeowners with assistance in avoiding residential mortgage loan foreclosures, the Hope for Homeowners Program, or H4H Program, which allowed certain distressed borrowers to refinance their mortgages into FHA-insured loans in order to avoid residential mortgage loan foreclosures, and the Home Affordable Refinance Program, or HARP, which allows borrowers who are current on their mortgage payments to refinance and reduce their monthly mortgage payments at loan-to-value ratios up to 125% (and, in some cases, above 125%) without new mortgage insurance. A number of these homeowners' assistance programs have been enhanced or expanded and the HAMP and HARP programs have been extended through December 31, 2016. In addition, current administration officials and certain members of the U.S. Congress have indicated support for additional legislative relief for homeowners, including an amendment of the bankruptcy laws to permit the modification of mortgage loans in bankruptcy proceedings. Loan modifications are more likely to be used when borrowers are less able to refinance or sell their homes due to market conditions and when the potential recovery from a foreclosure is reduced due to lower property values. A significant number of loan modifications could result in a significant reduction in cash flows to the holders of the mortgage securities on an ongoing basis. Amendments to the bankruptcy laws that result in the modification of outstanding mortgage loans may adversely affect the value of and the returns on, the assets that we intend to acquire and the assets we currently hold.

Especially with Non-Agency RMBS, a significant number of loan modifications with respect to a given security, including, but not limited to, those related to principal forgiveness and coupon reduction, resulting in increased prepayment rates, could negatively impact the realized yields and cash flows on such security. These loan modification programs, future legislative or regulatory actions, including possible amendments to the bankruptcy laws, which result in the modification of outstanding residential mortgage loans, as well as changes in the requirements necessary to qualify for refinancing mortgage loans with FNMA, FHLMC or GNMA may adversely affect the value of, and the returns on, Agency RMBS and Non-Agency RMBS.

In October 2014, the FHA announced that it would allow FNMA and FHLMC to purchase loans with three percent (3%) down payments, thereby reducing the down payment requirement for borrowers to access mortgage loans which are eligible for purchase and/or guarantee by these U.S. Government sponsored entities or GSEs. Further, in January 2015, the Obama administration announced a 50 basis points (0.50%) reduction in the annual mortgage insurance premium imposed by the FHA on mortgage loans guaranteed by GNMA. The reduction in the minimum down payment along with lowering all-in mortgage interest rates on GSE sponsored residential mortgage loans will likely increase the attractiveness of refinancing as well as purchases of new and existing homes, thereby increasing the prepayment rates on the mortgage loans underlying our existing RMBS. This may adversely affect the value of, and the returns on, these assets, especially those which we acquired at a premium.

*The federal conservatorship of FNMA and FHLMC and related efforts, along with any changes in laws and regulations affecting the relationship between these agencies and the U.S. Government, may adversely affect our business.*

The payments of principal and interest we receive on our Agency RMBS, which depend directly upon payments on the mortgages underlying such securities, are guaranteed by FNMA, FHLMC and GNMA. FNMA and FHLMC are U.S. Government-sponsored entities, or GSEs, but their guarantees are not backed by the full faith and credit of the United States. GNMA is part of a U.S. Government agency and its guarantees are backed by the full faith and credit of the United States.

In response to general market instability and, more specifically, the financial conditions of FNMA and FHLMC, in July 2008, the Housing and Economic Recovery Act of 2008, or HERA, established a new regulator for FNMA and FHLMC, the U.S. Federal Housing Finance Agency, or the FHFA. In September 2008, the U.S. Treasury, the FHFA and the U.S. Federal Reserve announced a comprehensive action plan to help stabilize the financial markets, support the availability of mortgage financing and protect taxpayers. Under this plan, among other things, the FHFA was appointed as conservator of both FNMA and FHLMC, allowing the FHFA to control the actions of the two GSEs, without forcing them to liquidate, which would be the case under receivership. Importantly, the primary focus of the plan was to increase the availability of mortgage financing by allowing these GSEs to continue to grow their guarantee business without limit, while limiting the size of their retained mortgage and Agency security portfolios and requiring that these portfolios be reduced over time.

Although the U.S. Government has committed to support the positive net worth of FNMA and FHLMC, there can be no assurance that these actions will be adequate for their needs. These uncertainties lead to questions about the availability of, and trading market for, Agency RMBS. Despite the steps taken by the U.S. Government, FNMA and FHLMC could default on their guarantee obligations which would materially and adversely affect the value of our Agency RMBS. Accordingly, if these government actions are inadequate and the GSEs continue to suffer losses or cease to exist, our business, operations and financial condition could be materially and adversely affected.

In addition, the problems faced by FNMA and FHLMC resulting in their being placed into federal conservatorship and receiving significant U.S. Government support have sparked serious debate among federal policy makers regarding the continued role of the U.S. Government in providing liquidity for mortgage loans. The future roles of FNMA and FHLMC could be significantly reduced and the nature of their guarantee obligations could be considerably limited relative to historical measurements. Any such changes to the nature of their guarantee obligations could redefine what constitutes an Agency security and could have broad adverse implications for the market and our business, operations and financial condition. If FNMA or FHLMC were eliminated, or their structures were to change radically (*i.e.*, limitation or removal of the guarantee obligation), or their market share reduced because of required price increases or lower limits on the loans they can guarantee, we could be unable to acquire additional Agency RMBS and our existing Agency RMBS could be materially and adversely impacted.

We could be negatively affected in a number of ways depending on the manner in which related events unfold for FNMA and FHLMC. We currently rely significantly on our Agency RMBS as collateral for our financings under our repurchase agreements. Any decline in its value, or perceived market uncertainty about its value, would make it more difficult for us to obtain financing on our Agency RMBS on acceptable terms or at all, or to maintain our compliance with the terms of any financing transactions. Further, the current support provided by the U.S. Treasury to FNMA and FHLMC, and any additional support it may provide in the future, could have the effect of lowering the interest rates we expect to receive from Agency RMBS, thereby tightening the spread between the interest we earn on our Agency RMBS and the cost of financing those assets. A reduction in the supply of Agency RMBS could also negatively affect the pricing of Agency RMBS by reducing the spread between the interest we earn on our investment portfolio of Agency RMBS and our cost of financing that portfolio.

In March 2013, the U.S. Federal Housing Finance Agency announced that it would establish a new institutional body, which later became known as the Federal Mortgage Insurance Currency or, FMIC, to replace FNMA and FHLMC once they wind down operations. In June 2013, in a draft bill entitled the "Secondary Mortgage Market Reform and Taxpayer Protection Act of 2013" it was proposed that the FMIC would be modeled after the Federal Deposit Insurance Corporation or FDIC and provide catastrophic reinsurance in the secondary market for mortgage-backed securities. It would also take over multi-family guarantees as the existing portfolios of FNMA and FHLMC are wound down by at least 15% annually until they are completely liquidated. Future legislation affecting the Agencies may create market uncertainty and have the effect of reducing the actual or perceived credit quality of the Agencies and the securities issued or guaranteed by them. As a result, such laws could increase the risk of loss on our investments in Agency RMBS. It also is possible that such laws could adversely impact the market for such securities and the spreads at which they trade. All of the foregoing could have a material adverse effect on our business, financial condition, results of operations, the market price of our capital stock and our ability to pay dividends to our stockholders.

In December 2013, Representative Melvin L. Watt was confirmed as the director of the FHFA, replacing then acting director Edward J. DeMarco. Throughout his tenure, Mr. DeMarco repeatedly struck down various attempts regarding debt forgiveness for homeowners. A change in leadership at the FHFA may increase the likelihood of the implementation of such a program. A program which provides for debt forgiveness on the mortgages underlying our Agency RMBS is likely to have a negative impact on the value of our Agency RMBS, our ability to finance these securities and the interest income which we earn on such securities.

As provided above, recent legislation has changed the relationship between FNMA and FHLMC and the U.S. Government. The appointment of Representative Watt as director of the FHFA as well as future legislation could further change the relationship between FNMA and FHLMC and the U.S. Government which could also nationalize, privatize, or eliminate such entities entirely. In March 2014, Senate Banking Committee Chairman Tim Johnson and Ranking Member Mike Crapo announced an agreement on their own version of GSE reform which would eventually replace FNMA and FHLMC with a new system. Any law affecting these GSEs may create market uncertainty and have the effect of reducing the actual or perceived credit quality of securities issued or guaranteed by FNMA or FHLMC. Any law affecting these GSEs may create market uncertainty and have the effect of reducing the actual or perceived credit quality of securities issued or guaranteed by FNMA or FHLMC. As a result, such laws could increase the risk of loss on our investments in Agency RMBS guaranteed by FNMA and/or FHLMC. It also is possible that such laws could adversely impact the market for such securities and spreads at which they trade. All of the foregoing could materially and adversely affect our financial condition and results of operations.

*We are subject to the risk that U.S. Government agencies and/or GSEs may not be able to fully satisfy their guarantees of Agency RMBS or that these guarantee obligations may be repudiated, which may adversely affect the value of our assets and our ability to sell or finance these securities.*

The interest and principal payments we receive on the Agency RMBS in which we invest are guaranteed by FNMA, FHLMC or GNMA. Unlike the GNMA securities in which we may invest, the principal and interest on securities issued by FNMA and FHLMC are not guaranteed by the U.S. government. All the Agency RMBS in which we invest depend on a steady stream of payments on the mortgages underlying the securities.

As conservator of FNMA and FHLMC, the FHFA may disaffirm or repudiate contracts (subject to certain limitations for qualified financial contracts) that FHLMC or FNMA entered into prior to the FHFA's appointment as conservator if it determines, in its sole discretion, that performance of the contract is burdensome and that disaffirmation or repudiation of the contract promotes the orderly administration of its affairs. The HERA requires the FHFA to exercise its right to disaffirm or repudiate most contracts within a reasonable period of time after its appointment as conservator. FNMA and FHLMC have disclosed that the FHFA has disaffirmed certain consulting and other contracts that these entities entered into prior to the FHFA's appointment as conservator. FHLMC and FNMA have also disclosed that the FHFA has advised that it does not intend to repudiate any guarantee obligation relating to FNMA's and FHLMC's mortgage-related securities, because the FHFA views repudiation as incompatible with the goals of the conservatorship. In addition, the HERA provides that mortgage loans and mortgage-related assets that have been transferred to a FHLMC or FNMA securitization trust must be held for the beneficial owners of the related mortgage-related securities, and cannot be used to satisfy the general creditors of FHLMC or FNMA.

If the guarantee obligations of FHLMC or FNMA were repudiated by the FHFA, payments of principal and/or interest to holders of Agency RMBS issued by FHLMC or FNMA would be reduced in the event of any borrowers' late payments or failure to pay or a servicer's failure to remit borrower payments to the trust. In that case, trust administration and servicing fees could be paid from mortgage payments prior to distributions to holders of Agency RMBS. Any actual direct compensatory damages owed due to the repudiation of FHLMC or FNMA's guarantee obligations may not be sufficient to offset any shortfalls experienced by holders of Agency RMBS. The FHFA also has the right to transfer or sell any asset or liability of FHLMC or FNMA, including its guarantee obligation, without any approval, assignment or consent. If the FHFA were to transfer FHLMC or FNMA's guarantee obligations to another party, holders of Agency RMBS would have to rely on that party for satisfaction of the guarantee obligation and would be exposed to the credit risk of that party.

In 2014, we invested in risk sharing securities issued by FNMA and FHLMC. Principal and interest payments on these securities are based on the performance of a specified pool of Agency residential mortgages. The payments due on these securities, however, are not secured by the referenced mortgages, but are full faith and credit obligations of Fannie Mae or Freddie Mac respectively. There is no implicit or explicit guarantee of these obligations by FHFA or that FHFA would satisfy such obligations if FNMA and/or FHLMC were to default.

*We operate in a highly competitive market for investment opportunities and competition may limit our ability to acquire desirable investments in our Target Assets and could also affect the pricing of these securities.*

We operate in a highly competitive market for investment opportunities. Currently, our profitability depends, in large part, on our ability to acquire our Target Assets at attractive prices. In acquiring these assets, we compete with a variety of institutional investors, including other REITs, specialty finance companies, public and private funds (including other funds managed by our Manager), commercial and investment banks, commercial finance and insurance companies and other financial institutions. Many of our competitors are substantially larger and have considerably greater financial, technical, marketing and other resources than we do. Other REITs have recently raised, or may raise, additional capital, and may have investment objectives that overlap with ours, which may create additional competition for investment opportunities. Some competitors may have a lower cost of funds and access to funding sources that may not be available to us, such as funding from the U.S. Government. Many of our competitors are not subject to the operating constraints associated with REIT tax compliance or maintenance of an exemption from the 1940 Act. In addition, some of our competitors may have higher risk tolerances or different risk assessments, which could allow them to consider a wider variety of investments and establish more relationships than us. Furthermore, competition for investments in our Target Assets may lead to the price of such assets increasing, which may further limit our ability to generate desired returns. We cannot assure you that the competitive pressures we face will not have a material adverse effect on our business, financial condition and results of operations. Also, as a result of this competition, desirable investments in these assets may be limited in the future and we may not be able to take advantage of attractive investment opportunities from time to time, as we can provide no assurance that we will be able to identify and make investments that are consistent with our investment objectives.

*A lack of liquidity in our investments may adversely affect our business.*

The assets we acquire are not publicly traded. A lack of liquidity may result from the absence of a willing buyer or an established market for these assets, as well as legal or contractual restrictions on resale or the unavailability of financing for these assets. In addition, mortgage-related assets generally experience periods of illiquidity, especially during periods of economic stress such as the recent economic recession which resulted in increased delinquencies and defaults with respect to residential and commercial mortgage loans. The illiquidity of our investments may make it difficult for us to sell such investments if the need or desire arises. In addition, if we are required to liquidate all or a portion of our portfolio quickly, we may realize significantly less than the value at which we have previously recorded our investments. Further, we may face other restrictions on our ability to liquidate an investment in a business entity to the extent that we or our Manager has or could be attributed with material, non-public information regarding such business entity. As a result, our ability to vary our portfolio in response to changes in economic and other conditions may be relatively limited, which could adversely affect our results of operations and financial condition.

*Adverse developments in the broader residential mortgage market may adversely affect the value of the assets in which we invest.*

Since 2007, the residential mortgage market in the United States has experienced a variety of unprecedented difficulties and changed economic conditions, including defaults, credit losses and liquidity concerns. Certain commercial banks, investment banks and insurance companies announced extensive losses from exposure to the residential mortgage market. These losses reduced financial industry capital, leading to reduced liquidity for some institutions. These factors have impacted investor perception of the risk associated with real estate-related assets, including Agency RMBS and other high-quality RMBS assets. As a result, values for RMBS assets, including some Agency RMBS and other AAA-rated RMBS assets, have experienced a certain amount of volatility. Further increased volatility and deterioration in the broader residential mortgage and RMBS markets may adversely affect the performance and market value of the Agency RMBS and Non-Agency RMBS in which we invest.

Our most significant investments are Agency RMBS and to a lesser extent Non-Agency RMBS and Agency and Non-Agency CMBS. We need to rely on our securities as collateral for our financings. Any decline in their value, or perceived market uncertainty about their value, would likely make it difficult for us to obtain financing on favorable terms or at all, or maintain our compliance with terms of any financing arrangements already in place. The securities we acquire are classified for accounting purposes as available-for-sale. All assets classified as available-for-sale are reported at fair value, based on market prices from third-party sources. We have elected to include any unrealized gains and losses in our earnings. If market conditions result in a decline in the fair value of our assets, our financial position and results of operations could be adversely affected.

*A prolonged economic recession and further declining real estate values could impair our assets and harm our operations.*

The risks associated with our business are more severe during economic recessions and are compounded by declining real estate values. The Non-Agency RMBS and Non-Agency CMBS in which we invest a part of our capital will be particularly sensitive to these risks. Declining real estate values will likely reduce the level of new mortgage loan originations since borrowers often use appreciation in the value of their existing properties to support the purchase of additional properties. Borrowers will also be less able to pay principal and interest on loans underlying the securities in which we invest if the value of residential and commercial real estate weakens further. Further, declining real estate values significantly increase the likelihood that we will incur losses on Non-Agency RMBS and Non-Agency CMBS in the event of default because the value of collateral on the mortgages underlying such securities may be insufficient to cover the outstanding principal amount of the loan. Any sustained period of increased payment delinquencies, foreclosures or losses could adversely affect our net interest income from Non-Agency RMBS and Non-Agency CMBS in our portfolio, which could have an adverse effect on our financial condition, results of operations and our ability to make distributions to our stockholders.

*Our investments are subject to a significant change in prepayments speeds affecting the value of our portfolio and possibly adversely affecting yields.*

The value of our assets may be affected by prepayment rates on residential mortgage loans. We acquire RMBS and anticipate that the underlying residential mortgages loans will prepay at a projected rate generating an expected yield. If we purchase assets at a premium to par value, when borrowers prepay their residential mortgage loans faster than expected, the corresponding prepayments on the mortgage-related securities may reduce the expected yield on such securities because we will have to amortize the related premium on an accelerated basis. In the case of Agency RMBS whole pools and certain other investment grade rated securities, we will be required to make a retrospective adjustment to historical amortization. Conversely, if we purchase assets at a discount to par value, when borrowers prepay their residential mortgage loans slower than expected, the decrease in corresponding prepayments on the RMBS may reduce the expected yield on such securities because we will not be able to accrete the related discount as quickly as originally anticipated and, in the case of Agency RMBS whole pools and certain other investment grade rated securities, we will have to make a retrospective adjustment to historical amortization.

Commercial mortgages frequently limit the ability of the borrower to prepay, thereby providing a certain level of prepayment protection. Common restrictions include yield maintenance and prepayment penalties, the proceeds of which are generally at least partially allocable to these securities, as well as defeasance.

*Our investments in Non-Agency RMBS are generally subject to losses.*

In general, losses on a mortgaged property securing a mortgage loan included in a securitization will be borne first by the equity holder of the property, then by a cash reserve fund or letter of credit, if any, then by the holder of a mezzanine loan or B-Note, if any, then by the “first loss” subordinated security holder and then by the holder of a higher-rated security. In the event of default and the exhaustion of any equity support, reserve fund, letter of credit, mezzanine loans or B-Notes, and any classes of securities junior to those in which we invest, we will not be able to recover all of our investment in the securities we purchase. In addition, if the underlying mortgage portfolio has been overvalued by the originator, or if the values subsequently decline, less collateral is available to satisfy interest and principal payments due on the related Non-Agency RMBS. The prices of lower credit quality securities are generally less sensitive to interest rate changes than more highly rated investments, but more sensitive to adverse economic downturns or individual issuer developments.

*The mortgage loans underlying the Non-Agency RMBS that we invest in will be subject to defaults, foreclosure timeline extension, fraud and residential price depreciation and unfavorable modification of loan principal amount, interest rate and amortization of principal, which could result in losses to us.*

Our investments in Non-Agency RMBS are subject to the risks of defaults, foreclosure timeline extension, fraud and home price depreciation and unfavorable modification of loan principal amount, interest rate and amortization of principal, accompanying the underlying residential mortgage loans. The ability of a borrower to repay a mortgage loan secured by a residential property is dependent upon the income or assets of the borrower. A number of factors may impair borrowers’ abilities to repay their loans, including:

- adverse changes in national and local economic and market conditions;
- changes in governmental laws and regulations, fiscal policies and zoning ordinances and the related costs of compliance with laws and regulations, fiscal policies and ordinances;
- costs of remediation and liabilities associated with environmental conditions such as indoor mold;
- the potential for uninsured or under-insured property losses;

- acts of God, including earthquakes, floods and other natural disasters, which may result in uninsured losses; and
- acts of war or terrorism, including the consequences of terrorist attacks, such as those that occurred on September 11, 2001.

In the event of defaults on the residential mortgage loans that underlie our investments in Non-Agency RMBS and the exhaustion of any underlying or any additional credit support, we may not realize our anticipated return on our investments and we may incur a loss on these investments. In addition, our investments in Non-Agency RMBS will be backed by residential real property but, in contrast to Agency RMBS, the principal and interest will not be guaranteed by a U.S. Government agency or a GSE. The ability of a borrower to repay these loans or other financial assets is dependent upon the income or assets of these borrowers.

*We may be affected by deficiencies in foreclosure practices of third parties, as well as related delays in the foreclosure process.*

Allegations of deficiencies in foreclosure documentation and servicing and foreclosure practices by several large mortgage servicers have raised various concerns relating to foreclosure practices. As a result of these alleged deficiencies in foreclosure practices, a number of servicers temporarily suspended foreclosure proceedings beginning in the second half of 2010 while they evaluated their foreclosure practices. In addition, on February 9, 2012, a group consisting of state attorneys general and state bank and mortgage regulators in 49 states reached a settlement with the largest mortgage servicers regarding foreclosure practices in the states' various jurisdictions. On January 7, 2013, the Office of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System announced a settlement with a number of mortgage servicers in lieu of continuing a foreclosure review process, under which borrowers who believed they were financially harmed by the foreclosure process in 2009 and 2010 were able to request an independent review of the process. The settlement, which includes funds for both direct payments to eligible borrowers and for other assistance such as loan modifications and forgiveness of deficiency judgments, ended the case-by-case reviews. Although servicers have generally ended their suspension of foreclosures, the processing of foreclosures continues to be slow in many states due to continuing issues in the servicer foreclosure process, including efforts by servicers to comply with regulatory consent orders and requirements, recent changes in the state foreclosure laws, court rules and proceedings and the pipeline of foreclosures resulting from these delays as well as the elevated level of foreclosures caused by the housing market downturn. We may incur substantial legal fees and court costs in acquiring a property through contested foreclosure or bankruptcy proceedings. We intend to continue to monitor and review the issues raised by the alleged improper foreclosure practices.

Prior to making investments in RMBS, our Manager carefully considers many factors, including housing prices and foreclosure timelines, and estimate loss assumptions. The concerns about deficiencies in foreclosure practices of servicers and related delays in the foreclosure process may impact our loss assumptions and affect the values of, and our returns on, our investments in RMBS. We cannot predict exactly how the servicing and foreclosure matters or the resulting litigation or settlement agreements will affect our business and cannot assure you that these matters will not impair our performance and reduce the return on our investments.

*The commercial mortgage loans underlying the CMBS we may acquire will be subject to defaults, foreclosure timeline extension, fraud and commercial price depreciation and unfavorable modification of loan principal amount, interest rate and amortization of principal, which could result in losses to us.*

CMBS may be secured by a single commercial mortgage loan or a pool of commercial mortgage loans. Commercial mortgage loans may be secured by multifamily or commercial property and are subject to risks of delinquency and foreclosure, and risks of loss that may be greater than similar risks associated with loans made on the security of residential property. The ability of a borrower to repay a loan secured by an income-producing property typically is dependent primarily upon the successful operation of such property rather than upon the existence of independent income or assets of the borrower. If the net operating income of the property is reduced, the borrower's ability or willingness to repay the loan may be impaired. Net operating income of an income-producing property can be affected by, among other things,

- tenant mix;
- success of tenant businesses;
- property management decisions;
- property location and condition;
- competition from comparable types of properties;
- changes in laws that increase operating expenses or limit rents that may be charged;
- any need to address environmental contamination at the property or the occurrence of any uninsured casualty at the property;
- changes in national, regional or local economic conditions and/or specific industry segments;
- declines in regional or local real estate values;
- declines in regional or local rental or occupancy rates;
- increases in interest rates;
- real estate tax rates and other operating expenses;
- changes in governmental rules, regulations and fiscal policies, including environmental legislation; and
- acts of God, terrorist attacks, social unrest and civil disturbances.

*If our Manager overestimates the loss-adjusted yields of our CMBS investments, we may experience losses.*

Our Manager will analyze any CMBS investments we may acquire based on loss-adjusted yields, taking into account estimated future losses on the mortgage loans included in the securitization's pool of loans, and the estimated impact of these losses on expected future cash flows. Our Manager's loss estimates may not prove accurate, as actual results may vary from estimates. In the event that our Manager underestimates the pool level losses relative to the price we pay for a particular CMBS investment, we may experience losses with respect to such investment.

*We do not control the special servicing of the mortgage loans included in the CMBS in which we invest and, in such cases, the special servicer may take actions that could adversely affect our interests.*

With respect to CMBS in which we invest, overall control over the special servicing of the related underlying mortgage loans will be held by a “directing certificateholder” or a “controlling class representative,” which is appointed by the holders of the most subordinate class of CMBS in such series. We may not have the right to appoint the directing certificateholder. In connection with the servicing of the specially serviced mortgage loans, the related special servicer may, at the direction of the directing certificateholder, take actions with respect to the specially serviced mortgage loans that could adversely affect our interests.

*The residential and/or commercial mortgages which we may acquire in the form of whole-loans are subject to individual borrower credit risk.*

To the extent we acquire residential or commercial first lien mortgages or whole-loans; we will be subject to individual credit risk. While such mortgages will be secured by the single family residences or commercial properties, we will rely on the borrower’s willingness to make timely payments. In certain states our ability to recover against a borrower on a residential property may be limited to either recovering from the borrower or foreclosing on the property. In either case, depending on state and local laws, such recovery could take an extended period of time and expense, during which period we would not be receiving any payments, thereby negatively impacting our cash flow. Similarly, to the extent a commercial loan is non-recourse, our recovery will be limited to the underlying real property which depending on several factors, including the location of such property, could take an extended period of time and expense, thereby negatively impacting our cash flow.

*The receivables underlying the ABS we may acquire are subject to credit exposure, which could result in losses to us.*

ABS are securities backed by various asset classes including auto loans, student loans, credit card loans, equipment loans, floor plan loans and small business loans fully guaranteed as to principal and interest by the U.S. Small Business Administration, or the SBA. ABS remain subject to the credit exposure of the underlying receivables. In the event of increased rates of delinquency with respect to any receivables underlying our ABS, we may not realize our anticipated return on these investments.

*Our investments are recorded at fair value, and quoted prices or observable inputs may not be available to determine such value, resulting in the use of significant unobservable inputs to determine value.*

We expect that the values of some of our investments may not be readily determinable. We measure the fair value of these investments on at least a monthly basis. The fair value at which our assets are recorded may not be an indication of their realizable value. Ultimate realization of the value of an asset depends to a great extent on economic and other conditions that are beyond the control of our Manager, our Company or our Board of Directors. Further, fair value is only an estimate based on good faith judgment of the price at which an investment can be sold since market prices of investments can only be determined by negotiation between a willing buyer and seller. If we were to liquidate a particular asset, the realized value may be more than or less than the amount at which such asset is valued. Accordingly, the value of our common stock could be adversely affected by our determinations regarding the fair value of our investments, whether in the applicable period or in the future. Additionally, such valuations may fluctuate over short periods of time.

Our determination of the fair value of our investments for GAAP includes inputs provided by third-party dealers and pricing services. Valuations of certain investments in which we invest are often difficult to obtain. In general, dealers and pricing services heavily disclaim their valuations. Dealers may claim to furnish valuations only as an accommodation and without special compensation, and so they may disclaim any and all liability for any direct, incidental, or consequential damages arising out of any inaccuracy or incompleteness in valuations, including any act of negligence or breach of any warranty. Depending on the complexity and illiquidity of a security, valuations of the same security can vary substantially from one dealer or pricing service to another. Therefore, our results of operations for a given period could be adversely affected if our determinations regarding the fair market value of these investments are materially different than the values that we ultimately realize upon their disposal. Due to an overall increase in market volatility, the valuation process has been particularly challenging recently as market events have made valuations of certain assets more difficult, unpredictable and volatile.

*Declines in value of the assets in which we invest will adversely affect our financial position and results of operations, and make it more costly to finance these assets.*

We use our investments as collateral for our financings. Any decline in their value, or perceived market uncertainty about their value, would likely make it difficult for us to obtain financing on favorable terms or at all, or maintain our compliance with terms of any financing arrangements already in place. Our investments in mortgage-backed securities are recorded at fair value under a fair value option election at the time of purchase with changes in fair value reported in earnings. As a result, a decline in fair values of our mortgage-backed securities could reduce both our earnings and stockholders’ equity. If market conditions result in a decline in the fair value of our assets, our financial position and results of operations could be adversely affected.

*An increase in interest rates may cause a decrease in the availability of certain of our Target Assets, which could adversely affect our ability to acquire assets that satisfy our investment objectives and to generate income and make distributions.*

Rising interest rates generally reduce the demand for mortgage loans due to the higher cost of borrowing. A reduction in the volume of mortgage loans originated may affect the volume of our Target Assets available to us, which could adversely affect our ability to acquire assets that satisfy our investment objectives. Rising interest rates may also cause our assets that were issued prior to an interest rate increase to provide yields that are below prevailing market interest rates. If rising interest rates cause us to be unable to acquire a sufficient volume of our Target Assets with a yield that is above our borrowing cost, our ability to satisfy our investment objectives and to generate income and make distributions may be materially and adversely affected.

The relationship between short-term and longer-term interest rates is often referred to as the “yield curve.” Ordinarily, short-term interest rates are lower than longer-term interest rates. If short-term interest rates rise disproportionately relative to longer-term interest rates (a flattening of the yield curve), our borrowing costs may increase more rapidly than the interest income earned on our assets. Because our investments, on average, generally bear interest based on longer-term rates than our borrowings, a flattening of the yield curve would tend to decrease our net income and the market value of our net assets. Additionally, to the extent cash flows from investments that return scheduled and unscheduled principal are reinvested, the spread between the yields on the new investments and available borrowing rates may decline, which would likely decrease our net income. It is also possible that short-term interest rates may exceed longer-term interest rates (a yield curve inversion); in which event our borrowing costs may exceed our interest income and we could incur operating losses.

***Increases in interest rates could adversely affect the value of our investments and cause our interest expense to increase, which could result in reduced earnings or losses and negatively affect our profitability as well as the cash available for distribution to our stockholders.***

We invest in Agency RMBS and Non-Agency RMBS. We also invest in Agency and Non-Agency CMBS and ABS. In a normal yield curve environment, investments in such assets will generally decline in value if long-term interest rates increase. Declines in market value may ultimately reduce earnings or result in losses to us, which may negatively affect cash available for distribution to our stockholders.

A significant risk associated with our Target Assets is the risk that both long-term and short-term interest rates will increase significantly. If long-term rates increased significantly, the market value of these investments would decline, and the duration and weighted average life of the investments would increase. We could realize a loss if the securities were sold. At the same time, an increase in short-term interest rates would increase the amount of interest owed on any repurchase agreements we may enter into, thereby potentially reducing the net interest margin we earn on our investments and the income available for distribution to our shareholders.

Market values of our investments may decline without any general increase in interest rates for a number of reasons, such as increases or expected increases in defaults, or increases or expected increases in voluntary prepayments for those investments that are subject to prepayment risk or widening of credit spreads.

In addition, our operating results depend in large part on the difference between the income from our assets and our financing costs. We anticipate that, in most cases in a period of rising interest rates, the income from such assets will respond more slowly to interest rate fluctuations than the cost of our borrowings. Consequently, changes in interest rates, particularly short-term interest rates, may significantly influence our net income. Increases in these rates will tend to decrease our net income and market value of our assets.

***Interest rate mismatches between our RMBS backed by ARMs or hybrid ARMs and our borrowings used to fund our purchases of these assets may cause us to suffer losses.***

We may fund our RMBS with borrowings that have interest rates that adjust more frequently than the interest rate indices and repricing terms of RMBS backed by adjustable-rate mortgages, or ARMs, or hybrid ARMs. Accordingly, if short-term interest rates increase, our borrowing costs may increase faster than the interest rates on RMBS backed by ARMs or hybrid ARMs adjust. As a result, in a period of rising interest rates, we could experience a decrease in net income or a net loss.

In most cases, the interest rate indices and repricing terms of RMBS backed by ARMs or hybrid ARMs and our borrowings will not be identical, thereby potentially creating an interest rate mismatch between our investments and our borrowings. While the historical spread between relevant short-term interest rate indices has been relatively stable, there have been periods when the spread between these indices was volatile. During periods of changing interest rates, these interest rate index mismatches could reduce our net income or produce a net loss, and adversely affect the level of our dividends and the market price of our common stock.

In addition, RMBS backed by ARMs or hybrid ARMs will typically be subject to lifetime interest rate caps that limit the amount an interest rate can increase through the maturity of the RMBS. However, our borrowings under repurchase agreements typically are not subject to similar restrictions. Accordingly, in a period of rapidly increasing interest rates, the interest rates paid on our borrowings could increase without limitation while caps could limit the interest rates on these types of RMBS. This problem is magnified for RMBS backed by ARMs or hybrid ARMs that are not fully indexed. Further, some RMBS backed by ARMs or hybrid ARMs may be subject to periodic payment caps that result in a portion of the interest being deferred and added to the principal outstanding. As a result, we may receive less cash income on these types of RMBS than we need to pay interest on our related borrowings. These factors could reduce our net interest income and cause us to suffer a loss during periods of rising interest rates.

As of December 31, 2014, none of our Agency RMBS, excluding Interest-Only Strips, were secured by ARMs or hybrid ARMs. Our Non-Agency RMBS, however, were secured by ARMs, Hybrid ARMs, pay option ARMs and fixed-rate mortgages. Further, there can be no assurance that this will not change in the future.

***Interest rate fluctuations may adversely affect the level of our net income and the value of our assets and common stock.***

Interest rates are highly sensitive to many factors, including governmental monetary and tax policies, domestic and international economic and political considerations and other factors beyond our control. Interest rate fluctuations present a variety of risks, including the risk of a narrowing of the difference between asset yields and borrowing rates, flattening or inversion of the yield curve and fluctuating prepayment rates, and may adversely affect our income and the value of our assets and common stock.

Increases in interest rates may negatively affect the market value of the fixed-rate mortgages and hybrid ARMs in which we may invest. Our investments in these mortgage-backed securities are recorded at fair value under a fair value option election at the time of purchase with changes in fair value reported in earnings and any decrease in our earnings could cause the market value of our common stock to decline. In addition, rising interest rates generally reduce the demand for consumer and commercial credit, including mortgage loans, due to the higher cost of borrowing. A reduction in the volume of mortgage loans originated may affect the volume of MBS available to us, which could affect our ability to acquire assets that satisfy our investment objectives.

Since the onset of the economic recession in 2008, the Federal Reserve has maintained an accommodative monetary policy. Recent improvements in the U.S. labor market and overall U.S. economy has led to a discussion of the return of monetary policy to a more “normal” stature. In the press release issued subsequent to the Federal Open Market Committee on January 27 and 28, 2015, the Federal Reserve reaffirmed its view that the current 0% to 0.25% target range for the federal funds rate is appropriate as it works to support continued progress toward its dual goal of maximum employment and price stability. While not providing a definitive time frame for when it expects to begin raising short term interest rates, the Federal Reserve reiterated that it can remain patient in beginning to normalize monetary policy and that such actions will be driven by economic data. Accordingly, we cannot project with certainty when and the rate at which the Federal Reserve will increase the Federal Funds rate and what impact that will have on our business and operating results.

***Changes in prepayment rates may adversely affect our profitability.***

The RMBS assets we acquire are backed by pools of residential mortgage loans. We receive payments, generally, from the payments that are made on these underlying residential mortgage loans. While commercial mortgages frequently include limitations on the ability of the borrower to prepay, residential mortgages generally do not. When borrowers prepay their residential mortgage loans at rates that are faster than expected, the net result is prepayments that are faster than expected on the related RMBS. These faster than expected payments may adversely affect our profitability.

We may purchase RMBS assets that have a higher interest rate than the then prevailing market interest rate. In exchange for this higher interest rate, we may pay a premium to par value to acquire the asset. In accordance with accounting rules, we amortize this premium over the expected term of the asset based on our prepayment assumptions. If the asset is prepaid in whole or in part at a faster than expected rate, however, we must expense all or a part of the remaining unamortized portion of the premium that was paid at the time of the purchase, which will adversely affect our profitability.

Prepayment rates generally increase when interest rates fall and decrease when interest rates rise, but changes in prepayment rates are difficult to predict. House price appreciation, while increasing the value of the collateral underlying our RMBS, may increase prepayment rates as borrowers may be able to refinance at more favorable terms. Prepayments can also occur when borrowers default on their residential mortgages and the mortgages are prepaid from the proceeds of a foreclosure sale of the property (an involuntary prepayment), or when borrowers sell the property and use the sale proceeds to prepay the mortgage as part of a physical relocation. Prepayment rates also may be affected by conditions in the housing and financial markets, increasing defaults on residential mortgage loans, which could lead to an acceleration of the payment of the related principal, general economic conditions and the relative interest rates on fixed-rate mortgages and ARMs. While we seek to manage prepayment risk, in selecting RMBS investments we must balance prepayment risk against other risks, the potential returns of each investment and the cost of hedging our risks. No strategy can completely insulate us from prepayment or other such risks, and we may deliberately retain exposure to prepayment or other risks.

In addition, a decrease in prepayment rates may adversely affect our profitability. When borrowers prepay their residential mortgage loans at slower than expected rates, prepayments on the RMBS may be slower than expected. These slower than expected payments may adversely affect our profitability. We may purchase RMBS assets that have a lower interest rate than the then prevailing market interest rate. In exchange for this lower interest rate, we may pay a discount to par value to acquire the asset. In accordance with accounting rules, we accrete this discount over the expected term of the asset based on our prepayment assumptions. If the asset is prepaid at a slower than expected rate, however, we must accrete the remaining portion of the discount at a slower than expected rate. This will extend the expected life of the asset and result in a lower than expected yield on assets purchased at a discount to par.

***We may make investments in non-U.S. dollar denominated securities, which will be subject to currency rate exposure and risks associated with the uncertainty of foreign laws and markets.***

Some of our real estate-related securities investments may be denominated in foreign currencies, and therefore, we expect to have currency risk exposure to any such foreign currencies. A change in foreign currency exchange rates may have an adverse impact on returns on our non-U.S. dollar denominated investments. Although we may hedge our foreign currency risk subject to the REIT income tests, we may not be able to do so successfully and may incur losses on these investments as a result of exchange rate fluctuations. To the extent that we invest in non-U.S. dollar denominated securities, in addition to risks inherent in the investment in securities generally discussed in this Form 10-K, we will also be subject to risks associated with the uncertainty of foreign laws and markets including, but not limited to, unexpected changes in regulatory requirements, political and economic instability in certain geographic locations, difficulties in managing international operations, currency exchange controls, potentially adverse tax consequences, additional accounting and control expenses and the administrative burden of complying with a wide variety of foreign laws.

***We are highly dependent on information systems and systems failures could significantly disrupt our business, which may, in turn, negatively affect the market price of our common stock and our ability to make distributions to all stockholders.***

Our business is highly dependent on communications and information systems of our Manager and other third-party service providers. Any failure or interruption of our Manager's or other third-party service providers' systems could cause delays or other problems in our securities trading activities, which could have a material adverse effect on our operating results and negatively affect the market price of our common stock and our ability to make distributions to our stockholders.

***Loss of our exemption from regulation pursuant to the 1940 Act would adversely affect us.***

We conduct our business so as not to become regulated as an investment company under the 1940 Act in reliance on the exemption provided by Section 3(c)(5)(C) of the 1940 Act. Section 3(c)(5)(C), as interpreted by the staff of the SEC, requires that: (i) at least 55% of our investment portfolio consist of "mortgages and other liens on and interest in real estate," or "qualifying real estate interests," and (ii) at least 80% of our investment portfolio consist of qualifying real estate interests plus "real estate-related assets." In satisfying this 55% requirement, based on pronouncements of the SEC staff, we may treat whole pool Agency RMBS as qualifying real estate interests. The SEC staff has not issued guidance with respect to whole pool Non-Agency RMBS. Accordingly, based on our own judgment and analysis of the SEC's pronouncements with respect to whole pool Agency RMBS, we may also treat Non-Agency RMBS issued with respect to an underlying pool of mortgage loans in which we hold all of the certificates issued by the pool as qualifying real estate interests. We currently treat partial pool Agency, Non-Agency RMBS and partial pool CMBS as real estate-related assets. We treat any interest rate swaps or other derivative hedging transactions we enter into as miscellaneous assets that will not exceed 20% of our total assets. We rely on guidance published by the SEC staff or on our analyses of guidance published with respect to other types of assets to determine which assets are qualifying real estate assets and real estate-related assets.

The SEC in 2011 solicited public comment on a wide range of issues relating to Section 3(c)(5)(C), including the nature of the assets that qualify for purposes of the exemption and whether mortgage REITs should be regulated in a manner similar to investment companies. To date the staff has not issued any additional guidance. There can be no assurance that the laws and regulations governing the 1940 Act status of REITs, including the guidance of the Division of Investment Management of the SEC regarding this exemption, will not change in a manner that adversely affects our operations. To the extent that the SEC or its staff publishes new or different guidance with respect to these matters, we may be required to adjust our strategy accordingly. In addition, we may be limited in our ability to make certain investments and these limitations could require us to hold assets we might wish to sell or to sell assets we might wish to hold. To the extent that the SEC staff provides more specific guidance regarding any of the matters bearing upon the exemption we rely on from the 1940 Act, we may be required to adjust our strategy accordingly. Any additional guidance from the SEC staff could provide additional flexibility to us, or it could further inhibit our ability to pursue the strategies we have chosen.

The mortgage related investments that we acquire are limited by the provisions of the 1940 Act and the rules and regulations promulgated thereunder. If the SEC determines that any of these securities are not qualifying interests in real estate or real estate-related assets, adopts a contrary interpretation with respect to these securities or otherwise believes we do not satisfy the above exceptions or changes its interpretation of the above exceptions, we could be required to restructure our activities or sell certain of our assets. We may be required at times to adopt less efficient methods of financing certain of our mortgage related investments and we may be precluded from acquiring certain types of higher yielding securities. The net effect of these factors would be to lower our net interest income. If we fail to qualify for an exemption from registration as an investment company or an exclusion from the definition of an investment company, our ability to use leverage would be substantially reduced. Further, if the SEC determined that we were an unregistered investment company, we could be subject to monetary penalties and injunctive relief in an action brought by the SEC, we would potentially be unable to enforce contracts with third parties which could seek to obtain rescission of transactions undertaken during the period for which it was established we were an unregistered investment company. If we were required to register as an investment company, it would result in a change of our financial statement requirements. Our business will be materially and adversely affected if we fail to qualify for this exemption from regulation pursuant to the 1940 Act. In addition, the loss of our 1940 Act exemption would also permit our Manager to terminate the Management Agreement, which could result in material adverse effect on our business and results of operations.

***The downgrade of the U.S. government's or certain European countries' credit ratings and any future downgrades of the U.S. government's or certain European countries' credit ratings may materially adversely affect our business, financial condition and results of operations.***

On August 5, 2011, Standard & Poor's downgraded the U.S. government's credit rating for the first time in history. More recently, concerns over economic recession, geopolitical issues, the ability of certain European sovereigns to honor their debt obligations and the exposure of certain European financial institutions to such debt, potential deflationary pressures in Europe, slowing growth in China, rapid decline in the price of oil and certain other commodities, the availability and cost of financing, the mortgage market, uncertainty related to political events such as the government spending and tax policy and uncertain real estate market have contributed to volatility and relatively low expectations for the world economy and domestic and international markets. Because FNMA and FHLMC are in conservatorship of the U.S. government, downgrades to the U.S. government's credit rating could impact the credit risk associated with Agency MBS and, therefore, decrease the value of the Agency MBS in which we invest. In addition, the downgrade of the U.S. government's credit rating and the credit ratings of certain European countries has created broader financial turmoil and uncertainty, which has recently weighed heavily on the global banking system. Therefore, the downgrade of the U.S. government's credit rating and the credit ratings of certain European countries and any future downgrades of the U.S. government's credit rating or the credit ratings of certain European countries may materially adversely affect our business, financial condition and results of operations.

#### **Risks related to financing and hedging**

***Our strategy involves significant leverage, which may amplify losses.***

Our current target leverage generally ranges between five to ten times the amount of our stockholders' equity (calculated in accordance with U.S. GAAP). We incur this leverage by borrowing against a substantial portion of the market value of our assets. By utilizing this leverage, we can enhance our returns. Nevertheless, this leverage, which is fundamental to our investment strategy, also creates significant risks.

As a result of our significant leverage, we may incur substantial losses if our borrowing costs increase. Our borrowing costs may increase for any of the following reasons:

- short-term interest rates increase;
- the market value of our securities decreases;
- interest rate volatility increases; or
- the availability of financing in the market decreases.

***There can be no assurance that our Manager will be able to prevent mismatches in the maturities of our assets and liabilities.***

Because we employ financial leverage in funding our portfolio, mismatches in the maturities of our assets and liabilities can create risk in the need to continually renew or otherwise refinance our liabilities. Our net interest margins are dependent upon a positive spread between the returns on our asset portfolio and our overall cost of funding. Our Manager actively employs portfolio-wide and security-specific risk measurement and management processes in our daily operations. Our Manager's risk management tools include software and services licensed or purchased from third parties, in addition to proprietary systems and analytical methods developed internally. There can be no assurance that these tools and the other risk management techniques described above will protect us from asset/liability risks.

*We may be subject to margin calls under our master repurchase agreements, which could result in defaults or force us to sell assets under adverse market conditions or through foreclosure.*

We have entered into master repurchase agreements with various financial institutions and borrow under these master repurchase agreements to finance the acquisition of assets for our investment portfolio. Pursuant to the terms of borrowings under our master repurchase agreements, a decline in the value of the subject assets may result in our lenders initiating margin calls. A margin call means that the lender requires us to pledge additional collateral to re-establish the ratio of the value of the collateral to the amount of the borrowing. The specific collateral value to borrowing ratio that would trigger a margin call is not set in the master repurchase agreements and will not be determined until we engage in a repurchase transaction under these agreements. Our fixed-rate securities generally are more susceptible to margin calls as increases in interest rates tend to have a greater negative affect on the market value of fixed-rate securities. If we are unable to satisfy margin calls, our lenders may foreclose on our collateral. The threat of or occurrence of a margin call could force us to sell our assets, either directly or through a foreclosure, under adverse market conditions. Because of the significant leverage we have, we may incur substantial losses upon the threat or occurrence of a margin call.

*If a counterparty to our repurchase transactions defaults on its obligation to resell the underlying security back to us at the end of the transaction term, or if the value of the underlying security has declined as of the end of that term, or if we default on our obligations under the repurchase agreement, we will lose money on our repurchase transactions.*

When we engage in repurchase transactions, we generally sell securities to lenders (repurchase agreement counterparties) and receive cash from these lenders. The lenders are obligated to resell the same securities back to us at the end of the term of the transaction. Because the cash we receive from the lender when we initially sell the securities to the lender will be less than the value of those securities (this difference is the haircut), if the lender defaults on its obligation to resell the same securities back to us we may incur a loss on the transaction equal to the amount of the haircut (assuming there was no change in the value of the securities). We would also lose money on a repurchase transaction if the value of the underlying securities has declined as of the end of the transaction term, as we would have to repurchase the securities based on their initial value but would receive securities worth less than that amount. Further, if we default on one of our obligations under a repurchase transaction, the lender can terminate the transaction and cease entering into any other repurchase transactions with us. Our inability to post adequate collateral for a margin call by the counterparty, in a timeframe as short as the close of the same business day, could result in a condition of default under our repurchase agreements, thereby enabling the counterparty to liquidate the collateral pledged by us, which may have a material adverse effect on our financial position, results of operations and cash flows. Our repurchase agreements contain cross-default provisions, such that if a default occurs under an agreement with any specific lender, that lender could also declare a default under other repurchase agreements or other financing or derivative contracts, if any, with such lender. Further, 19 of the counterparties to our repurchase agreements held, as of December 31, 2014, collateral valued in excess of 5% of our stockholders' equity as security for our obligations under the applicable repurchase agreements. Any losses we incur on our repurchase transactions could adversely affect our earnings and thus our cash available for distribution to our stockholders.

*If a counterparty to one of our swap agreements or TBAs defaults on its obligations, we may incur losses.*

If a counterparty to one of the bilateral swap agreements that we enter into or TBAs that we enter into defaults on its obligations under the agreement, we may not receive payments due under the agreement, and thus, we may lose any unrealized gain associated with the agreement. In the case of a swap agreement, the fact that such swap agreement hedged a liability means that the liability could cease to be hedged upon the default of a counterparty. Additionally, we may also risk the loss of any collateral we have pledged to secure our obligations under a bilateral swap agreement if the counterparty, or in the case of a cleared swap, if our clearing broker, becomes insolvent or files for bankruptcy.

*Failure to procure adequate repurchase agreement financing, which generally have short terms, or to renew or replace repurchase agreement financing as it matures, would adversely affect our results of operations.*

We use repurchase agreement financing as a strategy to increase the return on our investment portfolio. However, we may not be able to achieve our desired leverage ratio for a number of reasons, including if the following events occur:

- our lenders do not make repurchase agreement financing available to us at acceptable rates;
- certain of our lenders exit the repurchase market;
- our lenders require that we pledge additional collateral to cover our borrowings, which we may be unable to do; or
- we determine that the leverage would expose us to excessive risk.

We cannot assure you that any, or sufficient, repurchase agreement financing will be available to us on terms that are acceptable to us. In recent years, investors and financial institutions that lend in the securities repurchase market, have tightened lending standards in response to the difficulties and changed economic conditions that have materially adversely affected the MBS market. These market disruptions have been most pronounced in the Non-Agency MBS market, and the impact has also extended to Agency MBS, which has made the value of these assets unstable and relatively illiquid compared to prior periods. Any decline in their value, or perceived market uncertainty about their value, would make it more difficult for us to obtain financing on favorable terms or at all, or maintain our compliance with terms of any financing arrangements then in place. Additionally, the lenders from which we seek to obtain repurchase agreement financing may have owned or financed MBS that have declined in value and caused the lender to suffer losses as a result of the 2007 to 2010 downturn in the residential, as well as commercial, mortgage markets. If these conditions persist, these institutions may be forced to exit the repurchase market, become insolvent or further tighten lending standards or increase the amount of equity capital or haircut required to obtain financing, and in such event, could make it more difficult for us to obtain financing on favorable terms or at all. Further, the implementation of Basel III and the Dodd Frank Act will increase the regulatory capital which financial institutions must hold against repurchase financing, thereby making the cost of providing such financing more expensive. This is likely to result in less availability of repurchase financing and/or higher pricing. In the event that we cannot obtain sufficient funding on acceptable terms, there may be a negative impact on the value of our common stock and our ability to make distributions, and you may lose part or all of your investment.

As of December 31, 2014, we had amounts outstanding under repurchase agreements with 21 separate lenders, had repurchase agreements with 24 different lenders and our currently in discussions with several additional potential lenders. Prior to entering into a lending relationship with any financial institution, our Manager does a thorough credit review of such potential lender. Notwithstanding the foregoing, a material adverse development involving one or more major financial institutions or the financial markets in general, in addition to the regulatory changes discussed above, could result in our lenders reducing our access to funds available under our repurchase agreements or terminating such agreements altogether. Dramatic declines in the housing market from 2007 to 2010, with decreasing home prices and increasing foreclosures and unemployment, resulted in significant asset write-downs by financial institutions, which caused many financial institutions to seek additional capital, to merge with other institutions, and, in some cases, to fail. As all of our repurchase agreements are uncommitted and renewable at the discretion of our lenders, these conditions could cause our lenders to determine to reduce or terminate our access to future borrowings at virtually any time which could materially adversely affect our business and profitability. Furthermore, if a number of our lenders became unwilling or unable continue to provide us with financing; we could be forced to sell assets in order to maintain liquidity. Forced sales under adverse market conditions may result in lower sales prices than ordinary market sales made in the normal course of business.

Furthermore, because we rely primarily on short-term borrowings, our ability to achieve our investment objective will depend not only on our ability to borrow money in sufficient amounts and on favorable terms, but also on our ability to renew or replace on a continuous basis our maturing short-term borrowings. If we are not able to renew or replace maturing borrowings due to changes in the regulatory environment or for any other reason, we will have to sell some or all of our assets, possibly under adverse market conditions which may have a material adverse effect on our financial position, results of operations and cash flows. In addition, the aforementioned changes to the regulatory capital requirements imposed on our lenders may significantly increase the cost of the financing that they provide to us. Our lenders also may revise their eligibility requirements for the types of assets they are willing to finance or the terms of such financings, based on, among other factors, the recent changes in the regulatory environment and their management of perceived risk, particularly with respect to assignee liability.

***Our repurchase agreement financing may require us to provide additional collateral and may restrict us from leveraging our assets as fully as desired.***

We use repurchase agreements to finance acquisitions of our Target Assets. If the market value of the asset pledged or sold by us to a financing institution pursuant to a repurchase agreement declines, we may be required by the financing institution to provide additional collateral or pay down a portion of the funds advanced, but we may not have the funds available to do so, which could result in defaults. Posting additional collateral to support our credit will reduce our liquidity and limit our ability to leverage our assets, which could adversely affect our business. In the event we do not have sufficient liquidity to meet such requirements, financing institutions can accelerate repayment of our indebtedness, increase interest rates, liquidate our collateral or terminate our ability to borrow. Such a situation would likely result in a rapid deterioration of our financial condition and possibly necessitate a filing for bankruptcy protection.

On the date each month that principal payments are announced (i.e., the factor day for our Agency RMBS), the value of our Agency RMBS pledged as collateral under our repurchase agreements is reduced by the amount of the prepaid principal and, as a result, our lenders will typically initiate a margin call requiring the pledge of additional collateral or cash, in an amount equal to such prepaid principal, in order to re-establish the required ratio of borrowing to collateral value under such repurchase agreements. Accordingly, with respect to our Agency RMBS the announcement on factor day of principal prepayments is in advance of our receipt of the related scheduled payment, thereby creating a short-term receivable for us in the amount of such principal prepayments; however, under our repurchase agreements, we may receive a margin call relating to the related reduction in value of our Agency RMBS and prior to receipt of this short-term receivable, be required to post additional collateral or cash in an amount equal to the product of the advance rate of such repurchase agreement and the principal prepayment on or about factor day, which would reduce our liquidity during the period in which the short term receivable is outstanding. As a result, in order to meet any such margin calls, we could be forced to sell assets in order to maintain liquidity. Forced sales under adverse market conditions may result in lower sales prices than ordinary market sales in the normal course of business.

Further, financial institutions providing the repurchase facilities may require us to maintain a certain amount of cash uninvested or to set aside non-levered assets sufficient to maintain a specified liquidity position which would allow us to satisfy our collateral obligations. As a result, we may not be able to leverage our assets as fully as we would choose which could reduce our return on equity. If we are unable to meet these collateral obligations, our financial condition could deteriorate rapidly.

***Lenders may require us to enter into restrictive covenants relating to our operations.***

When we obtain further financing, lenders could impose restrictions on us that would affect our ability to incur additional debt, our capability to make distributions to stockholders and our flexibility to determine our operating policies. Loan documents we execute may contain negative covenants that limit, among other things, our ability to repurchase stock, distribute more than a certain amount of our funds from operations, and employ leverage beyond certain amounts.

***Our rights under repurchase agreements may be subject to the effects of the bankruptcy laws in the event of the bankruptcy or insolvency of us or our counterparties under the repurchase agreements.***

In the event of our insolvency or bankruptcy, certain repurchase agreements may qualify for special treatment under the U.S. Bankruptcy Code, the effect of which, among other things, would be to allow the lender under the applicable repurchase agreement to avoid the automatic stay provisions of the U.S. Bankruptcy Code and to take possession of and liquidate the assets that we have pledged under their repurchase agreements. In the event of the insolvency or bankruptcy of a lender during the term of a repurchase agreement, the lender may be permitted, under applicable insolvency laws, to repudiate the contract, and our claim against the lender for damages may be treated simply as the claim of an unsecured creditor. In addition, if the lender is a broker or dealer subject to the Securities Investor Protection Act of 1970, or an insured depository institution subject to the Federal Deposit Insurance Act, our ability to exercise our rights to recover our securities under a repurchase agreement or to be compensated for any damages resulting from the lender's insolvency may be further limited by those statutes. These claims would be subject to significant delay and, if and when received, may be substantially less than the damages we actually incur.

***An increase in our borrowing costs relative to the interest that we receive on our portfolio investments may adversely affect our profitability and cash available for distribution to our stockholders.***

As long as we earn a positive spread between interest and other income we earn on our leveraged assets and our borrowing costs, we believe that we can generally increase our profitability by using greater amounts of leverage. We cannot, however, assure you that repurchase financing will remain an efficient source of long-term financing for our assets. The amount leverage that we use may be limited because our lenders might not make funding available to us or they may require that we provide additional collateral to secure our borrowings. If our financing strategy is not viable, we will have to find alternative forms of financing for our assets which may not be available to us on acceptable terms or at acceptable rates. In addition, in response to certain interest rate and investment environments or to changes in the market liquidity, we could adopt a strategy of reducing our leverage by selling assets or not reinvesting principal payments as MBS amortize and/or prepay, thereby decreasing the outstanding amount of our related borrowings. Such an action could reduce interest income, interest expense and net income, the extent of which would be dependent on the level of reduction in assets and liabilities as well as the sale prices for which assets were sold.

As our financings mature, we will be required either to enter into new borrowings or to sell certain of our investments. Since we rely primarily on borrowings under repurchase agreements to finance our assets, our ability to achieve our investment objectives depends on our ability to borrow funds in sufficient amounts and on acceptable terms, and on our ability to renew or replace maturing borrowings on a continuous basis. Our repurchase agreement credit lines are renewable at the discretion of our lenders and, as such; do not contain guaranteed roll-over terms. Our ability to enter into repurchase transactions in the future will depend on the market value of our assets pledged to secure the specific borrowings, the availability of acceptable financing and market liquidity and other conditions existing in the lending market at that time. If we are unable to renew or replace maturing borrowings, we could be forced to sell assets in order to maintain liquidity. Forced sales under adverse market conditions could result in lower sales prices than ordinary market sales in the normal course of business. Further, an increase in short-term interest rates at the time that we seek to enter into new borrowings would reduce the spread between our returns on our assets and the cost of our borrowings. This would adversely affect our returns on our assets, which might reduce earnings and, in turn, cash available for distribution to our stockholders.

***We may enter into hedging transactions that could expose us to contingent liabilities in the future.***

Subject to maintaining our qualification as a REIT and exemption from registration under the 1940 Act, part of our investment strategy may involve entering into economic hedging transactions that could require us to fund cash payments in certain circumstances (such as the early termination of the hedging instrument caused by an event of default or other early termination event, or the decision by a counterparty to request margin securities it is contractually owed under the terms of the hedging instrument). The amount due would be equal to the unrealized loss of the open swap positions with the respective counterparty and could also include other fees and charges. These economic losses will be reflected in our results of operations, and our ability to fund these obligations will depend on the liquidity of our assets and access to capital at the time, and the need to fund these obligations could adversely impact our financial condition.

***Hedging against interest rate exposure may adversely affect our earnings, which could reduce our cash available for distribution to our stockholders.***

Subject to maintaining our qualification as a REIT and exemption from registration under the 1940 Act, we generally pursue various economic hedging strategies to seek to reduce our exposure to adverse changes in interest rates. Our hedging activity varies in scope based on the level and volatility of interest rates, the type of assets held and other changing market conditions. Interest rate hedging may fail to protect or could adversely affect us because, among other things:

- interest rate hedging can be expensive, particularly during periods of rising and volatile interest rates;
- available interest rate hedges may not correspond directly with the interest rate risk for which protection is sought;
- due to a credit loss, the duration of the hedge may not match the duration of the related liability;
- the amount of income that a REIT may earn from hedging transactions (other than hedging transactions that satisfy certain requirements of the Code or that are done through a TRS) to offset interest rate losses is limited by U.S. federal tax provisions governing REITs;
- the value of derivatives used for hedging may be adjusted from time to time in accordance with accounting rules to reflect changes in fair value. Downward adjustments or “mark-to-market losses,” would reduce our stockholders’ equity;
- the credit quality of the hedging counterparty owing money on the hedge may be downgraded to such an extent that it impairs our ability to sell or assign our side of the hedging transaction; and

- the hedging counterparty owing money in the hedging transaction may default on its obligation to pay.

Our hedging transactions, which are intended to limit losses, may actually adversely affect our earnings, which could reduce our cash available for distribution to our stockholders.

While the majority of our interest rate swaps are traded on a regulated exchange, certain hedging instruments are traded over the counter and do not trade on regulated exchanges and, therefore, are not guaranteed by an exchange or a clearing house. In addition over the counter instruments are more lightly regulated by U.S. and foreign governmental authorities. Consequently, there may be no requirements with respect to record keeping, financial responsibility or segregation of customer funds and positions. Furthermore, the enforceability of agreements underlying hedging transactions may depend on compliance with applicable statutory and commodity and other regulatory requirements and, depending on the identity of the counterparty, applicable international requirements. The business failure of a hedging counterparty with whom we enter into a hedging transaction which did not clear through a clearing house would most likely result in its default. Default by a party with whom we enter into a hedging transaction may result in the loss of unrealized profits and force us to cover our commitments, if any, at the then current market price. Although generally we seek to reserve the right to terminate our hedging positions, it may not always be possible to dispose of or close out a hedging position without the consent of the hedging counterparty and we may not be able to enter into an offsetting contract in order to cover our risk. There can be no assurance that a liquid secondary market will exist for any hedging instruments purchased or sold, and we may be required to maintain a position until exercise or expiration, which could result in losses.

**Risks associated with our relationship with our Manager**

***Our Manager has limited experience operating a REIT and we cannot assure you that our Manager’s past experience will be sufficient to successfully manage our business as a REIT.***

Our Manager has limited experience operating a REIT. The REIT provisions of the Code are complex, and any failure to comply with those provisions in a timely manner could prevent us from qualifying as a REIT or force us to pay unexpected taxes and penalties. In such event, our net income would be reduced and we could incur a loss.

***Our Board of Directors has approved very broad investment guidelines for our Manager and does not approve each investment and financing decision made by our Manager.***

Our Manager is authorized to follow very broad investment guidelines. Our Board of Directors periodically reviews our investment guidelines and our investment portfolio but does not, and is not required to review all of our proposed investments, except that an investment in a security structured or issued by another entity managed by our Manager must be approved by at least two thirds ( $\frac{2}{3}$ ) of our independent directors prior to such investment. In addition, in conducting periodic reviews, our Board of Directors may rely primarily on information provided to them by our Manager. Furthermore, our Manager may use complex strategies, and transactions entered into by our Manager may be costly, difficult or impossible to unwind by the time they are reviewed by our Board of Directors. Our Manager has great latitude within the broad parameters of our investment guidelines in determining the types and amounts of Agency and Non-Agency RMBS, CMBS, ABS and other portfolio investments it may decide are attractive investments for us, which could result in investment returns that are substantially below expectations or that result in losses, which would materially and adversely affect our business operations and results. Further, decisions made and investments and financing arrangements entered into by our Manager may not fully reflect the best interests of our stockholders.

***There are conflicts of interest in our relationship with our Manager that could result in decisions that are not in the best interests of our stockholders.***

We are subject to conflicts of interest arising out of our relationship with our Manager. During 2013, all of our officers apart from our chief financial officer, Steven M. Sherwyn, were employees of our Manager. Effective January 1, 2014, Mr. Sherwyn is no longer an employee of the Company, but an employee of our Manager as well. In addition, two of our directors, James W. Hirschmann III and Gavin L. James, are also employees of our Manager. Accordingly, as of January 1, 2014, we do not have any employees. Our Management Agreement with our Manager was negotiated between related parties and its terms, including fees and other amounts payable, may not be as favorable to us as if it had been negotiated at arm's length with an unaffiliated third party. In addition, the obligations of our Manager and its officers and personnel to engage in other business activities may reduce the time our Manager and its officers and personnel spend managing us.

We compete for investment opportunities directly with other client portfolios managed by our Manager. Clients of our Manager may have investment mandates and objectives that target the same assets as us. A substantial number of client accounts managed by our Manager have exposure to RMBS, CMBS and our other portfolio investments and may have similar investment mandates and objectives. In addition, our Manager may have additional clients that compete directly with us for investment opportunities in the future. Our Manager has an investment allocation policy in place that is intended to ensure that no single client is intentionally favored over another and that trades are allocated in a fair and equitable manner. We may compete with our Manager or its other clients for investment or financing opportunities sourced by our Manager; however, we may either not be presented with the opportunity or have to compete with our Manager to acquire these investments or have access to these sources of financing. Our Manager and our executive officers may choose to allocate favorable investments to itself or to its or other clients instead of to us. Further, at times when there are turbulent conditions in the mortgage markets or distress in the credit markets or other times when we will need focused support and assistance from our Manager, our Manager's other clients will likewise require greater focus and attention, placing our Manager's resources in high demand. In such situations, we may not receive the level of support and assistance that we may receive if we were internally managed or if our Manager did not act as a manager for other entities. There is no assurance that our Manager's allocation policies that address some of the conflicts relating to our access to investment and financing sources will be adequate to address all of the conflicts that may arise.

We pay our Manager a management fee that is not tied to our performance. The management fee may not sufficiently incentivize our Manager to generate attractive risk-adjusted returns for us. This could hurt both our ability to make distributions to our stockholders and the market price of our common stock. Furthermore, the compensation payable to our Manager will increase as a result of future issuances of our equity securities, even if the issuances are dilutive to existing stockholders.

Concurrently with our IPO, we sold 46,043 shares of our common stock to our Manager's deferred compensation plan, which made such investment on behalf of the beneficiaries of the plan, including certain executives and other employees of our Manager and its affiliates. These shares are subject to a two-year lock-up agreement from the date of our IPO with the underwriters from that offering. We issued 4,467 shares of our common stock to our Manager's deferred compensation plan on January 28, 2014, as a result of the stock component of our dividend declared on December 19, 2013. In April 2014, in conjunction with a follow-on equity offering, we sold 650,000 shares of common stock to our Manager in a private placement. These shares are subject to two-month lock-up agreement from the date of issuance with the underwriters of our follow-on offering. In addition, through December 31, 2014 our Manager had received three grants of restricted stock totaling 419,023 shares (inclusive of the stock component of the December 19, 2013 dividend). Each grant vests pro-rata over a three year period and to date a total of 90,612 shares have vested. To date, our Manager has not sold any of our common stock. To the extent our Manager elects to sell all or a portion of these shares in the future, our Manager's interests may be less aligned with our interests.

***We are dependent on our Manager and its key personnel for our success.***

We have no separate facilities and are completely reliant on our Manager. As of January 1, 2014, all of our executive officers and two of our directors are employees of our Manager. Our Manager has significant discretion as to the implementation of our investment and operating policies and strategies. Accordingly, we believe that our success will depend to a significant extent upon the efforts, experience, diligence, skill and network of business contacts of the executive officers and key personnel of our Manager. The executive officers and key personnel of our Manager evaluate, negotiate, close and monitor our investments; therefore, our success depends on their continued service. The departure of any of the executive officers or key personnel of our Manager could have a material adverse effect on our performance. In addition, we offer no assurance that our Manager will remain our investment manager or that we will continue to have access to our Manager's principals and professionals. The term of our Management Agreement with our Manager has now been extended until May 15, 2016, with automatic one-year renewals thereafter. If the Management Agreement is terminated and no suitable replacement is found to manage us, we may not be able to execute our business plan. Moreover, our Manager is not obligated to dedicate any of its personnel exclusively to us nor is it obligated to dedicate any specific portion of its time to our business, and none of our Manager's personnel are contractually dedicated to us under our Management Agreement with our Manager.

***The Management Agreement with our Manager was not negotiated on an arm's-length basis, may not be as favorable to us as if it had been negotiated with an unaffiliated third party and may be costly and difficult to terminate.***

As of January 1, 2014, all of our executive officers and two of our directors are employees of our Manager. Our Management Agreement with our Manager was negotiated between related parties and its terms, including fees payable, may not be as favorable to us as if it had been negotiated with an unaffiliated third party.

Termination of the Management Agreement with our Manager without cause is difficult and costly. Our independent directors review our Manager's performance and any fees payable to our Manager annually and, following the initial three-year term, the Management Agreement may be terminated annually upon the affirmative vote of at least two thirds ( $\frac{2}{3}$ ) of our independent directors based upon: (i) our Manager's unsatisfactory performance that is materially detrimental to us; or (ii) our determination that any fees payable to our Manager are not fair, subject to our Manager's right to prevent termination based on unfair fees by accepting a reduction of management fees agreed to by at least two thirds ( $\frac{2}{3}$ ) of our independent directors. We are required to provide our Manager 180 days prior notice of any such termination. Unless terminated for cause, we are required to pay our Manager a termination fee equal to three times the average annual management fee earned by our Manager during the prior 24-month period immediately preceding such termination, calculated as of the end of the most recently completed fiscal quarter before the date of termination. This provision increases the effective cost to us of electing not to renew, or defaulting in our obligations under, the Management Agreement, thereby adversely affecting our inclination to end our relationship with our Manager, even if we believe our Manager's performance is not satisfactory.

Our Manager is only contractually committed to serve us until May 15, 2016. The Management Agreement is automatically renewable for one-year terms; provided, however, that our Manager may terminate the Management Agreement annually upon 180 days prior notice. If the Management Agreement is terminated and no suitable replacement is found to manage us, we may not be able to execute our business plan.

Pursuant to the Management Agreement, our Manager does not assume any responsibility other than to render the services called for thereunder and is not responsible for any action of our Board of Directors in following or declining to follow its advice or recommendations. Our Manager maintains a contractual as opposed to a fiduciary relationship with us. Under the terms of the Management Agreement, our Manager, its officers, stockholders, members, managers, directors, personnel, any person controlling or controlled by our Manager and any person providing sub-advisory services to our Manager are not liable to us, our directors, our stockholders or any partners for acts or omissions performed in accordance with and pursuant to the Management Agreement, except because of acts constituting bad faith, willful misconduct, gross negligence, or reckless disregard of their duties under the Management Agreement. In addition, we indemnify our Manager, its officers, stockholders, members, managers, directors, personnel, any person controlling or controlled by our Manager and any person providing sub-advisory services to our Manager with respect to all expenses, losses, damages, liabilities, demands, charges and claims arising from acts of our Manager not constituting bad faith, willful misconduct, gross negligence, or reckless disregard of duties, performed in good faith in accordance with and pursuant to the Management Agreement.

***Our Manager's management fee is payable regardless of our performance.***

We pay our Manager a management fee regardless of the performance of our portfolio. Our Manager's entitlement to non-performance-based compensation might reduce its incentive to devote its time and effort to seeking assets that provide attractive risk-adjusted returns for our portfolio. This in turn could hurt both our ability to make distributions to our stockholders and the market price of our common stock.

***Our Manager is subject to extensive regulation as an investment advisor, which could adversely affect its ability to manage our business.***

Our Manager is subject to regulation as an investment advisor by various regulatory authorities that are charged with protecting the interests of its clients, including us. Instances of criminal activity and fraud by participants in the investment management industry and disclosures of trading and other abuses by participants in the financial services industry have led the U.S. government and regulators to consider increasing the rules and regulations governing, and oversight of, the U.S. financial system. This activity is expected to result in changes to the laws and regulations governing the investment management industry and more aggressive enforcement of the existing laws and regulations. Our Manager could be subject to civil liability, criminal liability, or sanction, including revocation of its registration as an investment adviser, revocation of the licenses of its employees, censures, fines, or temporary suspension or permanent bar from conducting business, if it is found to have violated any of these laws or regulations. Any such liability or sanction could adversely affect its ability to manage our business. Our Manager must continually address conflicts between its interests and those of its clients, including us. In addition, the SEC and other regulators have increased their scrutiny of potential conflicts of interest. We believe our Manager has procedures and controls that are reasonably designed to address these issues. However, appropriately dealing with conflicts of interest is complex and difficult and if our Manager fails, or appears to fail, to deal appropriately with conflicts of interest, it could face litigation or regulatory proceedings or penalties, any of which could adversely affect its ability to manage our business.

In fact, in January 2014 settlements of two separate and unrelated regulatory matters involving our Manager with the United States Department of Labor and the Securities and Exchange Commission were announced. The first matter involved the trading of Non-Agency RMBS and whether certain trades complied with the cross trading rules applicable to pension plans subject to Employee Retirement Income Security Act ("ERISA") and to SEC registered funds under the 1940 Act. Our Manager settled that matter without admitting or denying the charges and paying approximately \$7.4 million in compensation to clients and approximately \$1.6 million in fines to the regulators. The second matter involved the handling of an investment which prohibited ERISA accounts from holding it which was allocated in error to certain ERISA accounts. Our Manager settled that matter without admitting or denying the charges and paying \$10 million in compensation and \$2 million in fines. Neither matter related to the Company. The settlements will not adversely affect our Manager's ability to manage the Company's affairs.

**Risks related to our common stock**

***The market price and trading volume of our common stock may vary substantially.***

Our common stock is listed on the NYSE under the symbol "WMC". The stock markets, including the NYSE, have experienced significant price and volume fluctuations over the past several years. As a result, the market price of our common stock is likely to be similarly volatile, and investors in our common stock may experience a decrease in the value of their shares. Accordingly, no assurance can be given as to the ability of our stockholders to sell their common stock or the price that our stockholders may obtain for their common stock.

Some of the factors that could negatively affect the market price of our common stock include:

- actual or anticipated variations in our quarterly operating results;
- changes in our earnings estimates or publication of research reports about us or the real estate industry;
- changes in market valuations of similar companies;
- adverse market reaction to any increased indebtedness we incur in the future;
- additions to or departures of our Manager's key personnel;
- actions by our stockholders; and
- speculation in the press or investment community.

Market factors unrelated to our performance could also negatively impact the market price of our common stock. One of the factors that investors may consider in deciding whether to buy or sell our common stock is our distribution rate as a percentage of our stock price relative to market interest rates. If market interest rates increase, prospective investors may seek alternative investments paying higher dividends or interest. As a result, interest rate fluctuations and conditions in the capital markets can affect the market value of our common stock. For instance, if interest rates rise, it is likely that the market price of our common stock will decrease as market rates on interest-bearing securities increase.

*For as long as we are an emerging growth company, we will not be required to comply with certain reporting requirements, including those relating to accounting standards and disclosure about our executive compensation, that apply to other public companies.*

In April 2012, President Obama signed into law the Jumpstart Our Business Startups Act, or the JOBS Act. The JOBS Act contains provisions that, among other things, relax certain reporting requirements for “emerging growth companies,” including certain requirements relating to accounting standards and compensation disclosure. We are classified as an emerging growth company. For as long as we are an emerging growth company, which may be up to five full fiscal years from the date of our IPO, unlike other public companies, we will not be required to: (i) provide an auditor’s attestation report on management’s assessment of the effectiveness of our system of internal control over financial reporting pursuant to Section 404 of the Sarbanes-Oxley Act; (ii) comply with any new or revised financial accounting standards applicable to public companies until such standards are also applicable to private companies under Section 102(b)(1) of the JOBS Act; (iii) comply with any new requirements adopted by the Public Company Accounting Oversight Board, or the PCAOB, requiring mandatory audit firm rotation or a supplement to the auditor’s report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer; (iv) comply with any new audit rules adopted by the PCAOB after April 5, 2012 unless the SEC determines otherwise; (v) provide certain disclosure regarding executive compensation required of larger public companies; or (vi) hold shareholder advisory votes on executive compensation. We cannot predict if investors will find our common stock less attractive if we choose to rely on these exemptions. If some investors find our common stock less attractive as a result of any choices to reduce future disclosure, there may be a less active trading market for our common stock and our stock price may be more volatile.

As noted above, under the JOBS Act, emerging growth companies can delay adopting new or revised accounting standards that have different effective dates for public and private companies until such time as those standards apply to private companies. We currently take advantage of such extended transition period. Since we are not required to comply with new or revised accounting standards on the relevant dates on which adoption of such standards is required for other public companies, our financial statements may not be comparable to the financial statements of companies that comply with public company effective dates. If we were to elect to comply with these public company effective dates, such election would be irrevocable pursuant to Section 107 of the JOBS Act.

***Investing in our common stock may involve a high degree of risk.***

The investments that we make in accordance with our investment objectives may result in a high amount of risk when compared to alternative investment options and volatility or loss of principal. Our investments may be highly speculative and aggressive, and therefore an investment in our common stock may not be suitable for someone with lower risk tolerance.

***Common stock eligible for future sale may have adverse effects on our share price.***

We cannot predict the effect, if any, of future sales of our common stock, or the availability of shares for future sales, on the market price of our common stock. The market price of our common stock may decline significantly when the restrictions on resale (or lock up agreements) by certain of our stockholders lapse. Sales of substantial amounts of common stock or the perception that such sales could occur may adversely affect the prevailing market price for our common stock.

Also, we may issue additional shares in follow-on public offerings or private placements to make new investments or for other purposes. We are not required to offer any such shares to existing stockholders on a preemptive basis. Therefore, it may not be possible for existing stockholders to participate in such future share issuances, which may dilute the existing stockholders’ interests in us.

*We have not established a minimum distribution payment level and we cannot assure you of our ability to pay distributions in the future.*

We intend to pay quarterly distributions and to make distributions to our stockholders in an amount such that we distribute all or substantially all of our net taxable income, calculated in accordance with the REIT regulations, each year. We have not established a minimum distribution payment level and our ability to pay distributions may be adversely affected by a number of factors, including the risk factors described herein. All distributions will be made at the discretion of our Board of Directors and will depend on our earnings, our financial condition, debt covenants, maintenance of our REIT qualification and other factors as our Board of Directors may deem relevant from time to time. We believe that a change in any one of the following factors could adversely affect our results of operations and impair our ability to pay distributions to our stockholders:

- the profitability of our existing investments and the investment of net proceeds of any subsequent offering;
- our ability to make profitable investments;
- margin calls or other expenses that reduce our cash flow;
- decreases in the value of our portfolio or defaults in our asset portfolio; and
- the fact that anticipated operating expense levels may not prove accurate, as actual results may vary from estimates.

We cannot assure you that we will achieve investment results that will allow us to make a specified level of cash distributions or year-to-year increases in cash distributions in the future. In addition, some of our distributions may include a return in capital.

***Future offerings of debt or equity securities, which would rank senior to our common stock, may adversely affect the market price of our common stock.***

If we decide to issue debt or equity securities in the future, which would rank senior to our common stock, it is likely that they will be governed by an indenture or other instrument containing covenants restricting our operating flexibility. Additionally, any convertible or exchangeable securities that we issue in the future may have rights, preferences and privileges more favorable than those of our common stock and may result in dilution to owners of our common stock. We and, indirectly, our stockholders, will bear the cost of issuing and servicing such securities. Because our decision to issue debt or equity securities in any future offering will depend on market conditions and other factors beyond our control, we cannot predict or estimate the amount, timing or nature of our future offerings. Thus holders of our common stock will bear the risk of our future offerings reducing the market price of our common stock and diluting the value of their stock holdings in us. Furthermore, the compensation payable to our Manager will increase as a result of future issuances of our equity securities, including issuances upon exercise of the warrants, described below, even if the issuances are dilutive to existing stockholders.

*The dilutive effect of our outstanding warrants, including in certain circumstances, upon the future issuance of common stock, could have an adverse effect on the future market price of our common stock or otherwise adversely affect the interests of our common stockholders.*

On May 15, 2012, we issued and sold to certain institutional investors a number of warrants entitling them to purchase up to an aggregate of 1,115,893 shares of our common stock. These warrants had an initial exercise price of \$20.50 per share (subject to adjustment and limitation on exercise in certain circumstances) and are exercisable for seven years after the date of the warrants' issuance, or earlier upon notice of redemption by us. On October 3, 2012, the exercise price was adjusted to 19.44, as a result of the follow-on public offering. In addition, on January 28, 2014 the exercise price was further reduced to \$17.59, as a result of the stock portion of our dividend declared on December 19, 2013 and the number of shares purchasable increased to 1,232,916. As a result of the April 3, 2014 follow-on public offering and private placement, the exercise price of each of the outstanding warrants was reduced from \$17.59 to \$16.70. The exercise of the warrants in the future would be dilutive to holders of our common stock if our book value per share or the market price of our common stock is higher than the exercise price at the time of exercise. The potential for dilution from the warrants could have an adverse effect on the future market price of our common stock.

Further, the exercise price of the warrants will be adjusted under certain circumstances, including, subject to certain exceptions, if we sell common stock (or other securities convertible into or exchangeable for our common stock) in a public offering or private placement, for cash at a price per share (after deduction of underwriting discounts or placement fees and other expenses incurred by us that are attributable to the offering) that is less than the closing price of our common stock immediately prior to: (i) the announcement of the proposed sale in the case of public offerings; or (ii) the execution of the purchase agreement in the case of private placements. Accordingly, the exercise price will be adjusted downward in connection with any future offering and increase the dilutive effect of the warrants. Furthermore, any similar public offerings or private placements of our common stock we conduct in the future will likely increase the dilutive effect of the warrants.

#### **Risks related to our organization and structure**

*Our authorized but unissued shares of common and preferred stock may prevent a change in our control.*

Our amended and restated certificate of incorporation authorizes us to issue additional authorized but unissued shares of common or preferred stock. In addition, our Board of Directors may, without stockholder approval, amend our amended and restated certificate of incorporation to increase the aggregate number of our shares of stock or the number of shares of stock of any class or series that we have authority to issue and classify or reclassify any unissued shares of common or preferred stock and set the preferences, rights and other terms of the classified or reclassified shares. As a result, our Board of Directors may establish a series of shares of common or preferred stock that could delay or prevent a transaction or a change in control that might involve a premium price for our shares of common stock or otherwise be in the best interest of our stockholders.

*Ownership limitations may restrict change of control or business combination opportunities in which our stockholders might receive a premium for their shares.*

In order for us to qualify as a REIT for each taxable year after 2012, no more than 50% in value of our outstanding capital stock may be owned, directly or indirectly, by five or fewer individuals during the last half of any calendar year. "Individuals" for this purpose include natural persons, private foundations, some employee benefit plans and trusts, and some charitable trusts. To assist us in maintaining our qualification as a REIT, our amended and restated certificate of incorporation generally prohibits any person from directly or indirectly owning more than 9.8% in value or in number of shares, whichever is more restrictive, of the outstanding shares of our capital stock or more than 9.8% in value or in number of shares, whichever is more restrictive, of the outstanding shares of our common stock. This ownership limitation could have the effect of discouraging a takeover or other transaction in which holders of our common stock might receive a premium for their shares over the then prevailing market price or which holders might believe to be otherwise in their best interests.

*Provisions in our amended and restated certificate of incorporation, our amended and restated bylaws and Delaware law may have the effect of preventing or hindering a change in control and adversely affecting the market price of our common stock.*

Provisions in our amended and restated certificate of incorporation and our amended and restated bylaws and applicable provisions of the Delaware General Corporation Law may make it more difficult and expensive for a third party to acquire control of us even if a change of control would be beneficial to the interests of our stockholders. These provisions could discourage potential takeover attempts and could adversely affect the market price our common stock.

*We may pay distributions from offering proceeds, borrowings or the sale of assets to the extent that distributions exceed earnings or cash flow from our operations.*

We may pay distributions from offering proceeds, borrowings or the sale of assets to the extent that distributions exceed earnings or cash flow from our operations. Such distributions would reduce the amount of cash we have available for investing and other purposes and could be dilutive to our financial results. In addition, funding our distributions from our net proceeds may constitute a return of capital to our investors, which would have the effect of reducing each stockholder's basis in its shares of common stock.

#### **Tax risks**

*If we do not qualify as a REIT or fail to remain qualified as a REIT, we will be subject to U.S. federal income tax as a regular corporation and could face a substantial tax liability, which would reduce the amount of cash available for distribution to our stockholders.*

We believe we have operated and intend to continue to operate in a manner that allows us to qualify as a REIT commencing with our taxable year ended December 31, 2012. Our ability to satisfy the asset tests depends upon our analysis of the characterization and fair market values of our assets, some of which are not susceptible to a precise determination, and for which we will not obtain independent appraisals. Our compliance with the REIT income and quarterly asset requirements also depends upon our ability to successfully manage the composition of our income and assets on an ongoing basis. Accordingly, there can be no assurance that the IRS will not contend that our interests in subsidiaries or in securities of other issuers will not cause a violation of the REIT requirements.

If we were to fail to qualify as a REIT in any taxable year, we would be subject to U.S. federal income tax, including any applicable alternative minimum tax, on our taxable income at regular corporate rates, and dividends paid to our stockholders would not be deductible by us in computing our taxable income. Any resulting corporate tax liability could be substantial and would reduce the amount of cash available for distribution to our stockholders, which in turn could have an adverse impact on the value of our common stock. Unless we were entitled to relief under certain Code provisions, we also would be disqualified from taxation as a REIT for the four taxable years following the year in which we failed to qualify as a REIT.

***Dividends payable by REITs do not qualify for the reduced tax rates available for some dividends.***

The maximum tax rate applicable to income from “qualified dividends” payable to U.S. stockholders that are individuals, trusts and estates is currently 20%, exclusive of the 3.8% investment tax surcharge. Dividends payable by REITs, however, generally are not eligible for the qualified dividend reduced rates. Although the rules do not adversely affect the taxation of REITs or dividends payable by REITs, the more favorable rates applicable to regular corporate qualified dividends could cause investors who are individuals, trusts and estates to perceive investments in REITs to be relatively less attractive than investments in the stocks of non-REIT corporations that pay dividends, which could adversely affect the value of the stock of REITs, including our common stock.

***REIT distribution requirements could adversely affect our ability to execute our business plan.***

We generally must distribute annually at least 90% of our net taxable income, determined without regard to the dividends paid deduction and excluding net capital gains, in order for U.S. federal corporate income tax not to apply to earnings that we distribute. To the extent that we satisfy this distribution requirement, but distribute less than 100% of our REIT taxable income, we will be subject to U.S. federal corporate income tax on our undistributed REIT taxable income. In addition, we will be subject to a 4% nondeductible excise tax if the actual amount that we pay out to our stockholders in a calendar year is less than a minimum amount specified under U.S. federal tax laws. We intend to continue to make distributions to our stockholders to comply with the REIT requirements of the Internal Revenue Code.

From time to time, we may generate taxable income greater than our income for financial reporting purposes prepared in accordance with U.S. GAAP, or differences in timing between the recognition of taxable income and the actual receipt of cash may occur. For example, the tax code limits our ability to use capital losses to offset ordinary income, thereby requiring us to distribute such ordinary income. If we do not have other funds available in these situations we could be required to borrow funds on unfavorable terms, sell investments at disadvantageous prices or distribute amounts that would otherwise be invested in future acquisitions to make distributions sufficient to enable us to pay out enough of our taxable income to satisfy the REIT distribution requirement and to avoid corporate income tax and the 4% excise tax in a particular year. These alternatives could increase our costs or reduce our equity. Thus, compliance with the REIT requirements may hinder our ability to grow, which could adversely affect the value of our common stock.

***Even if we remain qualified as a REIT, we may face other tax liabilities that reduce our cash flow.***

Even if we remain qualified for taxation as a REIT, we may be subject to certain U.S. federal, state and local taxes on our income and assets, including taxes on any undistributed income, tax on income from some activities conducted as a result of a foreclosure, and state or local income, property and transfer taxes, such as mortgage recording taxes. Any of these taxes would decrease cash available for distribution to our stockholders. In addition, in order to meet the REIT qualification requirements, or to avert the imposition of a 100% tax that applies to certain gains derived by a REIT from dealer property or inventory, we hold some of our assets through a TRS or other subsidiary corporation that will be subject to corporate-level income tax at regular rates. Any of these taxes would decrease cash available for distribution to our stockholders.

***Complying with REIT requirements may cause us to liquidate or forgo otherwise attractive opportunities.***

To qualify as a REIT, we must ensure that at the end of each calendar quarter, at least 75% of the value of our assets consists of cash, cash items, government securities and qualified REIT real estate assets, including certain mortgage loans and securities. The remainder of our investments (other than government securities and qualified real estate assets) generally cannot include more than 10% of the outstanding voting securities of any one issuer or more than 10% of the total value of the outstanding securities of any one issuer. In addition, in general, no more than 5% of the value of our total assets (other than government securities and qualified real estate assets) can consist of the securities of any one issuer, and no more than 25% of the value of our total assets can be represented by securities of one or more TRSs. If we fail to comply with these requirements at the end of any calendar quarter, we must correct the failure within 30 days after the end of the calendar quarter or qualify for certain statutory relief provisions to avoid losing our REIT qualification and suffering adverse tax consequences. As a result, we may be required to liquidate from our investment portfolio otherwise attractive investments. These actions could have the effect of reducing our income and amounts available for distribution to our stockholders.

In addition to the asset tests set forth above, to qualify as a REIT we must continually satisfy tests concerning, among other things, the sources of our income, the amounts we distribute to our stockholders and the ownership of our stock. We may be unable to pursue investments that would be otherwise advantageous to us in order to satisfy the source-of-income or asset- diversification requirements for qualifying as a REIT. Thus, compliance with the REIT requirements may hinder our ability to make certain attractive investments.

***We may be required to report taxable income for certain investments in excess of the economic income we ultimately realize from them.***

We acquired and may acquire in the future mortgage-backed securities and other portfolio instruments in the secondary market for less than their face amount. In addition, pursuant to our ownership of certain mortgage-backed securities, we may be treated as holding certain debt instruments acquired in the secondary market for less than their face amount. The discount at which such securities or debt instruments are acquired may reflect doubts about their ultimate collectability rather than current market interest rates. The amount of such discount will nevertheless generally be treated as “market discount” for U.S. federal income tax purposes. Accrued market discount is reported as income when, and to the extent that, any payment of principal of the mortgage-backed security or debt instrument is made. If we collect less on the mortgage-backed security or debt instrument than our purchase price plus the market discount we had previously reported as income, we may not be able to benefit from any offsetting capital loss deductions to the extent we do not have offsetting capital gains.

In addition, pursuant to our ownership of certain mortgage-backed securities or debt instruments, we may be treated as holding distressed debt investments that are subsequently modified by agreement with the borrower. If the amendments to the outstanding debt are “significant modifications” under applicable Treasury regulations, the modified debt may be considered to have been reissued to us at a gain in a debt-for-debt exchange with the borrower. In that event, we may be required to recognize taxable gain to the extent the principal amount of the modified debt exceeds our adjusted tax basis in the unmodified debt, even if the value of the debt or the payment expectations have not changed.

Moreover, some of the mortgage-backed securities or debt instruments that we acquire may have been issued with original issue discount. We are required to report such original issue discount based on a constant yield method and will be taxed based on the assumption that all future projected payments due on such mortgage-backed securities will be made. If such mortgage-backed securities turn out not to be fully collectable, an offsetting loss deduction will become available only in the later year that uncollectability is provable.

Finally, in the event that mortgage-backed securities or any debt instruments we are treated as holding pursuant to our investments in mortgage-backed securities are delinquent as to mandatory principal and interest payments, we may nonetheless be required to continue to recognize the unpaid interest as taxable income as it accrues, despite doubt as to its ultimate collectability. Similarly, we may be required to accrue interest income with respect to subordinate mortgage-backed securities at the stated rate regardless of whether corresponding cash payments are received or are ultimately collectable. In each case, while we would in general ultimately have an offsetting loss deduction available to us when such interest was determined to be uncollectable, the utility of that deduction could depend on our having taxable income in that later year or thereafter.

***Certain apportionment rules may affect our ability to comply with the REIT asset and gross income tests.***

The Code provides that a regular or a residual interest in a real estate mortgage investment conduit, or REMIC, is generally treated as a real estate asset for the purpose of the REIT asset tests, and any amount includible in our gross income with respect to such an interest is generally treated as interest on an obligation secured by a mortgage on real property for the purpose of the REIT gross income tests. If, however, less than 95% of the assets of a REMIC in which we hold an interest consist of real estate assets (determined as if we held such assets), we will be treated as holding our proportionate share of the assets of the REMIC for the purpose of the REIT asset tests and receiving directly our proportionate share of the income of the REMIC for the purpose of determining the amount of income from the REMIC that is treated as interest on an obligation secured by a mortgage on real property. In connection with the expanded Agency RMBS-backed HARP loan program in which we may invest, the IRS issued guidance providing that, among other things, if a REIT holds a regular interest in an “eligible REMIC,” or a residual interest in an “eligible REMIC” that informs the REIT that at least 80% of the REMIC’s assets constitute real estate assets, then the REIT may treat 80% of the interest in the REMIC as a real estate asset for the purpose of the REIT income and asset tests. Although the portion of the income from such a REMIC interest that does not qualify for purposes of the REIT 75% gross income test would likely be qualifying income for the purpose of the 95% REIT gross income test, the remaining 20% of the REMIC interest generally would not qualify as a real estate asset, which could adversely affect our ability to satisfy the REIT asset tests. Accordingly, owning such a REMIC interest could adversely affect our ability to qualify as a REIT.

***The “taxable mortgage pool” rules may increase the taxes that we or our stockholders may incur, and may limit the manner in which we effect future securitizations.***

Securitizations could result in the creation of taxable mortgage pools for U.S. federal income tax purposes. As a REIT, so long as we own 100% of the equity interests in a taxable mortgage pool, we generally would not be adversely affected by the characterization of the securitization as a taxable mortgage pool. Certain categories of stockholders, however, such as foreign stockholders eligible for treaty or other benefits, stockholders with net operating losses, and certain tax-exempt stockholders that are subject to unrelated business income tax, could be subject to increased taxes on a portion of their dividend income from us that is attributable to the taxable mortgage pool. In addition, to the extent that our stock is owned by tax-exempt “disqualified organizations,” such as certain government-related entities and charitable remainder trusts that are not subject to tax on unrelated business income, we may incur a corporate level tax on a portion of our income from the taxable mortgage pool. In that case, we may reduce the amount of our distributions to any disqualified organization whose stock ownership gave rise to the tax. Moreover, we would be precluded from selling equity interests in these securitizations to outside investors, or selling any debt securities issued in connection with these securitizations that might be considered to be equity interests for tax purposes. These limitations may prevent us from using certain techniques to maximize our returns from securitization transactions.

***Our ability to invest in and dispose of “to be announced” securities could be limited by our election to be subject to tax as a REIT.***

We may purchase Agency RMBS through “to-be-announced” forward contracts, or TBAs. In certain instances, rather than take delivery of the Agency RMBS subject to a TBA, we may dispose of the TBA through a dollar roll transaction in which we agree to purchase similar securities in the future at a predetermined price or otherwise, which may result in the recognition of income or gains. We account for dollar roll transactions as purchases and sales of securities. The law is unclear regarding whether TBAs will be qualifying assets for the 75% asset test and whether income and gains from dispositions of TBAs will be qualifying income for the 75% gross income test. Accordingly, our ability to purchase Agency RMBS through TBAs and to dispose of TBAs, through dollar roll transactions or otherwise, could be limited.

***The failure of securities subject to repurchase agreements to qualify as real estate assets could adversely affect our ability to qualify as a REIT.***

We enter into financing arrangements that are structured as sale and repurchase agreements pursuant to which we nominally sell certain of our securities to a counterparty and simultaneously enter into an agreement to repurchase these securities at a later date in exchange for a purchase price. Economically, these agreements are financings which are secured by the securities sold pursuant thereto. We believe that we will be treated for REIT asset and income test purposes as the owner of the securities that are the subject of any such sale and repurchase agreement notwithstanding that such agreement may transfer record ownership of the securities to the counterparty during the term of the agreement. It is possible, however, that the IRS could assert that we did not own the securities during the term of the sale and repurchase agreement, in which case we could fail to qualify as a REIT.

***Liquidation of assets may jeopardize our REIT qualification.***

To qualify as a REIT, we must comply with requirements regarding our assets and our sources of income. If we are compelled to liquidate our investments to repay obligations to our lenders, we may be unable to comply with these requirements, ultimately jeopardizing our qualification as a REIT, or we may be subject to a 100% tax on any resultant gain if we sell assets that are treated as dealer property or inventory.

***Complying with REIT requirements may limit our ability to hedge effectively and may cause us to incur tax liabilities.***

The REIT provisions of the Code substantially limit our ability to hedge our assets and liabilities. Any income from a hedging transaction we enter into to manage risk of interest rate changes with respect to borrowings made or to be made to acquire or carry real estate assets does not constitute “gross income” for purposes of the 75% or 95% gross income tests. To the extent that we enter into other types of hedging transactions, the income from those transactions is likely to be treated as non-qualifying income for purposes of both of the gross income tests. As a result of these rules, we limit our use of advantageous hedging techniques, and we may implement those hedges through a domestic TRS. This could increase the cost of our hedging activities because our TRS would be subject to tax on gains or expose us to greater risks associated with changes in interest rates than we would otherwise want to bear. In addition, losses in our TRS will generally not provide any tax benefit, except for being carried forward against future taxable income in the TRS.

*Qualifying as a REIT involves highly technical and complex provisions of the Code.*

Qualification as a REIT involves the application of highly technical and complex Code provisions for which only limited judicial and administrative authorities exist. Even a technical or inadvertent violation could jeopardize our REIT qualification. Our qualification as a REIT will depend on our satisfaction of certain asset, income, organizational, distribution, stockholder ownership and other requirements on a continuing basis. In addition, our ability to satisfy the requirements to qualify as a REIT depends in part on the actions of third parties over which we have no control or only limited influence, including in cases where we own an equity interest in an entity that is classified as a partnership for U.S. federal income tax purposes.

**Item 1B. Unresolved Staff Comment**

None

**Item 2. Properties**

We do not own any property. Our executive and administrative offices are located in Pasadena, California in office space shared with our Manager.

**Item 3. Legal Proceedings**

None.

**Item 4. Mine Safety Disclosures.**

Not applicable.

**PART II**

**Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Our common stock is listed on the NYSE under the symbol “WMC”. The following table sets forth the high, low and last sales prices for our common stock, as reported on the NYSE:

<u>Period</u>	<u>High</u>	<u>Low</u>	<u>Close</u>
<b>2014</b>			
First Quarter . . . . .	\$17.05	\$14.64	\$15.64
Second Quarter . . . . .	\$15.68	\$13.50	\$14.17
Third Quarter . . . . .	\$15.34	\$13.51	\$14.78
Fourth Quarter . . . . .	\$15.81	\$13.91	\$14.70
<b>2013</b>			
First Quarter . . . . .	\$23.49	\$19.90	\$23.24
Second Quarter . . . . .	\$23.98	\$16.37	\$17.46
Third Quarter . . . . .	\$17.86	\$14.55	\$15.99
Fourth Quarter . . . . .	\$17.48	\$14.75	\$14.88

The following table summarizes our dividends declared on common stock, on a per share basis, for the years ended 2014 and 2013:

<u>Declaration Date</u>	<u>Record Date</u>	<u>Payment Date</u>	<u>Common Stock Dividend</u>
<b>2014</b>			
March 20, 2014 . . . . .	March 31, 2014	April 29, 2014	\$0.67
June 19, 2014 . . . . .	June 30, 2014	July 29, 2014	\$0.67
September 23, 2014 . . . . .	October 3, 2014	October 28, 2014	\$0.70
December 18, 2014 . . . . .	December 29, 2014	January 27, 2015	\$0.70
<b>2013</b>			
April 1, 2013 . . . . .	April 12, 2013	April 30, 2013	\$0.95
June 20, 2013 . . . . .	July 1, 2013	July 29, 2013	\$0.90
September 19, 2013 . . . . .	September 30, 2013	October 29, 2013	\$0.90
December 19, 2013 . . . . .	December 30, 2013	January 28, 2014	\$2.35(1)

(1) Consisting of cash and stock. For stockholders who elected to receive the entire \$2.35 per share dividend in stock, each stockholder received 0.1590 shares in newly issued common stock for each common share that they held as of the dividend record date. For stockholders who elected to receive the dividend in cash, or did not make an election, each stockholder received \$0.9159 per share in cash and 0.0970 shares in newly issued common stock for each common share that they held as of the dividend record date.

In order to maintain our qualification as a REIT, we must make annual distributions to our stockholders of at least 90% of our taxable income (not including net capital gains). We have adopted a policy of paying regular quarterly dividends on our common stock. A combination of cash and stock dividends has been paid on our common stock since our initial public offering. Dividends are declared at the discretion of the Board of Directors and depend on actual and anticipated cash from operations, our financial condition, capital requirements, the annual distribution requirements under the REIT provisions of the Internal Revenue Code and other factors the Board of Directors may consider relevant.

As of March 2, 2015, we had 6 registered holders of our common stock and 41,719,801 shares outstanding.

**Securities Authorized for Issuance Under Equity Compensation Plans**

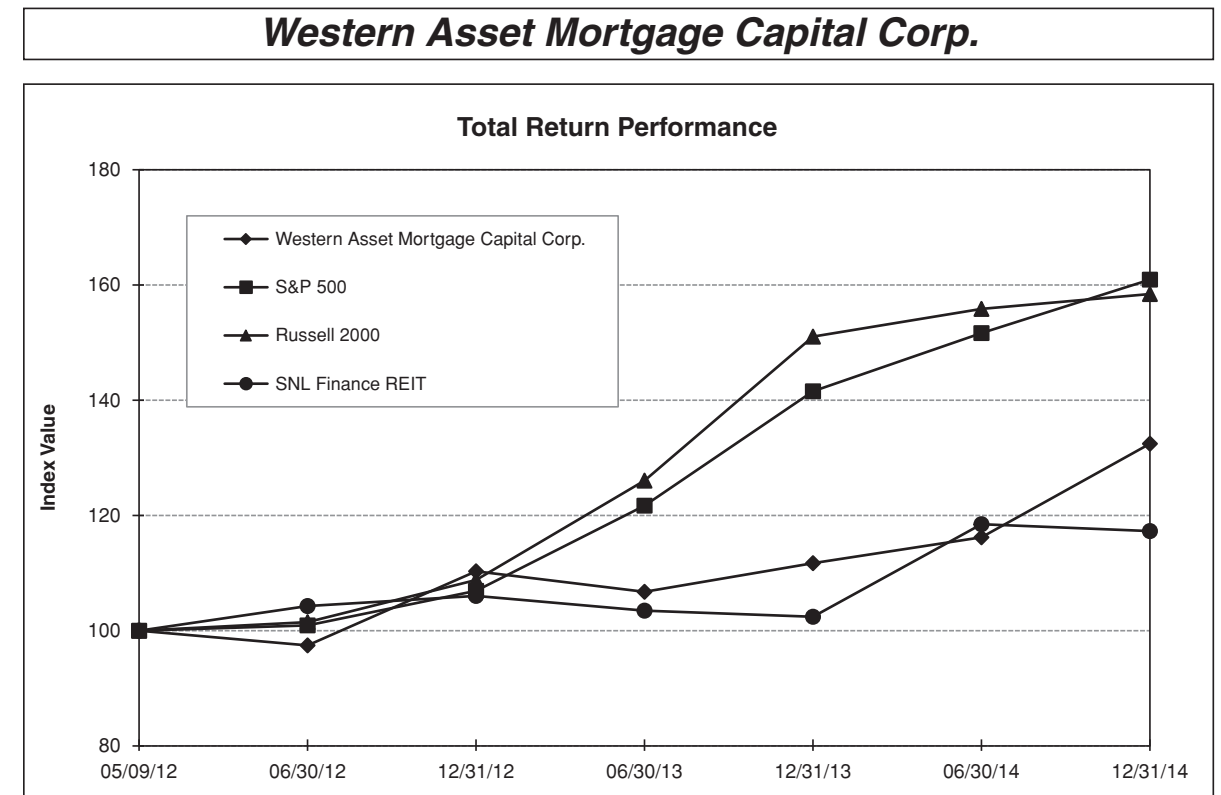

In conjunction with our IPO and concurrent private placement, our Board of Directors approved the Western Asset Mortgage Capital Corporation Equity Plan (the “Equity Plan”) and the Western Asset Manager Equity Plan (the “Manager Equity Plan” and collectively the “Equity Incentive Plans”). For further details, see Note 12 to the consolidated financial statements included under Item 8 in this Form 10-K.

The following table presents certain information about the Equity Incentive Plans as of December 31, 2014:

Award	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans
Restricted common stock . . . . .	N/A	N/A	761,511
Total . . . . .	—	—	761,511

**Stockholder Return Performance**

The following graph is a comparison of the cumulative total stockholder return on the Company’s common stock, the Standard & Poor’s 500 Index (the “S&P 500 Index”), the Russell 2000 Index (the “Russell 2000”) and the SNL Finance REIT Index (the “SNL Finance REIT”), a peer group index from May 9, 2012 (commencement of trading on the New York Stock Exchange) to December 31, 2014, and accordingly does not take into account the dividend the Company declared on December 18, 2014 and paid on January 27, 2015. The graph assumes that \$100 was invested on May 15, 2012 in the Company’s common stock, the S&P 500 Index, the Russell 2000 and the SNL Finance REIT and that all dividends were reinvested without the payment of any commissions. There can be no assurance that the performance of the Company’s shares will continue in line with the same or similar trends depicted in the graph below.

Index	Period Ending						
	05/09/12	06/30/12	12/31/12	06/30/13	12/31/13	06/30/14	12/31/14
Western Asset Mortgage Capital Corp.	100.00	97.45	110.31	106.75	111.72	116.21	132.45
S&P 500	100.00	100.92	106.92	121.70	141.55	151.65	160.93
Russell 2000	100.00	101.49	108.80	126.05	151.04	155.85	158.43
SNL Finance REIT	100.00	104.28	106.04	103.48	102.42	118.48	117.29

**Recent Sales of Unregistered Securities: Use of Proceeds from Registered Securities**

Not applicable.

**Repurchase of Equity Securities**

On July 31, 2014, the Board of Directors of the Company approved the repurchase of up to 2,050,000 shares of its common stock through December 31, 2015, either in the open market or through privately-negotiated transactions. The Company made no share repurchases in 2014.

## ITEM 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

The following discussion should be read in conjunction with our financial statements and accompanying notes included in Item 8, “Financial Statements and Supplementary Data” of this annual report on Form 10-K.

### Overview

We are organized as a Delaware corporation. We operate and elected to be taxed as a REIT, commencing with our taxable year ended December 31, 2012. We generally will not be subject to U.S. federal income taxes on our taxable income to the extent that we annually, in accordance with the REIT regulations, distribute all of our net taxable income to stockholders and maintain our intended qualification as a REIT. We also intend to operate our business in a manner that will permit us to maintain our exemption from registration under the 1940 Act.

Our consolidated financial statements include our accounts, those of our wholly owned taxable REIT subsidiary or “TRS” and a trust that meets the definition of a variable interest entity (“VIE”) related to the acquisition of residential whole-loans in which we are the primary beneficiary. The trust has issued trust certificates to us which are collateralized by pools of residential mortgage loans held by the trust. We include the underlying residential whole-loans owned by the trust in Residential whole-loans at fair value on our Consolidated Balance Sheets and have eliminated the trust certificates in consolidation.

We are externally managed and advised by our Manager, an SEC-registered investment advisor and a wholly-owned subsidiary of Legg Mason, Inc. Our Manager is responsible for administering our business activities and our day-to-day operations, subject to the supervision of our Board of Directors.

On April 3, 2014, we entered into a binding agreement with a group of underwriters to sell an incremental 13.0 million shares of our common stock, which closed on April 9, 2014. The agreement provided the underwriters with the right to purchase an additional 1.95 million shares (15% of 13.0 million) during the succeeding thirty (30) days. The shares were offered to the market at a price of \$14.85 per share and the underwriters exercised a portion of their option and purchased an incremental 1.0 million shares on May 2, 2014, which closed on May 7, 2014. We received net proceeds of approximately \$205.4 million after subtracting underwriting commissions and offering expenses of approximately \$2.9 million. On April 3, 2014, we also entered into an agreement to sell 650,000 shares of our common stock, for \$14.85 per share, to our Manager in a private placement for an aggregate offering price of approximately \$9.7 million, which closed on April 9, 2014.

We have invested the proceeds of our IPO, concurrent private placements and follow-on public offerings in Agency RMBS, including Mortgage pass-through certificates, Agency derivatives, Agency Interest-Only Strips, and Agency CMOs, Non-Agency RMBS as well as Agency and Non-Agency CMBS, Non U.S. CMBS, ABS and residential whole-loans. We have also used “to-be-announced” forward contracts, or TBAs, in order to invest in Agency RMBS. Pursuant to these TBAs, we agree to purchase (or deliver), for future settlement, Agency RMBS with certain principal and interest terms. At December 31, 2014, our portfolio was comprised of approximately \$3.2 billion of Agency RMBS (including approximately \$257.6 million of Agency Interest-Only Strips), approximately \$671.0 million of Non-Agency RMBS (including approximately \$74.1 million of Non-Agency Interest-Only Strips), approximately \$44.2 million Agency CMBS ((including approximately \$18.8 million of Agency CMBS Interest-Only Strips), approximately \$393.8 million Non-Agency CMBS, approximately \$108.9 million of other securities and approximately \$7.2 million of residential whole-loans, exclusive of linked transactions. In addition, at December 31, 2014, our linked transactions included approximately \$8.2 million of Non-Agency RMBS, approximately \$38.6 million of Non-Agency CMBS (including Non U.S. CMBS) and approximately \$5.7 million of other securities.

We use leverage, currently comprised of borrowings under repurchase agreements, as part of our business strategy in order to increase potential returns to stockholders. We accomplish this by borrowing against existing MBS and other securities through repurchase agreements. There are no limits on the maximum amount of leverage that we may use, and we are not required to maintain any particular debt-to-equity leverage ratio under our charter. We may also change our financing strategy and leverage without the consent of stockholders.

As of December 31, 2014, we had entered into master repurchase agreements with 24 counterparties. As of December 31, 2014, we had approximately \$3.9 billion of borrowings, including borrowings on linked transactions, outstanding under our repurchase agreements collateralized by approximately \$4.4 billion of MBS and other securities. The balance outstanding at December 31, 2014 includes approximately \$31.9 million related to linked transactions collateralized by approximately \$52.5 million of MBS and other securities and \$4.9 million of borrowings related to residential whole-loans owned through trust certificates which are eliminated upon consolidation of approximately \$7.2 million. We have entered into swaps to effectively fix the interest rate of our borrowings (for the life of the swap); net of variable-rate payment swaps, of approximately \$1.4 billion, under our repurchase agreements, excluding forward starting swaps of \$2.2 billion. In addition, as of year-end, we also owned swaptions on approximately an incremental \$105.0 million of borrowings. As of December 31, 2014, our aggregate debt-to-equity ratio was approximately 6.3 to 1, including repurchase agreements on linked transactions and 6.2 to 1, excluding repurchase agreements on linked transactions.

#### **Recent Market Conditions and Strategy**

Our business is affected by general U.S. residential real estate fundamentals, domestic and foreign commercial real estate fundamentals and the overall U.S. and international economic environment. In particular, our strategy is influenced by the specific characteristics of these markets, including but not limited to prepayment rates and interest rate levels. We expect the results of our operations to be affected by various factors, many of which are beyond our control. Our results of operations will primarily depend on, among other things, the level of our net interest income, the market value of our investment portfolio and the supply of and demand for mortgage-related securities. Our net interest income, which includes the amortization of purchase premiums and accretion of discounts, will vary primarily as a result of changes in interest rates, defaults and severity rates, borrowing costs, and prepayment speeds on our MBS and Target Asset investments. Similarly, the overall value of our investment portfolio will be impacted by these factors as well as changes in the value of residential and commercial real estate and continuing regulatory changes. Over the course of 2014, we have shifted our portfolio to more credit sensitive securities from Agency securities, which we believe given the current economic and interest rate environment will provide a better risk adjusted return.

The current economic and market outlook are shaped in a significant manner by the unprecedented level of fiscal and monetary stimulus that the U.S. Government and U.S. Federal Reserve Board provided in the aftermath of the 2007-2010 financial crisis. The current rate environment is characterized by a flattening yield curve. The U.S. Federal Reserve Board has maintained a near-zero target for the federal funds rate, and has reiterated its commitment to fulfilling its mandate to promote higher growth and lower unemployment and to maintain price stability in the U.S. economy. On January 28, 2015, the U.S. Federal Reserve Board reaffirmed its view that, at the present time, a highly accommodative stance of monetary policy remains appropriate.

Notwithstanding economic data which suggests continuing improvement in the overall U.S. economy and labor market and the completion by the Federal Reserve of its open market security purchases in October 2014, it is our Manager's view that the significant mortgage debt burden, run-off of fiscal stimulus and budget discipline at both the U.S. federal and state level, the strengthening of the U.S. dollar and general economic weakness in Europe will serve as an impediment to real GDP growth throughout 2015. Real gross domestic product ("GDP") was down sharply in the first quarter of 2014, rebounded substantially in the second and third quarters of 2014, but fell-off in the fourth quarter of 2014. Accordingly, we believe core interest rates will be range bound with slow inflation. For these reasons, and considering its dual mandate to manage both inflation and unemployment, we believe that the U.S. Federal Reserve Board will continue its accommodative monetary policy now in effect. In the press release issued at the conclusion of the Federal Open Market Committee meeting on January 28, 2015, the Federal Reserve stated that in order to support progress toward maximum employment and price stability, the current 0% to 0.25% target range for the federal funds rate remains appropriate. The Federal Reserve went on to say that based on its current assessment of economic conditions, it could be patient in beginning to normalize the stance of monetary policy and even after employment and inflation are near mandate consistent levels, economic conditions may warrant keeping the target federal funds rate below levels considered normal in the longer run. Nevertheless, to the extent the economy improves more quickly, the Federal Reserve would increase the target range for the federal funds rate more quickly and if economic progress is slower than expected, then increases in the target range for the federal funds rate will likely occur later.

As the capital markets have recovered, commercial banks have re-entered the secured lending market, which has quickened the pace of asset recovery, and the return to more normalized credit spreads. Given the current regulatory environment, we continue to see significant non-bank entities filling the void for residential and commercial real estate credit lending. Due to this shift, liquidity in all risk assets has increased. Financing of Agency and Non-Agency RMBS, Agency and Non-Agency CMBS as well as ABS is currently widely available through, among other vehicles, repurchase agreements. Haircuts, or the discount attributed to the value of securities sold under repurchase agreements, range from a low of 3.0% to a high of 5.0% for Agency RMBS, depending on the specific security used as collateral for such repurchase agreements, while haircuts for Agency IOs and IIOs can range from a low of 20% to a high of 25% and haircuts for Non-Agency RMBS and Agency and Non-Agency CMBS range from a low of 13.0% to a high of 60.0% and haircuts for other securities range from a low of 20.0% to a high of 55.0%. Notwithstanding the foregoing, such financing may not be as readily available and at attractive pricing in the future as a result of the increased regulatory capital requirements under the Dodd-Frank Act and Basel III.

In response to the financial crisis, the U.S. government, through the FHA, the Federal Deposit Insurance Corporation, or FDIC, and the U.S. Treasury, has commenced or proposed implementation of programs designed to provide homeowners with assistance in avoiding residential mortgage loan foreclosures. These loan modification and refinance programs, future U.S. federal, state and/or local legislative or regulatory actions that result in the modification of outstanding mortgage loans, as well as changes in the requirements necessary to qualify for refinancing mortgage loans with FNMA, FHLMC or GNMA, may adversely affect the value of, and the returns on, residential mortgage loans, RMBS, real estate-related securities and various other asset classes in which we may invest. In addition to the foregoing, the U.S. Congress and/or various states and local legislators may enact additional legislation or regulatory action, such as the recently enacted qualifying mortgage requirements under the Dodd-Frank Act, to address the current economic crisis or for other purposes that could have a material adverse effect on lending in general and our ability to execute our business strategies. In particular, we believe that while the recently enacted qualifying mortgage requirements under the Dodd-Frank Act may present an opportunity to acquire and securitize certain "non-qualifying" or Non-QM mortgages, it is likely to reduce the overall production of new mortgages, thereby negatively impacting the general supply of RMBS.

On January 4, 2012, the U.S. Federal Reserve Board released a report titled “*The U.S. Housing Market: Current Conditions and Policy Considerations*” to Congress providing a framework for thinking about certain issues and tradeoffs that policy makers might consider. In March 2014, Senate Banking Committee Chairman Tim Johnson and Ranking Member Mike Crapo announced an agreement on their own version of GSE reform which would eventually replace FNMA and FHLMC with a new system. It is unclear how future legislation may impact the housing finance market and the investing environment for agency securities as the method of reform is undecided and has not yet been defined by the regulators.

#### **Critical Accounting Policies**

The consolidated financial statements include our accounts, those of our consolidated subsidiary, our wholly owned taxable REIT subsidiary or “TRS” and a variable interest entity (“VIE”) related to the acquisition of residential whole-loans in which we are the primary beneficiary. All intercompany amounts have been eliminated in consolidation. In accordance with GAAP, our consolidated financial statements require the use of estimates and assumptions that involve the exercise of judgment and use of assumptions as to future uncertainties. In accordance with SEC guidance, the following discussion addresses the accounting policies that we currently apply. Our most critical accounting policies will involve decisions and assessments that could affect our reported assets and liabilities, as well as our reported revenues and expenses. We believe that all of the decisions and assessments upon which our consolidated financial statements have been based were reasonable at the time made and based upon information available to us at that time. We have identified what we believe will be our most critical accounting policies to be the following:

##### **Investments**

We elected the fair value option for all of our MBS, other securities and whole-loans at the date of purchase, which permits us to measure these securities at fair value with the change in fair value included as a component of earnings. Although we have elected the fair value option for our MBS, other securities and whole-loans, we separately compute interest income on our MBS, other securities and whole-loans under the prescribed method based on the nature of the investment. As such, premiums and discounts are amortized or accreted into interest income and are included in Interest income in the Consolidated Statements of Operations.

##### **Valuation of financial instruments**

We disclose the fair value of our financial instruments according to a fair value hierarchy (Levels I, II, and III, as defined below). In accordance with GAAP, we are required to provide enhanced disclosures regarding instruments in the Level III category (which require significant management judgment), including a separate reconciliation of the beginning and ending balances for each major category of assets and liabilities. GAAP establishes a framework for measuring fair value in accordance with GAAP and expands financial statement disclosure requirements for fair value measurements. GAAP further specifies a hierarchy of valuation techniques, which is based on whether the inputs into the valuation technique are observable or unobservable. The hierarchy is as follows:

Level I—Quoted prices in active markets for identical assets or liabilities.

Level II—Quoted prices for similar assets and liabilities in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose inputs are observable or whose significant value drivers are observable.

Level III—Prices are determined using significant unobservable inputs. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an investment at the end of the period), unobservable inputs may be used.

The level in the fair value hierarchy within which a fair measurement in its entirety falls is based on the lowest level input that is significant to the fair value measurement in its entirety.

When available, we use quoted market prices to determine the fair value of an asset or liability. If quoted market prices are not available, we consult with independent pricing services or obtain third party broker quotes. If independent pricing service, or third party broker quotes are not available, we determine the fair value of the securities using valuation techniques that use, when possible, current market-based or independently-sourced market parameters, such as interest rates.

While linked transactions are treated as derivatives for GAAP, the securities underlying the Company’s linked transactions are valued using similar techniques to those used for our securities portfolio. The value of the underlying security is then netted against the carrying amount (which approximates fair value) of the repurchase agreement at the valuation date. Additionally, TBA instruments are similar in substance to our Agency RMBS portfolio, and the Company therefore estimates fair value based on similar methods.

We determine the fair value of derivative financial instruments by obtaining quotes from a third party pricing service, whose pricing is subject to review by our Manager’s pricing committee. In valuing our interest rate derivatives, such as swaps and swaptions, we consider the creditworthiness of our counterparties, along with collateral provisions contained in each derivative agreement, from the perspective of both us and our counterparties. All of our interest rate swaps are either cleared through a central clearing house and subject to the clearing house margin requirements or subject to bilateral collateral arrangements with the vast majority of interest rate swaps entered into beginning in September 2013 being cleared through a central clearing house. We also have netting arrangements in place with all derivative counterparties pursuant to standard documentation developed by the International Swap and Derivatives Association. Consequently, no credit valuation adjustment was made in determining the fair value of interest rate derivatives.

Valuation techniques for MBS, whole-loans and other structured securities may be based upon models that consider the estimated cash flows of the security. Depending on the security and the underlying collateral, the primary inputs to the model include yields for to-be-announced (also known as TBAs) Agency RMBS, the U.S. Treasury market and floating rate indices such as LIBOR, the Constant Maturity Treasury rate and the prime rate as a benchmark yield. In addition, the model may incorporate the current weighted average maturity and additional pool level information such as prepayment speeds, default frequencies and default severities, if applicable. To the extent, the inputs are observable and timely, the securities are categorized in Level II of the fair value hierarchy; otherwise, unless alternative pricing information as described is available, they are categorized as Level III.

Fair value under GAAP represents an exit price in the normal course of business, not a forced liquidation price. If we are forced to sell assets in a short period to meet liquidity needs, the prices we receive could be substantially less than the recorded fair values of our assets. Furthermore, the analysis of whether it is more likely than not that we will be required to sell securities in an unrealized loss position prior to an expected recovery in value (if any), the amount of such expected required sales, and the projected identification of which securities will be sold is also subject to significant judgment, particularly in times of market illiquidity.

We will review any changes to the valuation methodology to ensure the changes are appropriate. The methods used may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while we anticipate that our valuation methods will be appropriate and consistent with other market participants, the use of different methodologies, or assumptions, to determine the fair value of certain financial instruments can result in a different estimate of fair value at the reporting date. We use inputs that are current as of the measurement date, which may include periods of market dislocation, during which price transparency may be reduced.

All valuations received from independent pricing services are non-binding. We primarily utilize an independent third party pricing service as the primary source for valuing the Company's assets.

We generally receive one independent pricing service price for each investment in our portfolio. Our Manager has established a process to review and validate the pricing received from the independent pricing service and has a process for challenging prices received from the independent pricing service when necessary. The Company utilizes our Manager's policies in this regard. Our and our Manager's review of the independent third party pricing data may consist of a review of the daily change in the prices provided by the independent pricing vendor which exceed established tolerances or comparisons to executed transaction prices. Our Manager's pricing group, which functions independently from its portfolio management personnel, corroborates the price differences or changes in price by comparing the vendor price to alternate sources including other independent pricing services or broker quotations. If the price change or difference cannot be corroborated, the Manager's pricing group consults with the portfolio management team for market color in reviewing such pricing data as warranted. To the extent that our Manager has information, typically in the form of broker quotations that would indicate that a price received from the independent pricing service is outside of a tolerance range, our Manager generally challenges the independent pricing service price.

To ensure proper fair value hierarchy, we and our Manager review the methodology used by the third party pricing service to understand whether observable market data is being utilized in the vendor's pricing methodology. Generally, this review is conducted annually, however ad-hoc reviews of the pricing methodology and the data do occur. The review of the assumptive data received from the vendor includes comparing key inputs. In addition, as part of our regular review of pricing, our Manager's pricing group may have informal discussions with the independent pricing vendor regarding their evaluation methodology or the market data utilized in their determination as well as performing back testing with regard to the sale of certain securities. The conclusion that a price should be overridden in accordance with our Manager's pricing methodology may impact the fair value hierarchy of the security for which such price has been adjusted.

#### **Linked transactions**

In instances where we finance the acquisition of securities through repurchase agreements with the same counterparty from which the securities were purchased, we evaluate such transactions in accordance with GAAP. This guidance requires the initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another to be considered linked unless all of the criteria found in the guidance are met at the inception of the transaction. If the transaction meets all of the conditions, the initial transfer shall be accounted for separately from the repurchase financing, and we will record the securities and the related financing on a gross basis on our Consolidated Balance Sheets with the corresponding interest income and interest expense in our Consolidated Statements of Operations. If the transaction is determined to be linked, we will record the initial transfer and repurchase financing on a net basis and record a forward commitment to purchase securities as a derivative instrument with changes in market value being recorded on our Consolidated Statements of Operations. Such forward commitments are recorded at fair value with subsequent changes in fair value recognized in Gain (loss) on linked transactions, net on our Consolidated Statements of Operations. We refer to these transactions as Linked Transactions. When or if a transaction is no longer considered to be linked, the security and related repurchase financing will be reported on a gross basis. The unlinking of a transaction causes a realized event in which the fair value of the security as of the date of unlinking will become the cost basis of the security. The difference between the fair value on the unlinking date and the existing cost basis of the security will be the realized gain or loss. Recognition of effective yield for such security will be calculated prospectively using the new cost basis. For linked transactions, we reflect purchases and sales of securities within the investing section of our Consolidated Statements of Cash Flows. Proceeds from repurchase agreements borrowings and repayments of repurchase agreement borrowings are reflected in the financing section of our Consolidated Statements of Cash Flows.

The securities underlying our linked transactions are valued using similar techniques to those used for our securities portfolio.

Starting in 2015, GAAP will no longer require us to segregate and treat linked transactions as derivatives. Accordingly, we will report such securities and the corresponding repurchase agreement on a gross basis on our Consolidated Balance Sheets and with the corresponding interest income and interest expense reported in our Consolidated Statements of Operations. See "Recent accounting pronouncements" for details.

#### **Interest income recognition and Impairment**

*Agency MBS and Non-Agency MBS, excluding Interest-Only Strips, and other securities rated AA and higher at the time of purchase*

Interest income on mortgage-backed securities and other securities is accrued based on the respective outstanding principal balances and their corresponding contractual terms. Premiums and discounts associated with Agency MBS and Non-Agency MBS, excluding Interest-Only Strips, and other securities rated AA and higher at the time of purchase are amortized into interest income over the estimated life of such securities using the effective yield method. Adjustments to premium and discount amortization are made for actual prepayment activity. On at least a quarterly basis, we estimate prepayments for our securities and, as a result, if prepayments increase (or are expected to increase), we will accelerate the rate of amortization (accretion) on premiums or discounts and make a retrospective adjustment to historical amortization (accretion). Alternatively, if prepayments decrease (or are expected to decrease) we will reduce the rate of amortization (accretion) on the premiums or discounts and make a retrospective adjustment to historical amortization.

Our conversion to a new accounting system in the calculation methodology used to determine the amortization of bond premium on our Agency MBS portfolio as of April 1, 2014, resulted in a change in estimate of approximately \$1.2 million. The impact of this change of estimate was limited to an increase of \$0.03 per share in core earnings (a non-GAAP measure). For financial reporting purposes, the impact of the change in estimate had no impact on Net income and was limited to an increase of approximately \$1.2 million to Interest Income and an equal offsetting reduction to Unrealized gain (loss) on Mortgage-backed securities, other securities and whole-loans, net on the Consolidated Statements of Operations. We do not believe the aforementioned change in estimate will have a material impact to subsequent periods.

A decline in the fair market value of our assets may require us to recognize an “other-than-temporary” impairment against such assets under GAAP unless we were to determine that, with respect to any assets in unrealized loss positions, we do not have the intent to sell these investments, it is more likely than not that we will not be required to sell the investment before recovery of a security’s amortized cost basis and we will not be required to sell the security for regulatory or other reasons. In addition, an other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the security is less than its carrying amount. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a “market participant” would use and are discounted at a rate equal to the current yield used to accrete interest income. If such a determination is made, we would recognize unrealized losses through earnings and write down the amortized cost of such assets to a new cost basis, based on the fair value of such assets on the date they are considered to be other-than-temporarily impaired. Other than for “plain-vanilla” variable rate Non-Agency MBS, we do not bifurcate the loss between credit loss and loss attributed to change in interest rates, therefore, the entire loss is recorded as other-than-temporary. Such impairment charges reflect non-cash losses at the time of recognition; subsequent disposition or sale of such assets can further affect our future losses or gains, as they are based on the difference between the sales price received and adjusted amortized cost of such assets at the time of sale.

The determination of whether an other-than-temporary impairment exists is subject to management’s estimates based on consideration of both factual information available at the time of assessment as well as our estimates of the future performance and projected amount and timing of cash flows expected to be collected on the security. As a result, the timing and amount of an other-than-temporary impairment constitutes an accounting estimate that may change materially over time.

*Non-Agency MBS and other securities that are rated below AA at the time of purchase and Interest-Only Strips that are not classified as derivatives*

Interest income on Non-Agency MBS and other securities that are rated below AA at the time of purchase and Interest-Only Strips that are not classified as derivatives, are recognized based on the effective yield method. The effective yield on these securities is based on the projected cash flows from each security, which is estimated based on our observation of the then current market information and events and will include assumptions related to interest rates, prepayment rates and the timing and amount of credit losses. On at least a quarterly basis, we review and, if appropriate, make adjustments to our cash flow projections based on input and analysis received from external sources, internal models, and our judgment about interest rates, prepayment rates, the timing and amount of credit losses (if applicable), and other factors. Where appropriate, we may include in our cash flow projections the U.S Department of Justice’s settlements with the major residential mortgage originators, regarding certain lending practices. Changes in cash flows from those originally projected, or from those estimated at the last evaluation, may result in a prospective change in the yield/interest income recognized on such securities. Actual maturities of the securities are affected by the contractual lives of the associated mortgage collateral, or mortgages, periodic payments of scheduled principal, and prepayments of principal. Therefore, actual maturities of the securities will generally be shorter than stated contractual maturities.

Based on the projected cash flows from any Non-Agency MBS and other structured security, which we may purchase at a discount to par value, a portion of the purchase discount may be designated as credit protection against future credit losses and, therefore, not accreted into interest income. The amount designated as credit discount may be adjusted over time, based on the actual performance of the security, its underlying collateral, actual and projected cash flow from such collateral, economic conditions and other factors. If the performance of a security with a credit discount is more favorable than forecasted, a portion of the amount designated as credit discount may be accreted into interest income prospectively.

In addition, an other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the beneficial interest is less than its carrying amount. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a “market participant” would use and are discounted at a rate equal to the current yield used to accrete interest income. The Company does not bifurcate the loss between credit loss and loss attributed to change in interest rates, therefore, the entire loss is recorded as other-than-temporary. These adjustments are reflected in our Consolidated Statements of Operations as Other loss on Mortgage-backed securities and other securities.

Securities denominated in a foreign currency contain additional risk in that the amortized cost basis for those securities may not be recovered due to declines in currency exchange rates. We consider the length of time that the security’s fair value has declined due to the decline in foreign exchange rates, when assessing other-than temporary impairment. We entered into foreign currency swaps and forwards in order to hedge our exposure to changes in foreign currency exchange rates.

Following the recognition of an other-than-temporary impairment, a new amortized cost basis is established for the security. However, to the extent that there are subsequent increases in cash flows expected to be collected, the other-than-temporary impairment previously recorded may be accreted back through interest income via increased yield.

The determination of whether an other-than-temporary impairment exists is subject to management’s estimates based on consideration of both factual information available at the time of assessment as well as our estimates of the future performance and projected amount and timing of cash flows expected to be collected on the security. As a result, the timing and amount of an other-than-temporary impairment constitutes an accounting estimate that may change materially over time.

### *Residential whole-loans*

We record our purchases of residential whole-loans as the amount paid to the seller plus any fees paid or less any fees received. All other costs incurred in connection with acquiring purchased residential whole-loans or committing to purchased residential whole-loans are charged to expense as incurred. We amortize or accrete any premium or discount over the life of the related loan utilizing the effective interest method, using the contractual payments terms of the loans. On at least a quarterly basis, we evaluate the collectability of both interest and principal of each loan, if circumstances warrant, to determine whether they are impaired. A loan is impaired when, based on current information and events, it is probable that we will be unable to collect all amounts due according to the existing contractual terms. When a loan is impaired, we do not record a loss accrual as we have elected the fair value option. However, income recognition is suspended for loans at the earlier of the date at which payments become 90-days past due or when, in the opinion of management, a full recovery of income and principal becomes doubtful. When the ultimate collectability of the principal of an impaired loan is in doubt, all payments are applied to principal under the cost recovery method. When the ultimate collectability of the principal of an impaired loan is not in doubt, contractual interest is recorded as interest income when received, under the cash basis method until an accrual is resumed when the loan becomes contractually current and performance is demonstrated to be resumed. A loan is written off when it is no longer realizable and/or legally discharged.

### **Foreign currency transactions**

We have and expect to continue to enter into transactions denominated in foreign currency from time to time. At the date the transaction is recognized, the asset and/or liability will be measured and recorded using the exchange rate in effect at the date of the transaction. At each balance sheet date, such foreign currency assets and liabilities are re-measured using the exchange rate in effect at the date of the balance sheet, resulting in unrealized foreign currency gains or losses. Unrealized foreign currency gains or losses on MBS and other securities are recorded in Unrealized gain (loss) on Mortgage-backed securities, other securities and whole-loans, net on the Consolidated Statements of Operations. In addition, we evaluate whether an other-than-temporary impairment is deemed to have occurred on MBS and other securities denominated in a foreign currency. Cash flows from MBS and other securities denominated in foreign currencies are received in a foreign currency, and as a result, we may incur a loss due to changes in foreign exchange rates even when all contractual cash flows are received. These adjustments are reflected in our Consolidated Statements of Operations as Other loss on Mortgage-backed securities and other securities. Unrealized and realized foreign currency gains or losses on borrowings under repurchase agreements are recorded in Interest income on cash balances and other income (loss), net on the Consolidated Statements of Operations. Interest income from investments denominated in a foreign currency and interest expense on borrowings denominated in a foreign currency are recorded at the average rate of exchange during the period.

### **Variable Interest Entities (“VIEs”)**

VIEs are defined as entities in which equity investors either do not have sufficient equity at risk for the entity to finance its activities without additional subordinated financial support, are unable to direct the entity’s activities or are not exposed to the entity’s losses or entitled to its residual returns. VIEs are required to be consolidated by their primary beneficiary. The primary beneficiary of a VIE is determined to be the party that has both the power to direct the activities of a VIE that most significantly impact the VIE’s economic performance and the obligation to absorb losses of the VIE that could potentially be significant to the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE. This determination of the requirement to consolidate a VIE and the requirement to disclose information about our involvement in a VIE can sometimes involve complex and subjective analyses. Ongoing assessments of whether an enterprise is the primary beneficiary of a VIE is required.

### **Due from counterparties/Due to counterparties**

Due from counterparties represents cash posted by us with our counterparties as collateral for our interest rate and/or currency derivative financial instruments, repurchase agreements, and TBAs. Due to counterparties represents cash posted with us by our counterparties as collateral under our interest rate and/or currency derivative financial instruments, repurchase agreements, and TBAs. In addition, as provided below, Due to counterparties may include non-cash collateral in which we have the obligation to return the collateral upon us either selling or pledging the non-cash collateral. To the extent we receive collateral other than cash from our counterparties such assets are not included in our Consolidated Balance Sheets. Notwithstanding the foregoing, if we either rehypothecate such assets or pledge the assets as collateral pursuant to a repurchase agreement, the cash received and the corresponding liability is reflected on our Consolidated Balance Sheets.

### **Derivatives and hedging activities**

Subject to maintaining our qualification as a REIT for U.S. federal income tax purposes, we utilize derivative financial instruments to hedge the interest rate risk associated with our borrowings and the currency risk associated with our non U.S. dollar denominated investments. Derivatives, subject to the REIT requirements, are used for hedging purposes including overall market risk. We determine their fair value and obtain quotations from a third party to facilitate the process of determining such fair values. If our hedging activities do not achieve the desired results, reported earnings may be adversely affected.

GAAP requires an entity to recognize all derivatives as either assets or liabilities on the Consolidated Balance Sheets and to measure those instruments at fair value. If the reporting entity does not elect hedge accounting for a derivative instrument, fair value adjustments are recorded in earnings immediately.

We elected not to apply hedge accounting for our derivative instruments and, accordingly record the change in fair value and net interest rate swap payments (including accrued amounts) related to interest rate swaps in Gain (loss) on derivative instruments, net in our Consolidated Statements of Operations. Similarly, the change in fair value and net currency payment (including accrued amounts) related to our currency hedges will also be included in Gain (loss) on derivative instruments net in our Consolidated Statements of Operations. In our Consolidated Statements of Cash Flows, premiums received and paid on termination of our interest rate swaps, excluding interest rate swaps containing an other-than-insignificant financing element and the unamortized premium of market agreed coupon (“MAC”) interest rate swaps, are included in cash flows from operating activities. On the other hand, proceeds and payments on settlement of swaptions, mortgage put options, futures contracts and TBAs are included in cash flows from investing activities. Proceeds and payments on settlement of forward contracts are reflected in cash flows from financing activities in our Consolidated Statement of Cash Flows. While payments made at the time of entering MAC interest rate swaps are included in cash flows from investing activities, payments received by us upon entering MAC interest rate swaps are included in either cash flows from investing activities or cash flows financing activities, depending on whether or not the derivative instrument includes an other-than-insignificant financing element. For MAC interest rate swaps containing an other-than-insignificant financing element, all cash flows over the life of the derivative are treated as cash flows from financing activities. Return and recovery of basis activity for MAC interest rate swaps is included in cash flows from investing activities for swaps not containing an other-than-insignificant financing element in our Consolidated Statement of Cash Flows. For Agency and Non-Agency Interest-Only Strips accounted for as derivatives, the purchase, sale and recovery of basis activity is included with MBS and other securities under cash flows from investing activities in our Consolidated Statement of Cash Flows.

We also invest in Agency and Non-Agency Interest-Only Strips, swaptions, mortgage put options, futures contracts and TBAs. We evaluate the terms and conditions of our holdings of Agency and Non-Agency Interest-Only Strips, swaptions mortgage put options, futures contracts and TBAs to determine if these instruments have the characteristics of an investment or should be considered a derivative under GAAP. In determining the classification of our holdings of Interest-Only Strips, we evaluate the securities to determine if the nature of the cash flows has been altered from that of the underlying mortgage collateral. Generally, a security which represents a strip off of a mortgage pass through security will be considered a hybrid instrument classified as a MBS investment on our Consolidated Balance Sheets utilizing the fair value option. Alternatively, Interest-Only Strips, for which the underlying mortgage collateral has been included into a structured security that alters the cash flows from the underlying mortgage collateral, are accounted for as derivatives at fair value. Accordingly, Agency and Non-Agency Interest-Only Strips, swaptions, mortgage put options, futures contracts and TBAs having the characteristics of derivatives are accounted for at fair value with such changes recognized in Gain (loss) on derivative instruments, net in our Consolidated Statements of Operations, along with any interest earned (including accrued amounts). The carrying value of the Agency and Non-Agency Interest-Only Strips, accounted for as derivatives, is included in Mortgage-backed securities on the Consolidated Balance Sheets. The carrying value of interest rate swaptions, mortgage put options, currency forwards, futures contracts and TBAs is included in Derivative assets or Derivative liabilities on the Consolidated Balance Sheets.

We evaluate all of our financial instruments to determine if such instruments are derivatives or contain features that qualify as embedded derivatives. An embedded derivative is separated from the host contract and accounted for separately when all of the guidance criteria are met. Hybrid instruments that are remeasured at fair value through earnings, including the fair value option, are not bifurcated. Our derivative instruments also include linked transactions, which reflect a forward commitment to purchase assets. Derivative instruments are recorded at fair value and are re-valued at each reporting date, with changes in the fair value together with interest earned (including accrued amounts) reported in Gain (loss) on derivative instruments, net in our Consolidated Statements of Operations. While accounted for as derivative instruments, linked transactions, including changes in fair value and interest earned (including accrued amounts) are reported separately in our Consolidated Balance Sheets, Consolidated Statements of Operations and Consolidated Statements of Cash Flows.

#### **Repurchase agreements**

Mortgage-backed securities and other securities sold under repurchase agreements are treated as collateralized financing transactions, unless they meet sales treatment. Securities financed through a repurchase agreement remain on our Balance Sheet as an asset and the amount of cash received from the lender is recorded in our Consolidated Balance Sheets as a liability. Interest payable in accordance with repurchase agreements is recorded as accrued interest payable on the Consolidated Balance Sheets. Interest paid in accordance with repurchase agreements is recorded as interest expense.

In instances where we pledge securities through repurchase agreements with the same counterparty from which the securities are purchased, we will account for the purchase commitment and repurchase agreement on a net basis and record a forward commitment to purchase securities as a derivative instrument if the transaction does not comply with the criteria for gross presentation. Such forward commitments will be recorded at fair value with subsequent changes in fair value recognized in income. If the transaction complies with the criteria for gross presentation, we will record the assets and the related financing on a gross basis in our Consolidated Balance Sheets and the corresponding interest income and interest expense in our Consolidated Statements of Operations. Starting in 2015, we will no longer be required to treat such assets as linked transactions and will report the security and corresponding repurchase financing on a gross basis, see "Recent accounting pronouncements" for details.

#### **Share-based compensation**

We account for share-based compensation to our independent directors, to our officers and employees, to our Manager and to employees of our Manager and its affiliates using the fair value based methodology prescribed by GAAP. Compensation cost related to restricted common stock issued to our independent directors and employees is measured at its fair value at the grant date, and amortized into expense over the service period on a straight-line basis. Compensation cost related to restricted common stock issued to our Manager and to employees of our Manager and its affiliates is initially measured at fair value at the grant date, and re-measured at fair value on subsequent dates to the extent the awards are unvested and the change in fair value is reported in the Consolidated Statements of Operations as non-cash stock based compensation.

#### **Warrants**

We account for the warrants comprising a part of the units issued in the private placement to certain institutional accredited investors concurrent with our IPO in accordance with Accounting Standards Codification 815, Accounting for Derivative Instruments and Hedging Activities, which provides guidance on the specific accounting treatment of a multitude of derivative instruments. We have evaluated the warrants issued by us and have recorded the warrants at their relative fair value as a component of equity, using a variation of the adjusted Black-Scholes option valuation model at their time of issuance.

#### **Income taxes**

We operate and have elected to be taxed as a REIT commencing with our taxable year ended December 31, 2012. Accordingly, we will generally not be subject to corporate U.S. federal or state income tax to the extent that we make qualifying distributions to our stockholders, and provided that we satisfy on a continuing basis, through actual investment and operating results, the REIT requirements including certain asset, income, distribution and stock ownership tests. If we fail to qualify as a REIT, and do not qualify for certain statutory relief provisions, we will be subject to U.S. federal, state and local income taxes and may be precluded from qualifying as a REIT for the subsequent four taxable years following the year in which we lost our REIT qualification. Accordingly, our failure to qualify as a REIT could have a material adverse impact on our results of operations and amounts available for distribution to our stockholders.

Our dividends paid deduction for qualifying dividends paid to our stockholders is computed using our taxable income calculated in accordance with the REIT requirements as opposed to net income reported on the consolidated financial statements. Taxable income, generally, will differ from net income reported on the consolidated financial statements because the determination of taxable income is based on tax provisions and not financial accounting principles.

We may elect to treat certain of our subsidiaries as TRSs. In general, a TRS of ours may hold assets and engage in activities that we cannot hold or engage in directly and generally may engage in any real estate or non-real estate-related business. A TRS is subject to U.S. federal, state and local corporate income taxes. While a TRS will generate net income, a TRS can declare dividends to us, which will be included in our taxable income and necessitate a distribution to our stockholders. The portion of our dividends, if any, pertaining to distributions from a TRS may be treated as qualified dividend dividends. Conversely, if we retain earnings at the TRS level, no distribution is required and we can increase book equity of the consolidated entity. As of December 31, 2014, we have a single wholly owned subsidiary which we have elected to treat as a TRS. We had a cumulative taxable loss in our TRS for the year ended December 31, 2014. As there can be no certainty that the TRS will have taxable income in the future, no tax benefit was included in our consolidated financial statements as of such date.

We evaluate uncertain tax positions, if any, and classify interest and penalties, if any, related to unrecognized tax benefits as a component of the provision for income taxes.

### **Accounting standards applicable to emerging growth companies**

The JOBS Act contains provisions that relax certain requirements for “emerging growth companies” for which we qualify. For as long as we are an emerging growth company, which may be up to five full fiscal years, unlike other public companies, we will not be required to: (i) comply with any new or revised financial accounting standards applicable to public companies until such standards are also applicable to private companies under Section 102(b)(1) of the JOBS Act; (ii) provide an auditor’s attestation report on management’s assessment of the effectiveness of our system of internal control over financial reporting pursuant to Section 404 of the Sarbanes-Oxley Act; (iii) comply with any new requirements adopted by the PCAOB requiring mandatory audit firm rotation or a supplement to the auditor’s report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer; or (iv) comply with any new audit rules adopted by the PCAOB after April 5, 2012 unless the SEC determines otherwise. We currently take advantage of some of such exemptions. Our qualification for remaining an emerging growth company under the five full fiscal years expires on December 31, 2018. However, we may no longer qualify sooner if our gross revenues for any year equal \$1.0 billion or more, we issued more than \$1.0 billion in non-convertible debt during the three previous years, or on the date in which we are deemed to be a large accelerated filer.

As noted above, under the JOBS Act, emerging growth companies can delay adopting new or revised accounting standards that have different effective dates for public and private companies until such time as those standards apply to private companies. We currently take advantage of such extended transition period. Since we are not required to comply with new or revised accounting standards on the relevant dates on which adoption of such standards is required for other public companies, our financial statements may not be comparable to the consolidated financial statements of companies that comply with public company effective dates. If we were to elect to comply with these public company effective dates, such election would be irrevocable pursuant to Section 107 of the JOBS Act.

### **Recent accounting pronouncements**

#### Accounting Standards to be Adopted in Future Periods

In April 2014, the Financial Accounting Standards Board issued updated guidance that changes the requirements for reporting discontinued operations. Under the new guidance, a discontinued operation is defined as a disposal of a component of an entity or group of components of an entity that is disposed of or is classified as held for sale and represents a strategic shift that has (or will have) a major effect on an entity’s operations and financial results. The guidance is effective prospectively as of the first quarter of 2015, with early adoption permitted for new disposals or new classifications as held-for-sale. The guidance is effective for annual periods beginning on or after December 15, 2014 and interim periods within annual periods beginning on or after December 15, 2015. Early adoption is permitted but only for disposals (or classifications as held for sale) that have not been reported in financial statements previously issued or available for issue. The new guidance is not expected to have a material impact on our consolidated financial statements.

In June 2014, the Financial Accounting Standards Board issued guidance that changes the accounting for repurchase-to-maturity transactions and repurchase financing arrangements. The new guidance aligns the accounting for repurchase-to-maturity transactions and repurchase agreements executed as a repurchase financing with the accounting for other typical repurchase agreements. These transactions would all be accounted for as secured borrowings. The guidance eliminates sale accounting for repurchase-to-maturity transactions and supersedes the guidance under which a transfer of a financial asset and a contemporaneous repurchase financing could be accounted for on a combined basis as a forward agreement, which has resulted in outcomes referred to as off-balance-sheet accounting. In addition, the guidance requires additional disclosures. The guidance is effective for the first interim or annual period beginning after December 15, 2014. Earlier application for a public company is prohibited. Certain disclosures under this guidance do not take effect until the first period beginning after March 15, 2015. We currently account for certain transfers as forward agreements under the existing guidance, which are currently classified as linked transactions. The new guidance will require us to record these transfers as secured borrowings. The implementation of the new guidance will result in a cumulative-effect adjustment to retained earnings as of the beginning of the period of adoption. The new guidance is not expected to have a material impact on our consolidated financial statements.

In August 2014, the Financial Accounting Standards Board issued guidance that will require an entity’s management to evaluate whether there is substantial doubt about an entity’s ability to continue as a going concern and to provide related footnote disclosures. According to the new guidance, substantial doubt exists when conditions and events, considered in the aggregate, indicate that it is probable that the entity will be unable to meet its obligations as they become due within one year after the date the financial statements are issued. The term “probable” is used consistently with its current use in U.S. GAAP for loss contingencies. Disclosures will be required if conditions give rise to substantial doubt about the entity’s ability to continue as a going concern, including whether management’s plans that are intended to mitigate those conditions will alleviate the substantial doubt when implemented. The guidance is effective for annual periods ending after December 15, 2016. Early application is permitted. Our first assessment under the new guidance will be completed for the year ending December 31, 2016.

In January 2015, the FASB issued guidance to simplify income statement presentation by eliminating the concept of extraordinary items. U.S. GAAP currently requires that a company separately classify, disclose and present extraordinary events and transactions. The guidance eliminates the concept of extraordinary items from U.S. GAAP. Under the existing guidance, an entity is required to separately disclose extraordinary items, net of tax, in the income statement after income from continuing operations if an event or transaction is of an unusual nature and occurs infrequently. This separate, net-of-tax presentation (and corresponding earnings per share impact) will no longer be allowed. The existing requirement to separately present items that are of an unusual nature or occur infrequently on a pre-tax basis within income from continuing operations has been retained. The new guidance also requires similar separate presentation of items that are both unusual and infrequent. The standard is effective for periods beginning after December 15, 2015. Early adoption is permitted, but only as of the beginning of the fiscal year of adoption. Upon adoption, a reporting entity may elect prospective or retrospective application. If adopted prospectively, both the nature and amount of any subsequent adjustments to previously reported extraordinary items must be disclosed. The new guidance is not expected to have a material impact on our consolidated financial statements.

In February 2015, the FASB issued guidance to simplify and reduce the number of consolidation models through the elimination of an indefinite deferral for certain entities and by placing more emphasis on risk of loss when determining a controlling financial interest. The guidance affects reporting entities that are required to evaluate whether they should consolidate certain legal entities. All legal entities are subject to reevaluation under the revised consolidation model. The standard is effective for fiscal years, and for interim periods within fiscal years beginning after December 15, 2015. Early adoption is permitted, including adoption in an interim period. If an entity early adopts the amendments in an interim period, any adjustments should be reflected as of the beginning of the fiscal year that includes that interim period. We are currently assessing the impact that this guidance will have on our consolidated financial statements when adopted.

### Results of Operations

The following discussion of our results of operations highlights our performance for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012. For the year ended December 31, 2014, we had net income of \$100.7 million or \$2.67 per basic and diluted weighted average common share. For the year ended December 31, 2013, we had a net loss of \$27.9 million or \$1.19 per basic and diluted weighted average common share. From May 15, 2012 (commencement of operations) through December 31, 2012, we had net income of \$57.3 million or \$3.64 per basic and \$3.63 diluted weighted average common share. During the later portion of 2013, and continuing through 2014 we expanded our investment in Non-Agency MBS and commenced investing in CMBS and other credit oriented structured securities and adjusted our overall leverage and hedging strategy pursuant to our current business plan. Accordingly, operating results for the partial period from May 15, 2012 through December 31, 2012 may not be fully comparable with the results of our operations for the full years ended December 31, 2014 and December 31, 2013.

### Investments

The following table presents certain information about our investment portfolio at December 31, 2014 which is a Non-GAAP measure due to the inclusion of our Linked Transactions, in order to present a complete economic presentation of our portfolio, which is reconciled to GAAP below, as follows (dollars in thousands):

	Principal Balance	Unamortized Premium (Discount)	Discount Designated as Credit Reserve and OTTI	Amortized Cost	Unrealized Gain (Loss)	Fair Value	Net Weighted Average Coupon(1)
Agency RMBS 20-Year Mortgage

- (1) Net weighted average coupon as of December 31, 2014 is presented net of servicing and other fees.
- (2) Agency RMBS IOs and IIOs, Non-Agency RMBS IOs and IIOs, Agency and Non-Agency IOs and IIOs, accounted for as derivatives, and Agency and Non-Agency CMBS IOs and IIOs have no principal balances and bear interest based on a notional balance. The notional balance is used solely to determine interest distributions on interest-only class of securities. At December 31, 2014, the notional balance for Agency RMBS IOs and IIOs, Non-Agency IOs and IIOs, Agency, Non-Agency IOs and IIOs, accounted for as derivatives, and CMBS IOs and IIOs was \$1.2 billion, \$329.7 million, \$818.7 million and \$46.6 million, respectively.
- (3) Interest on these securities is reported as a component of Gain (loss) on derivative instruments, net.
- (4) Other securities includes a residual interest in asset-backed securities which has no principal balance and an amortized cost of approximately \$7.4 million.

The following table summarizes our MBS and other securities at fair value according to their estimated weighted average life classifications as of December 31, 2014 (dollars in thousands):

Weighted Average Life	Fair Value, Including Linked Transactions (Non-GAAP)	Fair Value, Linked Transactions	Fair Value (GAAP Basis)	Net Weighted Average Coupon (GAAP Basis)(1)	Net Weighted Average Coupon (Non-GAAP Basis)(1)
Less than or equal to three years . . .	\$ 80,639	\$ 6,002	\$ 74,637	5.5%	5.6%
Greater than three years and less than or equal to five years . . . . .	955,319	—	955,319	4.0%	4.0%
Greater than five years and less than or equal to 10 years . . . . .	3,089,052	32,608	3,056,444	3.7%	3.8%

Below B . . . . .	92.3%	Below B	50.7%	Below B	17.9%
Not Rated . . . . .	5.9%	Not Rated	24.5%	Not Rated	68.3%
Total . . . . .	<u>100.0%</u>	<u>Total</u>	<u>100.0%</u>	<u>Total</u>	<u>100.0%</u>

(1) For securities for which one or two ratings are obtained, the lowest rating is used. For securities for which three ratings are obtained, the middle rating is used. Ratings are obtained either from S&P or other rating agencies, stated in terms of the S&P equivalent.

(2) Includes the fair value of Non-Agency RMBS underlying linked transactions of \$8.2 million.

(3) Includes the fair value of Non-Agency CMBS underlying linked transactions of \$38.6 million.

(4) Includes the fair value of Other securities underlying linked transactions of \$5.7 million.

The following table details information for our Non-Agency and other securities portfolio as of December 31, 2014, based on our Manager's estimates which are based on third party models, as adjusted by our Manager, and are updated quarterly on a prospective basis:

	Cumulative Default		Cumulative Severity		Cumulative 5-Year CRR	
	Low	High	Low	High	Low	High
Non-Agency RMBS	6.39%	56.11%	4.00%	87.65%	6.85%	7.23%
Non-Agency RMBS IOs and IIOs	20.68%	40.23%	15.81%	78.45%	6.99%	6.99%
Non-Agency RMBS IOS and IIOs accounted for as derivatives	12.81%	22.76%	4.00%	63.52%	7.97%	7.97%
Non-Agency CMBS	—%	0.50%	N/A	N/A	N/A	N/A
Other securities	—%	23.89%	—%	95.07%	1.00%	10.00%
Linked transactions, net, at fair value	—%	28.95%	58.93%	95.07%	4.00%	8.24%

We made investments in certain Non-Agency RMBS inverse floaters. The coupon rates on these securities have an inverse relationship to a benchmark rate. When the benchmark interest rate increases the coupon payment rate will decrease because the benchmark interest rate is deducted from the coupon payment. We generally purchased these securities at a premium. Accelerated prepayments on these bonds could result in an economic loss, as we would not recover the upfront premium. The premiums are amortized into income using the effective interest rate method. As of December 31, 2014 and December 31, 2013, we held \$93.9 million and \$22.7 million, respectively, in Non-Agency RMBS inverse floaters excluding linked transactions. In addition as of December 31, 2014 and December 31, 2013, we held \$8.2 million and \$71.0 million, respectively in Non-Agency RMBS inverse floaters accounted for as linked transactions.

The following table presents certain information about our residential whole-loans investment portfolio at December 31, 2014:

Current Coupon Rate	Number of Loans	Principal Balance	Weighted Average Loan to Value	Weighted Average FICO Score	Weighted Average Life to Maturity (years)	Weighted Average Coupon Rate
4.01 - 5.00% . . .	5	\$3,387	63.8%	744	4.2	4.8%
5.01 - 6.00% . . .	3	1,001	74.0%	742	3.0	5.8%
6.01 - 7.00% . . .	7	2,044	70.6%	713	4.1	6.6%
7.01 - 8.00% . . .	3	381	66.6%	669	4.4	7.3%
8.01 - 9.00% . . .	1	221	75.0%	665	2.1	8.5%
Total . . . . .	19	\$7,034	67.7%	728	3.9	5.7%

The following table presents the U.S. states represented in residential whole-loans at December 31, 2014 based on principal balance:

	State Concentration	Principal Balance
California	58.1%	\$4,085
Florida	23.8	1,675
West Virginia	9.2	649
New Jersey	4.7	327
Virginia	2.1	149
Pennsylvania	2.1	149
Total	100.0%	\$7,034

**Investment Activity**

Agency and Non-Agency RMBS, Agency and Non-Agency CMBS, IO and IIO Securities, Other Securities and Residential Whole-Loans.

The following tables present our investment portfolio activity, including linked transactions (Non-GAAP) for the years ended December 31, 2014, December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (dollars in thousands):

	For the year ended December 31, 2014		
	Purchases	Principal Payments and Basis Recovery	Proceeds from Sales
Agency RMBS and Agency RMBS IOs and IIOs	\$2,461,316	\$263,947	\$1,608,541

	For the period from May 15, 2012 (commencement of operations) through December 31, 2012		
	Purchases	Principal Payments and Basis Recovery	Proceeds from Sales
Agency RMBS and Agency RMBS IOs and IIOs . . . . .	\$7,679,165	\$105,681	\$2,389,472
Non-Agency RMBS . . . . .	19,147	67	—
Other Securities . . . . .	100,655	—	100,854
Total MBS (GAAP) . . . . .	<u>\$7,798,967</u>	<u>\$105,748</u>	<u>\$2,490,326</u>

For the years ended December 31, 2014 and December 31, 2013, we settled certain derivatives realizing a net gain of \$1.1 million and a net gain of approximately \$1.7 million, respectively from the unlinking of securities previously accounted for as derivatives through linked transactions. We reclassify, from mark-to-market, adjustments on linked transactions to realized gain (loss) on linked transactions during the period the security becomes unlinked. For the period from May 15, 2012 (commencement of operations) through December 31, 2012 we did not realize any gains or losses on unlinking of securities previously accounted for as derivatives through linked transactions.

The following table presents the vintage of our investment portfolio, including linked transactions, at December 31, 2014:

	2001	2003	2004	2005	2006	2007	2009	2010	2011	2012	2013	2014	Total

As of December 31, 2014 the weighted average expected remaining term to the expected maturity of our investment portfolio, including linked transactions is 6.7 years.

*Financing and Other Liabilities.* We have entered into repurchase agreements to finance a substantial majority of our MBS and other securities. These agreements are secured by substantially all of our MBS and other securities and bear interest at rates that have historically moved in close relationship to LIBOR. The following table summarizes the fair value of MBS and other collateral pledged as of December 31, 2014, December 31, 2013 and December 31, 2012.

Collateral	December 31, 2014		December 31, 2013		December 31, 2012	
	Repurchase Agreement Borrowings Outstanding	Fair Value of Collateral Pledged (1)	Repurchase Agreement Borrowings Outstanding	Fair Value of MBS Collateral Pledged	Repurchase Agreement Borrowings Outstanding	Fair Value of MBS Collateral Pledged

Other securities Linked Transactions . . . . .	9,381	6,541	—	—	—	—
Total . . . . .	<u>\$23,000,921</u>	<u>\$21,731,509</u>	<u>\$30,113,295</u>	<u>\$32,267,771</u>	<u>\$14,511,707</u>	<u>\$9,716,977</u>

(1) Other securities includes repurchase borrowings proceeds of \$4.9 million and repayments of \$0 for borrowings collateralized by residential whole-loans owned through trust certificates for the year ended December 31, 2014. The trust certificates are eliminated upon consolidation.

As discussed further in Note 2—Revision of Previously Issued Financial Statements for Errors Affecting Certain Items Presented in the Statements of Cash Flows and Notes to Financial Statements, we have elected to revise our presentation of borrowing activity, by type of collateral pledged, for the three and six months ended June 30, 2014 and for the nine months ended September 30, 2014 when they are next filed in our quarterly financial statements on Form 10-Q for the quarters ending June 30, 2015 and September 30, 2015 to correct these errors.

The effect of these errors on the tables presenting our borrowing activity, by type of collateral pledged, for the three and six months ended June 30, 2014 and the nine months ended September 30, 2014 (summarized):

**As Originally Reported**

- The effective cost of funds for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, are calculated on an annualized basis and include interest expense for the periods and net periodic interest payments on interest rate swaps, net of premium amortization on MAC swaps, of approximately \$29.9 million, \$22.9 million and \$6.3 million, respectively, interest payments on Agency RMBS linked transactions of approximately \$0, \$6 thousand and \$0, respectively, interest payments on Non-Agency RMBS linked transactions of approximately \$346 thousand, \$265 thousand and \$0, respectively, interest payments on Non-Agency CMBS linked transactions of approximately \$167 thousand, \$0 and \$0, respectively, and interest payments on other securities linked transactions of approximately \$33 thousand, \$0 and \$0, respectively. While swaps are not accounted for using hedge accounting, such instruments are viewed by us as an economic hedge against increases in interest rates on our liabilities and are classified as hedges for purposes of satisfying the REIT requirements. In addition, although certain securities and their respective repurchase borrowings are classified as derivatives, we view the interest expense attributed to these borrowings as additional cost of funds. See “Non-GAAP Financial Measures.”
- Other securities include repurchase borrowings of \$4.9 million for residential whole-loans owned through trust certificates at December 31, 2014. The trust certificates are eliminated upon consolidation.

The following table presents our average borrowings, by type of collateral pledged, on a GAAP and Non-GAAP basis for the years ended December 31, 2014 and December 31, 2013, and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (in thousands):

Collateral	For the year ended December 31, 2014	For the year ended December 31, 2013	For the period from May 15, 2012 (commencement of operations) through December 31, 2012
Agency RMBS	\$3,019,411	\$3,681,656	\$2,840,999
Non-Agency RMBS	393,426	114,053	—
Agency and Non-Agency CMBS	218,995	4,525	—
Other securities(1)	67,275	5,257	—

Total (Non-GAAP)	\$3,730,206	\$3,821,926	\$2,840,999
Maximum borrowings during the period (Non-GAAP)(2)	4,258,778	4,808,778	4,900,556

- (1) Other securities include average repurchase borrowings of \$1.2 million for residential whole-loans owned through trust certificates for the year ended December 31, 2014. The trust certificates are eliminated upon consolidation.
- (2) Amount represents the maximum borrowings at month-end during each of the respective periods.

Derivative Instruments. As of December 31, 2014, we had entered into swaps designed to mitigate the effects of increases in interest rates under a portion of our repurchase agreements as such repurchase agreements are renewed and/or extended. The swaps generally provide for fixed interest rates that are indexed off of LIBOR and are viewed by us to effectively fix the floating interest rates, on our repurchase agreements. In managing our interest rate swap position in conjunction with our hedging strategy and potential tax implications, we may enter into variable-rate payment swaps which effectively act as an offset to fixed-rate payment swaps. As of December 31, 2014, we had approximately \$2.1 billion of variable-rate payment swaps in addition to \$110.0 million of forward starting variable-rate payment swaps.

The following table presents information about our fixed pay rate interest rate swaps as of December 31, 2014 and December 31, 2013 (dollars in thousands):

December 31, 2014					
Remaining Interest Rate Swap Term	Notional Amount	Fair Value—Asset (Liability), net	Average Fixed Pay Rate	Average Maturity (Years)	Forward Starting

TBA securities, net	\$ 325,000	\$ 5,102	\$190,000	\$(1,172)	\$ —	\$ 1,837

The following table presents additional information about our contracts to purchase and sell TBAs for the years ended December 31, 2014 and December 31, 2013 (dollars in thousands):

	Notional Amount as of December 31, 2012		Settlement, Termination, Expiration or Exercise	Notional Amount as of December 31, 2013		Settlement, Termination, Expiration or Exercise	Notional Amount as of December 31, 2014
		Additions			Additions		
Purchase of TBAs	\$425,000	\$2,507,600	\$(2,742,600)	\$190,000	\$25,353,196	\$(22,628,196)	\$2,915,000
Sale of TBAs	\$425,000	\$2,350,000	\$(2,775,000)	\$ —	\$25,218,196	\$(22,628,196)	\$2,590,000

We also entered into Eurodollar futures during the year ended December 31, 2014. As of December 31, 2014, we had purchase contracts (“long position”), representing a notional amount of \$592.0 million with a fair value of \$451 thousand and an expiration date of June 2016. In addition, as of December 31, 2014, we had contracts to sell (“short position”), representing a notional amount of \$592.0 million with a fair value in a liability position of \$1.2 million and an expiration date of June 2018.

During the year ended December 31, 2014, we entered into foreign currency forwards and foreign currency swaps. The following is a summary of our foreign currency forwards at December 31, 2014 (dollars and euros in thousands):

Derivative Type	Notional Amount	Notional (USD Equivalent)	Maturity	Fair Value
Buy USD/Sell EUR Currency forward	€ 3,331	\$ 4,143	January 2015	\$ 112
Buy USD/Sell EUR Currency forward	7,766	9,417	January 2015	21
Buy USD/Sell EUR Currency forward	3,471	4,211	February 2015	9
Buy EUR/Sell USD Currency forward	5,000	6,051	January 2015	1
Currency forwards, assets	€19,568	\$23,822	n/a	\$ 143
Buy USD/Sell EUR Currency forward	€ 5,043	\$ 6,104	February 2015	\$ (1)
Buy EUR/Sell USD Currency forward	11,156	13,542	April 2015	(30)

Currency forwards, liabilities	€27,355	\$33,560	n/a	\$(446)
Total currency forwards	€46,923	\$57,382	n/a	\$(303)

The following is a summary of our foreign currency swaps with a fair value of \$3.9 million at December 31, 2014:

<u>Date entered</u>	<u>Maturity</u>	<u>Fixed Rate</u>	<u>Denomination</u>	<u>Notional Amount</u>
June 2014 . . . . .	July 2024	7.25%	EUR	18,500
June 2014 . . . . .	July 2024	9.005%	USD	25,160

**Net Interest Income**

We earned interest income, net of premium amortization and amortization/recovery of basis, and inclusive of discount accretion of approximately \$149.1 million and \$125.3 million for the years ended December 31, 2014 and December 31, 2013, respectively and approximately \$53.3 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012 which represents interest earned on our assets. We incurred interest expense of approximately \$22.3 million and \$18.0 million for the years ended December 31, 2014 and December 31, 2013, respectively and approximately \$8.1 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012, which was related to borrowings from repurchase agreements. The increase in interest income is primarily attributable the change in the composition of portfolio between 2012 and 2014, as well as an overall increase in the size of the portfolio. When we went public in 2012, our focus Agency RMBS and at year-end, our portfolio consisted almost entirely of Agency RMBS. In 2013, the percentage of Agency RMBS in our portfolio decreased from 99.9% to 94.9% with the difference being invested almost entirely in Non-Agency RMBS. This trend continued in 2014, with the percentage of Agency RMBS decreasing to 77.8% and the percentage of Non-Agency RMBS and CMBS increasing to 13.5% and 6.7% respectively. As we shifted to a more credit-oriented portfolio, our average yield increased to 3.63% and 3.09%, respectively for the years ended December 31, 2014 and 2013 from 2.62% for the period May 15, 2012 (commencement of operations) to December 31, 2012. While our average cost of funds also increased from 0.60% and 0.47%, respectively for the years ended December 31, 2014 and 2013 from 0.45% for the period May 15, 2012 (commencement of operations) to December 31, 2012 this was more than outweighed by the increase average yield, resulting in an increase in net interest spread to 3.03% and 2.62%, respectively for the years ended December 2014 and 2013 from 2.17% for the period May 15, 2012 (commencement of operations) to December 31, 2012. Other factors impacting interest income include leverage and assumptions pertaining prepayments, defaults and loss severity. Cost of repurchase financing for Agency RMBS remained relatively constant over the past three years as the Federal Reserve continued to maintain its accommodative monetary policy. We have supplemented our discussion of GAAP net interest income discussed above, with a discussion below of our net interest rate spread including interest income (expense) on Agency and Non-Agency Interest-Only Strips accounted as derivatives and net interest income (expenses), net incurred on swaps and linked-transactions, a Non-GAAP measure, defined below, which gives a more concise view of our hedged portfolio as a whole.

Our effective gross yield, a non-GAAP measure, for the years ended December 31, 2014 and 2013 was 3.75% and 3.28%, respectively and 2.76% for the period from May 15, 2012 (commencement of operations) through December 31, 2012. Our effective gross yield, a non-GAAP measure, increased for the year ended December 31, 2014 and 2013 due to the change in composition of our portfolio. Our effective cost of funds, a non-GAAP measure, for the years ended December 31, 2014 and 2013 was 1.41% and 1.08%, respectively and 0.80% for the period May 15, 2012 (commencement of operations) through December 31, 2012. The increase in our effective cost of funds for the year ended December 31, 2014 and 2013 primarily resulted from an increase in hedging in order to lower our overall duration. Similarly, the increase in our effective cost of funds for the year ended December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, primarily resulted from an increase in hedging in order to lower our overall duration, coupled with a change in our portfolio composition.

- (1) Includes proceeds for Agency Interest-Only Strips, accounted for as derivatives, of approximately \$20.4 million and gross realized losses of approximately \$1.1 million.

	For the period from May 15, 2012 (commencement of operations) through December 31, 2012			
	Proceeds	Gross Gains	Gross Losses	Net Gain (Loss)
Agency RMBS(1)	\$2,389,472	\$23,169	\$(3,434)	\$19,735
Other Securities	100,854	199	—	199
Total	\$2,490,326	\$23,368	\$(3,434)	\$19,934

- (1) Includes proceeds for Agency Interest-Only Strips, accounted for as derivatives, of approximately \$18.5 million and gross realized losses of approximately \$820 thousand.

The MBS and structured securities markets remain dynamic and, at times, volatile markets. Our Manager regularly reviews the characteristics of our portfolio and may make changes to our portfolio in order to adjust such portfolio characteristics in response to and/or anticipation of changing market conditions in an effort to achieve the appropriate risk reward ratio. Accordingly, due to changes in market conditions or expected changes in market conditions, we sold these MBS and other securities in order to adjust the overall characteristics of our portfolio including, but not limited to, prepayment expectations and duration.

With respect to our MBS, other securities and residential whole-loans, we elected the fair value option and, as a result, we record the change in fair value related to MBS, other securities and residential whole-loans in earnings. The following tables present amounts related to realized gains and losses as well as changes in fair value of our securities portfolio and derivative instruments that are included in our Consolidated Statement of Operations for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (dollars in thousands):

**For the year ended December 31, 2014:**

(1) Contractual interest income (expense), net on derivative instruments includes interest settlement paid or received.

With respect to our portfolio, OTTI is generally recorded when the credit quality of the underlying collateral deteriorates and or the schedule payments are faster than previously projected. The credit deterioration could be as a result of, but not limited to increased projected realized losses, foreclosures, delinquencies and the likelihood of the borrower being able to make payments in the future. Generally, a prepayment occurs when a loan has a higher interest rate relative to current interest rates and lenders are willing to extend credit at the lower current interest rate.

In order to mitigate interest rate risk resulting from our future repurchase agreement borrowings, we entered into interest rate swaps with an aggregate notional amount of approximately \$7.9 billion, of which \$2.5 billion are forward starting. Our effective swaps are comprised of approximately \$3.4 billion fixed pay rate swaps and \$2.1 billion are variable pay swaps, which effectively fix (for the life of the swap) the floating interest rate of approximately \$1.4 billion and interest rate swaptions with an aggregate notional amount of approximately \$105.0 million at December 31, 2014. Similarly, we have entered into currency swaps and currency forwards with an aggregate notional amount of approximately \$82.5 million (€ 65.4 million) in order to mitigate our foreign currency risk on our euro denominated assets and liabilities. While not designated as a hedge for accounting purposes, our current and future interest rate swaps, interest rate swaptions, foreign currency swaps and foreign currency forwards are, respectively viewed as an economic hedge on a portion of our floating-rate borrowings and foreign currency rate exposure, respectively. Since we do not apply hedge accounting for these instruments, we record the change in fair value related to such agreements in earnings in gain (loss) on derivative instruments, net. Included in gain (loss) on derivative instruments, net are the net interest rate swap payments and currency payments (including accrued amounts) associated with these instruments.

**Expenses**

**General and Administrative Expenses**

We incurred general and administrative expenses of approximately \$9.1 million and \$6.4 million for the years ended December 31, 2014 and December 31, 2013, respectively and approximately \$3.2 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012, which represents professional fees, insurance, non-cash stock based compensation and overhead costs of the Company. The increase in general and administrative expenses from 2014 over 2013 is primarily due to an increase in equity based compensation, custodian fees, compensation expense for our chief financial officer and controller, and transaction costs related to the implementation of our residential whole-loan program. The increase in general and administrative expenses from 2013 over 2012 is primarily due to a full year of operations in 2013.

**Management Fee Expense**

We incurred management fee expense of approximately \$9.6 million and \$7.8 million for the years ended December 31, 2014 and December 31, 2013, respectively and approximately \$3.1 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012, of which approximately \$2.5 million was payable at December 31, 2014 to our Manager under the Management Agreement. Pursuant to the terms of the Management Agreement, our Manager is paid a management fee equal to 1.5% per annum of our stockholders' equity (as defined in the Management Agreement), calculated and payable (in cash) quarterly in arrears. Management fees primarily increased from 2014 over 2013 due to an increase in our stockholder's equity resulting from the successful completion of our follow-on offering in April 2014. Management fees primarily increased from 2013 over 2012 due to a follow-on public offering in October 2012 and a full year of operations in 2013.

The management fees, expense reimbursements and the relationship between our Manager and us are discussed further in Note 11, "Related Party Transactions," to the financial statements contained in this Annual Report on Form 10-K.

## Dividends

The following table presents cash dividends declared and paid by us on our common stock:

<u>Declaration Date</u>	<u>Record Date</u>	<u>Payment Date</u>	<u>Amount per Share</u>	<u>Tax Characterization</u>
<b>2014</b>				
December 18, 2014	December 29, 2014	January 27, 2015	\$0.70	Ordinary income
September 23, 2014	October 3, 2014	October 28, 2014	\$0.70	Ordinary income
June 19, 2014	June 30, 2014	July 29, 2014	\$0.67	Ordinary income
March 20, 2014	March 31, 2014	April 29, 2014	\$0.67	Ordinary income
<b>2013</b>				
April 1, 2013	April 12, 2013	April 30, 2013	\$0.95	Ordinary income
June 20, 2013	July 1, 2013	July 29, 2013	\$0.90	Ordinary income
September 19, 2013	September 30, 2013	October 29, 2013	\$0.90	Ordinary income
December 19, 2013	December 30, 2013	January 28, 2014	\$2.35(1)	Ordinary income
<b>2012</b>				
July 26, 2012	August 6, 2012	August 14, 2012	\$0.38	Ordinary income
September 20, 2012	October 1, 2012	October 25, 2012	\$0.85	Ordinary income
December 19, 2012	December 31, 2012	January 29, 2013	\$1.12	Ordinary income

(1) Consisting of cash and stock. For stockholders who elected to receive the entire \$2.35 per share dividend in stock, each stockholder received 0.1590 shares in newly issued common stock for each common share that they held as of the dividend record date. For stockholders who elected to receive the dividend in cash, or did not make an election, each stockholder received \$0.9159 per share in cash and 0.0970 shares in newly issued common stock for each common share that they held as of the dividend record date.

## Liquidity and Capital Resources

### General

Our liquidity and capital resources are managed on a daily basis to ensure that we have sufficient liquidity to absorb market events that could negatively impact collateral valuations and result in margin calls as well as to ensure that we have the flexibility to manage our investment portfolio to take advantage of market opportunities.

Liquidity is a measure of our ability to meet potential cash requirements, including ongoing commitments to repay borrowings, fund and maintain our assets and operations, make distributions to our stockholders and other general business needs. We use cash to purchase our Target Assets, repay principal and interest on our borrowings, make distributions to our stockholders and fund our operations.

Under our repurchase agreements and derivative contracts, lenders and counterparties retain the right to determine the fair value of the collateral pledged, or in the case of cleared swaps the required collateral may be determined by clearinghouse rules. A reduction in the value of the collateral pledged will require us to provide additional collateral or fund cash margin calls. Alternatively, since margins calls for our interest rate swaps and swaptions generally are inversely correlated to those of our repurchase agreements, our interest rate swap and swaptions counterparties would likely be required to post collateral with us during a period in which we were required to post collateral with our repurchase agreement counterparties. During 2014, the fixed income markets experienced a sustained period of volatility in the U.S. Treasury market. This resulted in an increase in the valuation of our MBS portfolio and an offsetting reduction in the collateral required to support our repurchase financing. Higher rate volatility resulted in wider mortgage spreads and a higher cost of hedging. We were able to satisfy our additional collateral requirements pertaining primarily to our swaps and swaptions with cash on hand and proceeds from our repurchase agreement borrowings. We were not forced to involuntarily sell any of our assets, nor did any of our counterparties sell any of our assets held by them as collateral. During 2014 and 2013, we rehypothecated some of the securities we received as incremental collateral on our repurchase borrowings, swaps and swaptions, effectively entering into repurchase agreements with such securities, in order to increase our cash position. The maximum amount of repurchase borrowings for the rehypothecated securities was \$3.3 million and \$130.7 million during the years ended December 31, 2014 and December 31, 2013, respectively. At December 31, 2014, no securities were rehypothecated. In an instance of severe volatility, or where the additional stress on liquidity resulting from volatility is sustained over an extended period of time, we could be required to sell securities, possibly even at a loss to generate sufficient liquidity to satisfy collateral and margin requirements which could have a material adverse effect on our financial position, results of operations and cash flows.

As part of our risk management process, our Manager closely monitors our liquidity position. This includes the development and evaluation of various alternative processes and procedures, which continue to be updated with regard to scenario testing for purposes of assessing our liquidity in the face of different economic and market developments. We believe we have sufficient current liquidity and access to additional liquidity to meet financial obligations for at least the next 12 months.

Our primary sources of liquidity are as follows:

### *Cash Generated from Initial Public Offering, Concurrent Private Placements and Follow-On Public Offerings and Private Placements*

On May 15, 2012, we completed our IPO and concurrent private placement generating net proceeds of approximately \$204.4 million. On October 3, 2012, we completed a follow-on public offering, including the exercise by the underwriters of the entire option to acquire additional shares, generating net proceeds of approximately \$301.0 million. During the second quarter of 2014, we completed a follow-on public offering, including the exercise by the underwriters of a portion of an option to acquire additional shares resulting in net proceeds to us of approximately \$205.4 million. In addition, we sold shares to our Manager in a private placement for an aggregate offering price of approximately \$9.7 million.

**Borrowing under Various Financing Arrangements**

As of December 31, 2014, we had master repurchase agreements with 24 counterparties. We had borrowings under repurchase agreements with 21 counterparties of approximately \$3.9 billion at December 31, 2014. The following tables present our borrowings by type of collateral pledged as of December 31, 2014, December 31, 2013 and December 31, 2012, and the respective effective cost of funds (Non-GAAP financial measure) for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively. See “Non-GAAP Financial Measures” (dollars in thousands):

Total (Non-GAAP) . . . . .	<u>\$3,907,578</u>	<u>\$4,422,235</u>	<u>0.67%</u>	<u>0.60%</u>	<u>1.41%</u>

- (1) Excludes approximately \$25.7 million of cash collateral posted.
- (2) The effective cost of funds for the period presented is calculated on an annualized basis and includes interest expense for the period and net periodic interest payments on interest rate swaps, net of premium amortization on MAC swaps, of approximately \$29.9 million and interest expense on linked transactions of approximately \$546 thousand for the year ended December 31, 2014. While interest rate swaps are not accounted for using hedge accounting, such instruments are viewed by us as an economic hedge against increases in interest rates on our liabilities and are treated as hedges for purposes of satisfying the REIT requirements. See “Non-GAAP Financial Measures”.
- (3) Other securities includes repurchase borrowings of \$4.9 million and collateral pledged attributed to residential whole-loans owned through trust certificates with a fair value of \$7.2 million at December 31, 2014. The trust certificates are eliminated upon consolidation.
- (4) Including Non U.S. CMBS pledged as collateral and Non U.S. repurchase agreement borrowings.

Collateral	Repurchase Agreement Borrowings Outstanding December 31, 2013	Fair Value of Collateral Pledged(1)	Weighted Average Interest Rate end of period	Weighted Average Cost of Funds for the year ended December 31, 2013	Weighted Average Effective Cost of Funds (Non-GAAP) for the year ended December 31, 2013(2)

- (1) Excludes approximately \$32.6 million of cash collateral posted.
- (2) The effective cost of funds for the period presented is calculated on an annualized basis and includes interest expense for the period and net periodic interest payments on interest rate swaps of approximately \$22.9 million and interest expense on linked transactions of approximately \$271 thousand. While interest rate swaps are not accounted for using hedge accounting, such instruments are viewed by us as an economic hedge against increases in interest rates on our liabilities and are treated as hedges for purposes of satisfying the REIT requirements. See “Non-GAAP Financial Measures”.

Collateral	Repurchase Agreement Borrowings Outstanding December 31, 2012	Fair Value of Collateral Pledged(1)	Weighted Average Interest Rate end of period	Weighted Average Cost of Funds for the period from May 15, 2012 (commencement of operations) through December 31, 2012	Weighted Average Effective Cost of Funds (Non-GAAP) for the period from May 15, 2012 (commencement of operations) through December 31, 2012(2)
Agency RMBS . . . . .	\$4,794,730	\$5,043,824	0.48%	0.45%	0.80%
Total (Non-GAAP) . . . . .	<u>\$4,794,730</u>	<u>\$5,043,824</u>	<u>0.48%</u>	<u>0.45%</u>	<u>0.80%</u>

- (1) Excludes approximately \$36.0 million of cash collateral for Agency RMBS.
- (2) The effective cost of funds for the period presented is calculated on an annualized basis and includes interest expense for the period and net periodic interest payments on interest rate swaps of approximately \$6.3 million. While interest rate swaps are not accounted for using hedge accounting, such instruments are viewed by us as an economic hedge against increases in interest rates on our liabilities and are treated as hedges for purposes of satisfying the REIT requirements. See “Non-GAAP Financial Measures”.

As of December 31, 2014, our repurchase agreements with 24 counterparties, require collateral in excess of the loan amount, or haircuts, ranging from a low of 3.0% to a high of 5.0% for Agency RMBS, exclusive of IOs and IIOs for which the haircuts are as high as 25.0%. For Non-Agency RMBS and Agency and Non-Agency CMBS and other securities, haircuts range from a low of 13.0% to a high of 60.0%. Haircuts for other securities range from a low of 20.0% to a high of 55.0%. Declines in the value of our portfolio can trigger margin calls by our lenders under our repurchase agreements. Margin calls could adversely affect our liquidity. Our inability to post adequate collateral for a margin call by the counterparty could result in a condition of default under our repurchase agreements. An event of default or termination event would give some of our counterparties the option to terminate all existing repurchase transactions with us and require any amount due to the counterparties by us to be payable immediately. In which case, we may be forced to sell assets under adverse market conditions or through foreclosure which may have a material adverse consequence on our business, financial position, our results of operations and cash flows. During the year ended December 31, 2014, we were able to satisfy margin calls using cash on hand, unlevered or underleveraged securities, cash from rehypothecation of securities received as incremental collateral and cash from our repurchase agreement borrowings. No event of default occurred.

Under the repurchase agreements and derivative contracts, the respective lenders and counterparties, subject to the terms of the individual agreements and in the case of cleared swaps, the clearinghouse rules, retain the right to determine the fair value of the underlying collateral. A reduction in the value of pledged assets requires us to provide additional collateral or fund margin calls. In addition, certain of the repurchase agreements may be terminated by our counterparties if we do not maintain certain equity and leverage metrics. We are compliant with these tests at December 31, 2014. At December 31, 2014, MBS and other securities held by counterparties as security for repurchase agreements totaled approximately \$4.4 billion, inclusive of MBS and other securities posted of \$52.5 million for repurchase agreements accounted for as linked transactions and \$7.2 million for repurchase agreements for residential whole-loans owned through trust certificates. At December 31, 2013, MBS held by counterparties as security for repurchase agreements totaled approximately \$2.9 billion, inclusive of MBS posted of \$79.7 million for repurchase agreements accounted for as linked transactions.

We are also required to pledge cash or securities as collateral as part of a margin arrangement, calculated daily, in connection with the swaps and swaptions. The amount of margin that we are required to post will vary and generally reflects collateral posted with respect to swaps that are in an unrealized loss position to us and a percentage of the aggregate notional amount of swaps per counterparty as well as margin posted with our clearing broker, pursuant to clearinghouse rules and practices, for cleared swaps. Conversely, if our bilateral swaps and swaptions are in an unrealized gain position, our counterparties are required to post collateral with us, under the same terms that we post collateral with them. On occasion we may enter into a MAC interest rate swap in which we may receive or make a payment at the time of entering such interest rate swap to compensate for the out of the market nature of such interest rate swap. Similar to all other interest rate swaps, these interest rate swaps are also subject to margin requirements previously described.

Cash collateral held by counterparties at December 31, 2014 was approximately \$184.8 million, which is included in Due from counterparties on our Consolidated Balance Sheets, comprised of approximately \$25.7 million held in connection with repurchase agreement borrowings, approximately \$959 thousand held in connection with our futures contracts, approximately \$0 thousand held in connection with TBAs and approximately \$158.1 million held by our interest rate swap counterparties. At December 31, 2014, Due to counterparties on our Consolidated Balance Sheets was comprised of approximately \$2.1 million posted with us by our repurchase agreement counterparties, approximately \$6.6 million posted in connection with our TBAs and approximately \$3.5 million posted by our interest rate swap and swaption counterparties. Cash collateral held by counterparties at December 31, 2013 was approximately \$55.4 million, which is included in Due from counterparties on our Consolidated Balance Sheets, comprised of approximately \$32.6 million held in connection with repurchase borrowings and approximately \$22.8 million held by our interest rate swap counterparties. At December 31, 2013, Due to counterparties on our Consolidated Balance Sheets was comprised of approximately \$3.2 million posted with us by our repurchase agreement counterparties and approximately \$62.7 million posted by our interest rate swap and swaption counterparties. In addition, at December 31, 2014 and December 31, 2013, we held securities of approximately \$530 thousand and \$0, respectively, received as collateral from our repurchase agreement counterparties to satisfy margin requirements.

We had \$166.6 million and \$0, respectively of unsettled purchased securities as of December 31, 2014, and December 31, 2013, included in Investment related payables on our Consolidated Balance Sheets. In addition, we had \$162.8 million and \$0 of unsettled sold securities as of December 31, 2014, and December 31, 2013, included in Investment related receivables on our Consolidated Balance Sheets.

#### *Cash Generated from Operations*

For the year ended December 31, 2014, operating activities increased our cash balance by approximately \$107.5 million. This was primarily attributable to the net interest income we earned on our investments for the year net of adjustments pertaining to the amortization/accretion of premiums and discounts, which are non-cash items. For the year ended December 31, 2013, operating activities increased our cash balance by approximately \$179.3 million. This was primarily attributable to the net interest income we earned on our investments for the year net of adjustments pertaining to the amortization/accretion of premiums and discounts, which are non-cash items, and cash received on termination of interest rate swaps. For the period from May 15, 2012 (commencement of operations) through December 31, 2012, operating activities increased our cash balance by approximately \$33.5 million. This was attributable to the net interest income we earned on our investments, offset by an increase in accrued interest receivable and adjustments pertaining to the amortization/accretion of premiums and discounts, which are non-cash items.

#### *Cash Provided by and Used in Investing Activities*

For the year ended December 31, 2014, our investing activities decreased our cash balance by approximately \$1.3 billion. This was primarily attributable to our cash expenditures to acquire MBS and other securities, partially offset by proceeds from sales of MBS and other securities and by our receipt of principal payments on MBS and other securities. For the year ended December 31, 2013, our investing activities increased our cash balance by approximately \$2.0 billion. This was primarily attributable to our receipt of principal payments on MBS and proceeds received from sales of MBS, reduced by our purchases of MBS. For the period from May 15, 2012 (commencement of operations) through December 31, 2012, investing activities decreased our cash balance by approximately \$5.2 billion. This was primarily attributable to our cash expenditures to acquire MBS, offset by proceeds from sales of MBS.

### Cash Provided by and Used in Financing Activities

For the year ended December 31, 2014, our financing activities increased our cash balance by approximately \$1.2 billion. This was primarily attributable to an increase in our net borrowings under repurchase agreements and the proceeds of a stock offering. For the year ended December 31, 2013, our financing activities decreased our cash balance by approximately \$2.2 billion. This was primarily attributable to the decrease in our net borrowings under repurchase agreements from approximately \$4.8 billion at December 31, 2012 to approximately \$2.6 billion at December 31, 2013. For the period from May 15, 2012 (commencement of operations) through December 31, 2012, financing activities increased our cash balance by approximately \$5.2 billion. This was primarily attributable to an increase in our net borrowings under repurchase agreements and the cash generated from our initial public offering, concurrent private placement and follow-on public offering.

### Other Potential Sources of Financing

We held cash of approximately \$47.2 million, \$48.5 million and \$56.3 million at December 31, 2014, December 31, 2013 and 2012, respectively. Our primary sources of cash currently consist of repurchase facility borrowings, investment income, principal repayments and the proceeds of any future securities offering, to the extent available in the capital market. In the future, we expect our primary sources of liquidity to consist of payments of principal and interest we receive on our portfolio of assets, unused borrowing capacity under our financing sources and future issuances of equity and debt securities.

To maintain our qualification as a REIT under the Code, we must distribute annually at least 90% of our taxable income, exclusive of undistributed taxable income retained by our TRS. This distribution requirement limits our ability to retain earnings and thereby replenish or increase capital for operations. We believe that our significant capital resources and access to financing will provide us with financial flexibility at levels sufficient to meet current and anticipated capital requirements, including funding new investment opportunities, paying distributions to our stockholders and servicing our debt obligations.

### Contractual Obligations and Commitments

Our contractual obligations as of December 31, 2014 are as follows (dollars in thousands):

	Less than 1 year	1 to 3 years	3 to 5 years	More than 5 years	Total
Borrowings under repurchase agreements (including linked transactions) . . . . .	\$3,907,578	—	—	—	\$3,907,578
Investment related payables . . . . .	166,608	—	—	—	166,608
TBA—long positions . . . . .	3,081,172	—	—	—	3,081,172
Total: Non-GAAP Basis—Including Linked Transactions . . . . .	<u>7,155,358</u>	<u>—</u>	<u>—</u>	<u>—</u>	<u>7,155,358</u>
Linked Transactions . . . . .	31,857	—	—	—	31,857
TBA—long positions . . . . .	3,081,172	—	—	—	3,081,172
Total: GAAP Basis—Excluding Linked Transactions and TBA—long positions . . . . .	<u>\$4,042,329</u>	<u>—</u>	<u>—</u>	<u>—</u>	<u>\$4,042,329</u>

We enter into a linked transaction when the initial transfer of a financial asset and repurchase financing are entered into contemporaneously with, or in contemplation of, one another. In this situation, we then record the initial transfer and repurchase financing on a net basis. The fair value of linked transactions reflects the value of the underlying securities and linked repurchase agreement borrowings; resulting in an embedded repurchase agreement. As of December 31, 2014, we had five linked transactions resulting in approximately \$31.9 million of embedded repurchase agreements with a weighted average rate of 1.88%. The weighted average contractual maturity of the repurchase agreements for linked transactions was 12 days.

As of December 31, 2014, we have an obligation for approximately \$6.1 million in contractual interest payments related to our repurchase agreements, including linked transactions of approximately \$114 thousand through the respective maturity date of each repurchase agreement. In addition, at December 31, 2014, we had entered into repurchase agreement borrowings of approximately \$69.2 million, which settled between January 2, 2015 and January 5, 2015, with a weighted average interest rate of 1.35%, a weighted average contractual maturity of 67 days and secured by collateral of approximately \$104.0 million.

The table above does not include amounts due under the Management Agreement (as defined herein) with our Manager, as those obligations do not have fixed and determinable payments. For a description of the Management Agreement, see “Our Manager and the Management Agreement—the Management Agreement.”

On May 9, 2012, we entered into a management agreement (the “Management Agreement”) with our Manager which describes the services to be provided by our Manager and compensation for such services. Our Manager is responsible for managing our operations, including: (i) performing all of our day-to-day functions; (ii) determining investment criteria in conjunction with our Board of Directors; (iii) sourcing, analyzing and executing investments, asset sales and financings; (iv) performing asset management duties; and (v) performing financial and accounting management, subject to the direction and oversight of our Board of Directors. Pursuant to the terms of the Management Agreement, our Manager is paid a management fee equal to 1.50% per annum of our stockholders’ equity, (as defined in the Management Agreement), calculated and payable (in cash) quarterly in arrears. For purposes of calculating the management fee, “stockholders’ equity” means the sum of the net proceeds from any issuances of our equity securities since inception (allocated on a pro rata daily basis for such issuances during the fiscal quarter of any such issuance), plus retained earnings, calculated in accordance with GAAP, at the end of the most recently completed fiscal quarter (without taking into account any non-cash equity compensation expense incurred in current or prior periods), less any amount paid for repurchases of our shares of common stock, excluding any unrealized gains, losses or other non-cash items, including OTTI charges included in other loss on MBS and other securities, unrealized gain (loss) on MBS and other securities and the non-cash portion of gain (loss) on derivative instruments, that have impacted stockholders’ equity as reported in our consolidated financial statements prepared in accordance with GAAP, regardless of whether such items are included in other comprehensive income or loss, or in net income, and excluding one-time events pursuant to changes in GAAP and certain other non-cash charges after discussions between our Manager and our independent directors and after approval by at least two thirds (2/3) of our independent directors. However, if our stockholders’ equity for any given quarter is negative based on the calculation described above, our Manager will not be entitled to receive any management fee for that quarter.

In addition, under the Management Agreement, we are required to reimburse our Manager for the expenses described below. Expense reimbursements to the Manager are made in cash on a regular basis. Our reimbursement obligation is not subject to any dollar limitation. Because our Manager's personnel perform certain legal, accounting, due diligence tasks and other services that outside professionals or outside consultants otherwise would perform, our Manager may be paid or reimbursed for the documented cost of performing such tasks, provided that such costs and reimbursements are in amounts which are no greater than those which would be payable to outside professionals or consultants engaged to perform such services pursuant to agreements negotiated on an arm's-length basis. We also reimburse our Manager for certain direct costs, such as the travel expenses of our officers, incurred by the Manager on our behalf. Commencing January 1, 2014, our chief financial officer is now an employee of the Manager. Accordingly, we reimburse our Manager for his compensation and benefits as well as the compensation and benefits provided to our controller. For the year ended December 31, 2014, we recorded expenses, paid by the Manager on our behalf, totaling approximately \$624 thousand related to employee costs and benefits associated with our chief financial officer and controller, and approximately \$76 thousand for the year ended December 31, 2013.

The Management Agreement may be amended, supplemented or modified by agreement between our Manager and us. The initial term of the Management Agreement expires on May 15, 2015 and it is automatically renewed for one-year terms on each anniversary thereafter unless previously terminated as described below. Our independent directors will review the Manager's performance and any fees payable to the Manager annually and, following the initial term, the Management Agreement may be terminated annually upon the affirmative vote of at least two thirds (2/3) of our independent directors, based upon: (i) our Manager's unsatisfactory performance that is materially detrimental to us; or (ii) our determination that any fees payable to our Manager are not fair, subject to our Manager's right to prevent such termination due to unfair fees by accepting a reduction of management fees agreed to by at least two thirds (2/3) of our independent directors. We will provide our Manager 180 days prior notice of any such termination. Unless terminated for cause, we will pay the Manager a termination fee equal to three times the average annual management fee earned by the Manager during the prior 24-month period immediately preceding the date of termination, calculated as of the end of the most recently completed fiscal quarter prior to the date of termination. Pursuant to the terms of the Management Agreement, it has been extended for one year to May 15, 2016.

We may also terminate the Management Agreement at any time, including during the initial term, without the payment of any termination fee, with 30 days prior written notice from our Board of Directors for cause, which will be determined by at least two thirds (2/3) of our independent directors, which is defined as: (i) our Manager's continued material breach of any provision of the Management Agreement (including our Manager's failure to comply with our investment guidelines); (ii) our Manager's fraud, misappropriation of funds, or embezzlement against us; (iii) the Manager's gross negligence in the performance of its duties under the Management Agreement; (iv) the occurrence of certain events with respect to the bankruptcy or insolvency of our Manager, including an order for relief in an involuntary bankruptcy case or our Manager authorizing or filing a voluntary bankruptcy petition; (v) our Manager is convicted (including a plea of *nolo contendere*) of a felony; or (vi) the dissolution of our Manager.

#### **Off-Balance Sheet Arrangements**

Our linked transactions are comprised of real estate and other securities and associated repurchase agreements. The extent to which these transactions become unlinked in the future, the underlying securities and the borrowings under repurchase agreements and associated interest income and expense will be presented on a gross basis on our Consolidated Balance Sheets and Consolidated Statement of Operations, prospectively. As of December 31, 2014, our maximum exposure to loss on linked transactions was approximately \$20.6 million. Starting in 2015, we will no longer be required to net our linked transactions and instead will report them on a gross basis, see "Recent accounting pronouncements" for details.

As of December 31, 2014, we held contracts to purchase ("long position") and sell ("short position") TBAs on a forward basis. If a counterparty to one of the TBAs that we enter into defaults on its obligations, we may not receive payments or securities due under the TBA agreement, and thus, we may lose any unrealized gain associated with that TBA transaction.

We do not have any relationships with any entities or financial partnerships, such as entities often referred to as structured investment vehicles, or special purpose or variable interest entities, established to facilitate off-balance sheet arrangements or other contractually narrow or limited purposes.

Further, we have not guaranteed any obligations of any entities or entered into any commitment to provide additional funding to any such entities.

See "Warrants" above for a description of our outstanding warrants.

#### **Dividends**

We intend to make regular quarterly dividend distributions to holders of our common stock. U.S. federal income tax law generally requires that a REIT distribute annually, in accordance with the REIT regulations, at least 90% of its REIT taxable income for the taxable year, without regard to the deduction for dividends paid and excluding net capital gains as well as undistributed taxable income retained by a TRS, and that it pay tax at regular corporate rates to the extent that it annually, in accordance with the REIT regulations, distributes less than 100% of its net taxable income. We intend to pay regular quarterly dividends to our stockholders based on our net taxable income, if and to the extent authorized by our Board of Directors. Before we pay any dividend, whether for U.S. federal income tax purposes or otherwise, we must first meet both our operating requirements and debt service on our repurchase agreements and other debts payable. If our cash available for distribution is less than our net taxable income, we could be required to sell assets or borrow funds to make cash distributions or we may make a portion of the required distribution in the form of a taxable stock distribution or distribution of debt securities.

On December 18, 2014, we declared a regular quarterly dividend of \$0.70 per common share for the quarter ended December 31, 2014. The dividend was paid on January 27, 2015 to shareholders of record as of December 29, 2014.

## Non-GAAP Financial Measures

### Total Interest Income and Net Interest Income, including Interest Income on Agency and Non-Agency Interest-Only strips accounted for as derivatives and Effective Cost of Funds

Total interest income including interest income on Agency and Non-Agency Interest-Only Strips classified as derivatives and Effective Cost of Funds for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, constitutes a Non-GAAP financial measure within the meaning of Regulation G promulgated by the SEC. We believe that the measures presented in this annual report on Form 10-K, when considered together with U.S. GAAP financial measures, provide information that is useful to investors in understanding our borrowing costs and net interest income, as viewed by us. An analysis of any Non-GAAP financial measure should be made in conjunction with results presented in accordance with GAAP.

For purposes of evaluating operating results, we believe it useful to present investors with additional information pertaining to the net interest margin generated by our portfolio. Net interest margin is gross interest, adjusted for amortization/accretion of bond premium/discount, less interest expense or financing cost. GAAP requires that certain of our Agency and Non-Agency Interest Only Strips be treated as derivatives and, accordingly, the interest income associated with these securities be included with Gain (loss) on derivative instruments, net in our Consolidated Statement of Operations. Similarly, GAAP requires that interest income on linked transactions be included in Gain (loss) on linked transactions, net in our Consolidated Statement of Operations. Accordingly, in order to determine the gross interest income generated by our IO and IIO securities which are classified as derivatives and our MBS and other securities which are classified as linked transactions, we calculate the interest income on these securities as if they were not derivatives or linked transactions.

The following table reconciles total interest income to interest income including interest income on Agency and Non-Agency Interest-Only Strips classified as derivatives and interest income on linked transactions (Non-GAAP financial measure) for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012:

(in thousands)	For the Year ended December 31, 2014	For the Year ended December 31, 2013	For the period from May 15, 2012 (commencement of operations) through December 31, 2012

Total interest income, including interest income on Agency and Non-Agency Interest-Only Strips, classified as derivatives—Non-GAAP Financial Measure . . . . .	<u>\$159,535</u>	<u>\$137,006</u>	<u>\$ 57,040</u>

- (1) Reported in gain (loss) on derivative instruments in the Consolidated Statement of Operations.  
(2) Reported in gain (loss) on linked transactions in the Consolidated Statement of Operations.

Effective Cost of Funds includes the net interest component related to our interest rate swaps and borrowings under linked transactions as well as the impact of our foreign currency swaps and forwards. While we have not elected hedge accounting for these instruments, such derivative instruments are viewed by us as an economic hedge against increases in future market interest rates on our liabilities and changes in foreign currency exchange rates on our assets and liabilities and are characterized as hedges for purposes of satisfying the REIT requirements and therefore the Effective Cost of Funds reflects interest expense adjusted to include the realized loss (i.e., the interest expense component) for all of our interest rate swaps and the impact of our foreign currency swaps and forwards. In addition, our linked transactions are comprised of real estate securities and other structured securities, associated with repurchase agreements. We view the cost of the associated repurchase agreements (interest expense) as a component of our Effective Cost of Funds.

The following table reconciles the Effective Cost of Funds (Non-GAAP financial measure) with interest expense for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012:

(dollars in thousands)	For the year ended December 31, 2014		For the year ended December 31, 2013		For the period from May 15, 2012 (commencement of operations) through December 31, 2012

#### Core Earnings

Our Core Earnings were approximately \$89.9 million, \$82.7 million and \$36.7 million for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively. Core Earnings is a Non-GAAP financial measure that is used by us to approximate cash yield or income associated with our portfolio and is defined as GAAP net income (loss) as adjusted, excluding: (i) net realized gain (loss) on investments and termination of derivative contracts; (ii) net unrealized gain (loss) on investments; (iii) net gain (loss) resulting from mark-to-market adjustments on derivative contracts; (iv) other loss on MBS and other securities; (v) non-cash stock-based compensation expense; and (vi) one-time events pursuant to changes in GAAP and certain other non-cash charges after discussions between the us, the Manager and our independent directors and after approval by a majority of the our independent directors.

In order to evaluate the effective yield of the portfolio, we use Core Earnings to reflect the net investment income of our portfolio as adjusted to reflect the net interest rate swap interest income (expense). Core Earnings allows us to isolate the interest income (expense) associated with our interest rate swaps in order to monitor and project our borrowing costs and interest rate spread. In addition, we utilize Core Earnings as a key metric in conjunction with other portfolio and market factors to determine the appropriate leverage and hedge ratios, as well as the overall structure of the portfolio. We also believe that our investors use Core Earnings or a comparable supplemental performance measure to evaluate and compare our performance and our peers, and as such, we believe that the disclosure of Core Earnings is useful to our investors.

Our presentation of Core Earnings may not be comparable to similarly-titled measures of other companies, who may use different calculations. As a result, Core Earnings should not be considered as a substitute for our GAAP net income as a measure of our financial performance or any measure of our liquidity under GAAP.

The table below reconciles Net Income (Loss) to Core Earnings for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012:

(dollars in thousands)	For the year ended December 31, 2014	For the year ended December 31, 2013	For the period from May 15, 2012 (commencement of operations) through December 31, 2012
Net Income (loss)—GAAP . . . . .	\$ 100,713	\$ (27,855)	\$ 57,277
Adjustments:			
<i>MBS and other securities:</i>			
Unrealized (gain) loss on MBS, other securities and whole-loans . . . . .	(189,011)	160,109	(13,930)

Alternatively, our Core Earnings can also be derived as presented in the table below by starting with Net interest income including interest income on Interest-Only Strips accounted for as derivatives and interest income (expense), net incurred on interest rate swaps and foreign currency swaps and forwards (a Non-GAAP financial measure) subtracting Operating Expenses, net of Non-cash stock based compensation, and adding Interest income on cash balances and other income (loss), net:

(dollars in thousands)	For the year ended December 31, 2014	For the year ended December 31, 2013	For the period from May 15, 2012 (commencement of operations) through December 31, 2012
Net interest income including interest income on Interest-Only Strips accounted for as derivatives and interest income (expense), net incurred on interest rate swaps and foreign currency swaps (a Non-GAAP financial measure) . . . . .	\$106,780	\$ 95,784	\$42,625
Total Operating Expenses . . . . .	(18,760)	(14,260)	(6,330)
Non-cash stock based compensation . . . . .	2,203	1,087	367
Interest income on cash balances and other income (loss), net . . . . .	(292)	91	11
Core Earnings (a Non-GAAP) financial measure	<u>\$ 88,931</u>	<u>\$ 82,702</u>	<u>\$36,673</u>

As discussed further in Note 2—Revision of Previously Issued Financial Statements for Errors Affecting Certain Items Presented in the Statements of Cash Flows and Notes to Financial Statements, we have elected to revise our presentation of Core Earnings for the three and six months ended June 30, 2014 and for the three and nine months ended September 30, 2014 when they are next filed in our quarterly financial statements on Form 10-Q for the quarters ending June 30, 2015 and September 30, 2015 to correct these errors.

The effect of these errors on the reconciliation of Net Income (Loss) to Core Earnings for the three and six months ended June 30, 2014 and for the three and nine months ended September 30, 2014:

(dollars in thousands)	As Originally Reported For the three months ended June 30, 2014	Adjustments For the three months ended June 30, 2014	Revised For the three months ended June 30, 2014

**ITEM 7A. Quantitative and Qualitative Disclosures about Market Risk.**

We seek to manage the risks related to the credit quality of our assets, interest rates, liquidity, prepayment speeds and market values while, at the same time, seeking to provide an opportunity to stockholders to realize attractive risk-adjusted returns from our assets through ownership of our common stock. While we do not seek to avoid risk completely, our Manager seeks to actively manage risk for us, to earn sufficient compensation to justify taking those risks and to maintain capital levels consistent with the risks we undertake.

**Credit Risk**

We are subject to varying degrees of credit risk in connection with our assets. Although we do not expect to encounter credit risk in our Agency MBS and U.S. Treasury securities, we do expect to encounter credit risk related to Non-Agency MBS and Non-Agency CMBS and other portfolio investments. Investment decisions are made following a bottom-up credit analysis and specific risk assumptions. As part of the risk management process, our Manager uses detailed proprietary models, applicable to evaluate, depending on the asset class, house price appreciation and depreciation by region, prepayment speeds and foreclosure/default frequency, cost and timing. If our Manager determines that the proposed investment can meet the appropriate risk and return criteria as well as complement our existing asset portfolio, the investment will undergo a more thorough analysis.

As of December 31, 2014, 19 of the counterparties that we had outstanding repurchase agreement borrowings held collateral which we posted as security for such borrowings in excess of 5% of our Stockholders' equity. Prior to entering into a repurchase agreement with any particular institution, our Manager does a thorough review of such potential counterparty. Such review, however, does not assure the creditworthiness of such counterparty nor that the financial wherewithal of the counterparty will not deteriorate in the future.

**Interest Rate Risk**

Interest rates are highly sensitive to many factors, including fiscal and monetary policies and domestic and international economic and political considerations, as well as other factors beyond our control. We are subject to interest rate risk in connection with our assets and our related financing obligations. In general, we expect to finance the acquisition of our assets through financings in the form of repurchase agreements, warehouse facilities, securitizations, resecuritizations, bank credit facilities (including term loans and revolving facilities) and public and private equity and debt issuances in addition to transaction or asset specific funding arrangements. Subject to maintaining our qualification as a REIT for U.S. federal income tax purposes, we utilize derivative financial instruments to hedge the interest rate risk associated with our borrowings. We also may engage in a variety of interest rate management techniques that seek to mitigate changes in interest rates or other potential influences on the values of our assets.

**Interest Rate Effect on Net Interest Income**

Our operating results will depend in large part on differences between the income earned on our assets and our borrowing costs. The cost of our borrowings is generally based on prevailing market interest rates. During a period of rising interest rates, our borrowing costs generally will increase and the yields earned on our leveraged fixed-rate mortgage assets will remain static. Further, the cost of such financing could increase at a faster pace than the yields earned on our leveraged ARM and hybrid ARM assets. This could result in a decline in our net interest spread and net interest margin. The severity of any such decline would depend on our asset/liability composition at the time as well as the magnitude and duration of the interest rate increase. Further, an increase in short-term interest rates could also have a negative impact on the market value of our assets. If any of these events happen, we could experience a decrease in net income or incur a net loss during these periods, which could adversely affect our liquidity and results of operations.

**Interest Rate Cap Risk**

To the extent we invest in adjustable-rate RMBS, such securities are generally subject to interest rate caps, which potentially could cause such RMBS to acquire many of the characteristics of fixed-rate securities if interest rates were to rise above the cap levels. This issue is magnified to the extent we acquire ARM and hybrid ARM assets that are not based on mortgages which are fully indexed. In addition, ARM and hybrid ARM assets may be subject to periodic payment caps that result in some portion of the interest being deferred and added to the principal outstanding or a portion of the incremental interest rate increase being deferred. To the extent we invest in such ARM and/or hybrid ARM assets, we could potentially receive less cash income on such assets than we would need to pay the interest cost on our related borrowings. To mitigate interest rate mismatches, we may utilize the hedging strategies discussed above under "Interest Rate Risk."

**Interest Rate Effects on Fair value**

Another component of interest rate risk is the effect that changes in interest rates will have on the market value of the assets that we acquire. We face the risk that the market value of our assets will increase or decrease at different rates than those of our liabilities, including our hedging instruments. See "Market Risk" below.

The impact of changing interest rates on fair value can change significantly when interest rates change materially. Therefore, the volatility in the fair value of our assets could increase significantly in the event interest rates change materially. In addition, other factors impact the fair value of our interest rate-sensitive investments and hedging instruments, such as the shape of the yield curve, market expectations as to future interest rate changes and other market conditions. Accordingly, changes in actual interest rates may have a material adverse effect on us.

#### Market Risk

*Market value risk.* Our MBS and other securities are reflected at their fair value with unrealized gains and losses included in earnings. The fair value of these securities fluctuates primarily due to changes in interest rates and other factors. Generally, in a rising interest rate environment, the fair value of these securities would be expected to decrease; conversely, in a decreasing interest rate environment, the fair value of these securities would be expected to increase.

The sensitivity analysis table presented below shows the estimated impact of an instantaneous parallel shift in the yield curve, up and down 50 and 100 basis points, on the market value of our interest rate-sensitive investments, including interest rate swaps, Interest-Only Strips, and net interest income at December 31, 2014, assuming a static portfolio of assets. When evaluating the impact of changes in interest rates, prepayment assumptions and principal reinvestment rates are adjusted based on our Manager's expectations. The analysis presented utilizes our Manager's assumptions, models and estimates, which are based on our Manager's judgment and experience.

Change in Interest Rates	Percentage Change in Projected Net Interest Income	Percentage Change in Projected Portfolio Value
+1.00 %	14.18%	(1.74)%
+0.50 %	9.55%	(0.71)%
-0.50%	(16.21)%	0.16%
-1.00%	NA(1)	NA(1)

(1) Not applicable, borrowing rate is below zero.

(2) Includes linked real estate securities that are reported as a component of linked transactions in our consolidated balance sheets. Such securities may not be linked in future periods.

While the table above reflects the estimated immediate impact of interest rate increases and decreases on a static portfolio, we may rebalance our portfolio from time to time either to seek to take advantage of or reduce the impact of changes in interest rates. It is important to note that the impact of changing interest rates on market value and net interest income can change significantly when interest rates change beyond 100 basis points from current levels. Therefore, the volatility in the market value of our assets could increase significantly when interest rates change beyond amounts shown in the table above. In addition, other factors impact the market value of and net interest income from our interest rate-sensitive investments and derivative instruments, such as the shape of the yield curve, market expectations as to future interest rate changes and other market conditions. Accordingly, interest income would likely differ from that shown above and such difference might be material and adverse to our stockholders.

Certain assumptions have been made in connection with the calculation of the information set forth in the table above and, as such, there can be no assurance that assumed events will occur or that other events will not occur that would affect the outcomes. The base interest rate scenario assumes interest rates at December 31, 2014. The analysis presented utilizes assumptions and estimates based on our Manager's judgment and experience. Furthermore, while we generally expect to retain such assets and the associated interest rate risk, future purchases and sales of assets could materially change our interest rate risk profile.

#### Prepayment Risk

The value of our Agency and Non-Agency RMBS may be affected by prepayment rates on the underlying residential mortgage loans. We acquire RMBS and anticipate that the underlying residential mortgages loans will prepay at a projected rate generating an expected yield. If we purchase assets at a premium to par value, when borrowers prepay their residential mortgage loans faster than expected, the corresponding prepayments on the mortgage-related securities may reduce the expected yield on such securities because we will have to amortize the related premium on an accelerated basis and, in the case of Agency RMBS, other interest-only strips, and certain other investment grade rated securities, will have to make a retrospective adjustment to historical amortization. Conversely, if we purchase assets at a discount to par value, when borrowers prepay their residential mortgage loans slower than expected, the decrease in corresponding prepayments on the RMBS may reduce the expected yield on such securities because we will not be able to accrete the related discount as quickly as originally anticipated and, in the case of Agency RMBS, other than interest-only strips, and certain other investment grade rated securities, will have to make a retrospective adjustment to historical amortization.

The value of our Agency and Non-Agency CMBS will also be affected by prepayment rates, however, commercial mortgages frequently limit the ability of the borrower to prepay, thereby providing a certain level of prepayment protection. Common restrictions include yield maintenance and prepayment penalties, the proceeds of which are generally at least partially allocable to these securities, as well as defeasance.

Likewise, the value of our ABS and other structured securities will also be affected prepayment rates. The collateral underlying such securities may, similar to most residential mortgages, allow the borrower to prepay at any time or, similar to commercial mortgages, limit the ability of the borrower to prepay by imposing lock-out provisions, prepayment penalties and/or make whole provisions.

#### Extension Risk

Most residential mortgage loans do not prohibit the partial or full prepayment of principal outstanding. Accordingly, while the stated maturity of a residential mortgage loan may be 30 years, or in some cases even longer, historically the vast majority of residential mortgage loans are satisfied prior to their maturity date. In periods of rising interest rates, borrowers have less incentive to refinance their existing mortgages and mortgage financing may not be as readily available. This generally results in a slower rate of prepayments and a corresponding longer weighted average life for RMBS. The increase, or extension, in weighted average life is commonly referred to as "Extension Risk" which can negatively impact our portfolio. To the extent we receive smaller pre-payments of principal; we will have less to capital to invest in new securities. This is extremely detrimental in periods of rising interest rates as we will be unable to invest in new higher coupon securities and a larger portion of our portfolio will remain invested in lower coupon securities. Further, our borrowing costs are generally short-term and, even if hedged, are likely to increase in a rising interest rate environment, thereby reducing our net interest margin. Finally, to the extent we acquired securities at a discount to par, a portion of the overall return on such securities is based on the recovery of this discount. Slower principal prepayments will result in a longer recovery period and a lower overall return on our investment.

Prepayment rates on Agency and Non-Agency CMBS are generally less volatile than RMBS as the underlying commercial mortgages usually limit the ability of the borrower to prepay the mortgage prior to maturity or a period shortly before maturity. Accordingly, extension risk for Agency and Non-Agency CMBS is generally less than RMBS as it presumed that other than defaults (i.e. involuntary prepayments), most commercial mortgages will remain outstanding for the contractual term of the mortgage.

Prepayment rates on ABS and our other structured securities will be determined by the underlying collateral. The extension risk of such securities will generally be less than RMBS, but greater than CMBS.

### **Counterparty Risk**

The following discussion on counterparty risk reflects how these transactions are structured, rather than how they are presented for financial reporting purposes.

When we engage in repurchase transactions, we generally sell securities to lenders (i.e., repurchase agreement counterparties) and receive cash from the lenders. The lenders are obligated to resell the same securities back to us at the end of the term of the transaction. Because the cash we receive from the lender when we initially sell the securities to the lender is less than the value of those securities (this difference is the haircut), if the lender defaults on its obligation to resell the same securities back to us, we could incur a loss on the transaction up to the amount of the haircut (assuming there was no change in the value of the securities).

If a counterparty to a bi-lateral interest rate swap cannot perform under the terms of the interest rate swap, we may not receive payments due under that agreement, and thus, we may lose any unrealized gain associated with the interest rate swap. We may also risk the loss of any collateral we have pledged to secure our obligations under interest rate swap if the counterparty becomes insolvent or files for bankruptcy. In the case of a cleared swap, if our clearing broker were to default, become insolvent or file for bankruptcy, we may also risk the loss of any collateral we have posted to the clearing broker unless we were able to transfer or “port” our positions and held collateral to another clearing broker. In addition, the interest rate swap would no longer mitigate the impact of changes in interest rates as intended. As of September 2013, most of our interest swaps are cleared through a central clearing house which reduces but does not eliminate the aforementioned risks. Also see “Liquidity Risk” below.

As of December 31, 2014, we have entered into master securities forward trading agreements, or MSFTAs, which may govern the trading of some or all TBA transactions. Pursuant to the terms of these MSFTAs, we and our counterparties would be required to post margin to the other when the mark to market exposure of the TBA transactions executed under the agreement exceed certain thresholds. We expect to continue to negotiate and enter into MSFTAs with additional TBA counterparties. The margin provisions of the MSFTA help to mitigate, but do not eliminate, counterparty risk associated with TBA transactions. If a counterparty to a TBA transaction cannot perform under the terms of the trade, we may not receive securities we have agreed to purchase or payment for securities we have agreed to sell, and thus, we may lose any unrealized gain associated with such transaction.

If a counterparty to one of the TBAs that we may enter into defaults on its obligations, we may not receive payments or securities due under the TBA agreement, and thus, we may lose any unrealized gain associated with that TBA transaction.

Prior to entering into a trading agreement or transaction with any particular institution where we take on counterparty risk, our Manager does a thorough review of such potential counterparty. Such review, however, does not assure the creditworthiness of such counterparty nor that the financial wherewithal of the counterparty will not deteriorate in the future.

### **Funding Risk**

We have financed a substantial majority of our assets with repurchase agreement financing. Over time, as market conditions change, in addition to these financings, we may use other forms of leverage. Weakness in the financial markets, the residential mortgage markets, the commercial mortgage markets, the asset-backed securitization markets and the economy generally could adversely affect one or more of our potential lenders and could cause one or more of our potential lenders to be unwilling or unable to provide us with financing or to increase the costs of that financing.

### **Liquidity Risk**

Our liquidity risk is principally associated with the financing of long-maturity assets with short-term borrowings in the form of repurchase agreements. Although the interest rate adjustments of these assets and liabilities fall within the guidelines established by our operating policies, maturities are not required to be, nor are they, matched.

Should the value of our assets pledged as collateral suddenly decrease, margin calls relating to our repurchase agreements could increase, causing an adverse change in our liquidity position. Our inability to post adequate collateral for a margin call by the counterparty could result in a condition of default under our repurchase agreements, thereby enabling the counterparty to liquidate the collateral pledged by us, which may have a material adverse consequence on our business and results of operations.

In an instance of severe volatility, or where the additional stress on liquidity resulting from volatility is sustained over an extended period of time, we could be required to sell securities, possibly even at a loss to generate sufficient liquidity to satisfy collateral and margin requirements which could have a material adverse effect on our financial position, results of operations and cash flows.

Additionally, if one or more of our repurchase agreement counterparties chose not to provide on-going funding, our ability to finance would decline or exist at possibly less advantageous terms. Further, if we are unable to renew, replace or expand repurchase financing with other sources of financing on substantially similar terms, it may have a material adverse effect on our business, financial position, results of operations and cash flows, due to the long term nature of our investments and relatively short-term maturities of our repurchase agreements. As such, there is no assurance that we will always be able to roll over our repurchase agreements.

The costs associated with our borrowings are generally based on prevailing market interest rates. During a period of rising interest rates, our borrowing costs generally will increase while the yields earned on our existing portfolio of leveraged fixed-rate MBS and other fixed rate securities will remain static. Further, certain of our floating rate securities may contain annual or lifetime interest rate caps as well as limit the frequency or timing of changes to the underlying interest rate index. This could result in a decline in our net interest spread and net interest margin. The severity of any such decline would depend on our asset/liability composition at the time, as well as the magnitude and duration of the interest rate increase. Further, an increase in short-term interest rates could also have a negative impact on the market value of our assets. If any of these events happen, we could experience a decrease in net income or incur a net loss during these periods, which could have a material adverse effect on our liquidity and results of operations.

In addition, the assets that comprise our asset portfolio are not traded on a public exchange. A portion of these assets may be subject to legal and other restrictions on resale or will otherwise be less liquid than publicly-traded securities. The illiquidity of our assets may make it difficult for us to sell such assets if the need or desire arises, including in response to changes in economic and other conditions. Recent regulatory changes have imposed new capital requirements and other restrictions on banks and other market intermediaries’ ability and desire to hold securities on their balance sheets and otherwise make markets in fixed income securities resulting in reduced liquidity in many sectors of the market. This regulatory trend is expected to continue. As a result of these developments it may become increasingly difficult for us to sell securities in the market, especially in credit oriented sectors such as Non-Agency RMBS and CMBS.

We enter into swaps to manage our interest rate risk. We are required to pledge cash or securities as collateral as part of a margin arrangement, calculated daily, in connection with the swaps. The amount of margin that we are required to post will vary and generally reflects collateral posted with respect to swaps that are in an unrealized loss position to us and a percentage of the aggregate notional amount of swaps per counterparty. Margin calls could adversely affect our liquidity. Our inability to post adequate collateral for a margin call could result in a condition of default under our repurchase agreements, thereby resulting in liquidation of the collateral pledged by us, which may have a material adverse consequence on our business, financial position, results of operations and cash flows. Conversely, if our swaps are in an unrealized gain position, our counterparties to bilateral swaps are required to post collateral with us, under the same terms that we post collateral with them. On occasion we may enter into a MAC interest rate swap in which we may receive or make a payment at the time of entering such interest rate swap to compensate for the out of the market nature of such interest rate swap. Similar to all other interest rate swaps, these interest rate swaps are also subject to margin requirements previously described.

#### ***Inflation***

Virtually all of our assets and liabilities are interest rate sensitive in nature. As a result, interest rates and other factors influence our performance far more so than does inflation. Changes in interest rates do not necessarily directly correlate with inflation rates or changes in inflation rates. Our consolidated financial statements are prepared in accordance with GAAP and our distributions will be determined by our Board of Directors consistent with our obligation to distribute to our stockholders at least 90% of our net taxable income on an annual basis, in accordance with the REIT regulations, in order to maintain our REIT qualification. In each case, our activities and consolidated balance sheets are measured with reference to historical cost and/or fair market value without considering inflation.

#### ***Foreign Investment risk***

During 2014, we invested in two Non U.S. CMBS transactions and, in the future, we may make other investments in non U.S. issuers and transactions. These investments present certain unique risks, including those resulting from future political, legal, and economic developments, which could include favorable or unfavorable changes in currency exchange rates, exchange control regulations (including currency blockage), expropriation, nationalization, or confiscatory taxation of assets, adverse changes in investment capital or exchange control regulations (which may include suspension of the ability to transfer currency from a country), political changes, diplomatic developments, difficulty in obtaining and enforcing judgments against non U.S. entities, the possible imposition of the applicable country's governmental laws or restrictions, and the reduced availability of public information concerning issuers. In the event of a nationalization, expropriation, or other confiscation of assets, the Company could lose its entire investment in a security. Legal remedies available to investors in certain jurisdictions may be more limited than those available to investors in the United States. Issuers of non U.S. securities may not be subject to the same degree of regulation as U.S. issuers.

Furthermore, non U.S. issuers are not generally subject to uniform accounting, auditing, and financial reporting standards or other regulatory practices and requirements comparable to those applicable to U.S. issuers. There is generally less government supervision and regulation of non U.S. exchanges, brokers, and issuers than there is in the United States, and there is greater difficulty in taking appropriate legal action in Non U.S. courts. There are also special tax considerations that apply to securities of non U.S. issuers and securities principally traded overseas.

To the extent that our investments are denominated in U.S. dollars, the investment is not affected directly by changes in currency exchange rates relative to the dollar and exchange control regulations. We are, however, subject to currency risk with respect to such investments to the extent that a decline in a non U.S. issuer's or borrower's own currency relative to the dollar may impair such issuer's or borrower's ability to make timely payments of principal and/or interest on a loan or other debt security. To the extent that our investments are in non-dollar denominated securities, the value of the investment and the net investment income available for distribution may be affected favorably or unfavorably by changes in currency exchange rates relative to the dollar and exchange control regulations.

Currency exchange rates can be volatile and affected by, among other factors, the general economics of a country, the actions of governments or central banks and the imposition of currency controls and speculation. In addition, a security may be denominated in a currency that is different from the currency where the issuer is domiciled.

#### ***Currency Risk***

We have and may continue in the future to invest in securities which are denominated in a currency other than U.S. dollars and may finance such investments with repurchase financing or other forms of financing which may also be denominated in a currency other than U.S. dollars. To the extent we make such investments and/or enter into such financing arrangements, we may utilize foreign currency swaps, forwards or other derivative instruments to hedge our exposure to foreign currency risk. Despite being economic hedges, we have elected not to treat such derivative instruments as hedges for accounting purposes and therefore the changes in the value of such instruments, including actual and accrued payments, will be included in our Consolidated Statement of Operations. While such transactions are entered into in an effort to minimize our foreign currency risk, there can be no assurance that they perform as expected. If actual prepayments of the foreign denominated security are faster, or slower, than expected, the hedge instrument is unlikely to fully protect us from changes in the valuation of such foreign currency. Further, as with interest rate swaps, there is counterparty risk associated with the future creditworthiness of such counterparty.

Financial Statements Schedules other than the one listed above are omitted because the required information is not applicable or deemed not material, or the required information is presented in the financial statements and/or in the notes to financial statements.

**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Shareholders  
of Western Asset Mortgage Capital Corporation:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of Western Asset Mortgage Capital Corporation and subsidiaries (the "Company") at December 31, 2014 and December 31, 2013, and the results of their operations and their cash flows for the years ended December 31, 2014 and December 31, 2013 and the period from May 15, 2012 (commencement of operations) through December 31, 2012 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the accompanying index presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements**  
**(in thousands—except share and per share data)**

*The following defines certain of the commonly used terms in these Notes to Consolidated Financial Statements: “Agency” or “Agencies” refer to a federally chartered corporation, such as the Federal National Mortgage Association (“Fannie Mae” or “FNMA”) or the Federal Home Loan Mortgage Corporation (“Freddie Mac” or “FHLMC”), or an agency of the U.S. Government, such as the Government National Mortgage Association (“Ginnie Mae” or “GNMA”); references to “MBS” refer to mortgage backed securities, including residential mortgage-backed securities or “RMBS”, commercial mortgage-backed securities or “CMBS”, and “Interest-Only Strips” (as defined herein); “Agency MBS” refer to RMBS, CMBS and Interest-Only Strips issued or guaranteed by the Agencies while “Non-Agency MBS” refer to RMBS, CMBS and Interest-Only Strips that are not issued or guaranteed by the Agencies; references to “ARMs” refers to adjustable rate mortgages; references to “Interest-Only Strips” refer to interest-only (“IO”) and inverse interest-only (“IIO”) securities issued as part of or collateralized with MBS.*

**Note 1—Organization**

Western Asset Mortgage Capital Corporation and Subsidiaries (is referred to throughout this report as the “Company”) is a real estate finance company. At the Company’s launch in May 2012, its initial investment strategy focused primarily on Agency RMBS (including TBAs as defined herein). Over time, the Company expanded its investment strategy to include Non-Agency RMBS and subsequently, Agency and Non-Agency CMBS, including Non U.S. CMBS. In addition, and to a significantly lesser extent, the Company has invested in other securities including certain Agency obligations that are not technically MBS and in asset backed securities (“ABS”). The Company’s Manager, as defined below, is also actively pursuing investing in whole-loans or whole-loan securities as set forth in more detail herein and completed its first purchase of these instruments during the quarter ended December 31, 2014. These changes in the Company’s investment strategy, including future changes, are based on the Manager’s perspective of which mix of portfolio assets it believes provide the Company with the best risk-reward opportunities at any given time.

The Company is externally managed by Western Asset Management Company (“WAM”, or the “Manager”), an investment advisor registered with the Securities and Exchange Commission (“SEC”). WAM is a wholly-owned subsidiary of Legg Mason, Inc. The Company operates and has elected to be taxed as a real estate investment trust or “REIT” commencing with its taxable year ended December 31, 2012.

In light of the aforementioned developments and given the Manager’s current market outlook and investment view, while it can be expected that Agency RMBS will continue to be a significant part of the Company’s portfolio, Agency RMBS will not necessarily be our primary investment in the future. Going forward, the Manager may vary the allocation among various asset classes subject to maintaining the Company’s qualification as a REIT and maintaining its exemption from the Investment Company Act of 1940 (the “1940 Act”). These restrictions limit the Company’s ability to invest in non-real estate assets and/or assets which are not secured by real estate. Accordingly, the Company’s portfolio will continue to be principally invested in MBS and other real estate related assets.

**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 2—Revision of Previously Issued Financial Statements for Errors Affecting Certain Items Presented in the Statements of Cash Flows and Notes to Financial Statements**

During the process of preparing the Company’s 2014 financial statements, the Company discovered that the treatment of premiums received on the market agreed coupon (“MAC”) interest rate swaps and treatment of proceeds and repayment on rehypothecation of non-cash collateral in its Statements of Cash Flows and a voluntary disclosure surrounding the breakdown between realized and unrealized portion of the change in fair value for derivative instrument were not presented in accordance with GAAP. The Company has evaluated the impact of these errors and has concluded that individually and in the aggregate, these errors were not material to any previously issued financial statements. However, the Company has elected to revise the Statements of Cash Flows for the six months ended June 30, 2014 and for the nine months ended September 30, 2014 and the voluntary disclosure for the three and six months ended June 30, 2014 and for the three and nine months ended September 30, 2014 when they are next filed in the Company’s quarterly financial statements on Form 10-Q for the quarters ending June 30, 2015 and September 30, 2015 to correct these errors. The corrections resulted in a reclassification of premiums received and periodic interest payments on interest rate swaps previously reported in cash flows from operating activities and the reclassification of proceeds and repayment on rehypothecation of non-cash collateral previously reported as repurchase agreement proceeds and repayments (as indicated in the tables below). In accordance with the Company’s accounting policies, proceeds and repayment on rehypothecation of non-cash collateral is reported on a net basis in Due to counterparties, net. These revisions had no effect on net income, shareholders’ equity, net change in cash, or total assets, of the Company reported for these periods.

Western Asset Mortgage Capital Corporation and Subsidiaries  
Notes to Consolidated Financial Statements (Continued)  
(in thousands—except share and per share data)

**Note 3—Summary of Significant Accounting Policies**

**Basis of Presentation and Consolidation**

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America (“GAAP”) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ from those estimates.

The consolidated financial statements include the Company’s accounts and those of its consolidated subsidiary. The consolidated financial statements also include the consolidation of a trust that meets the definition of a variable interest entity (“VIE”) related to the acquisition of residential whole-loans in which the Company has been deemed itself to be the primary beneficiary of the trust. The trust has issued trust certificates to the Company which are collateralized by pools of residential mortgage loans held by the trust. The Company includes the underlying residential mortgage loans owned by the trusts in Residential whole-loans at fair value on the Consolidated Balance Sheets and has eliminated the intercompany trust certificates in consolidation. The Company records interest income earned on the residential whole-loans in Interest Income on the Consolidated Statements of Operations. The Company records the initial underlying assets and liabilities of the consolidated trusts at their fair value upon consolidation into the Company and, as such, a gain or loss would be recorded upon consolidation if appropriate. Upon consolidation of the VIE during 2014, the Company recorded no gain or loss upon consolidation. Refer to Note 6—“Variable Interest Entities” for additional information regarding the impact of consolidation of trusts. All intercompany amounts between the Company and its subsidiary and consolidated trusts have been eliminated in consolidation.

The Company currently operates as one business segment.

**Cash and Cash Equivalents**

The Company considers all highly-liquid short term investments with original maturities of 90 days or less when purchased to be cash equivalents. Cash and cash equivalents are exposed to concentrations of credit risk. The Company places its cash and cash equivalents with what it believes to be high credit quality institutions. At times such investments may be in excess of the Federal Deposit Insurance Corporation insurance limit.

**Classification of mortgage-backed securities, other securities and residential whole-loans and valuations of financial instruments**

**Mortgage-backed securities, other securities and residential whole-loans—Fair value election**

The Company has elected the fair value option for all of its MBS, other securities and residential whole-loans at the date of purchase, which permits the Company to measure these securities and whole-loans at fair value with the change in fair value included as a component of earnings. In the Manager’s view, this election more appropriately reflects the results of the Company’s operations for a particular reporting period, as financial asset fair value changes are presented in a manner consistent with the presentation and timing of the fair value changes of economic hedging instruments.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

***Balance Sheet Presentation***

The Company's mortgage-backed securities and other securities purchases and sales are recorded on the trade date, which results in an investment related payable (receivable) for MBS and other securities purchased (sold) for which settlement has not taken place as of the balance sheet date. In addition, the Company's TBAs, as defined herein, which matured but have not settled as of the balance sheet date result in an investment related payable (receivable). The Company's MBS and other securities are pledged as collateral against borrowings under repurchase agreements. Other than MBS and other securities which are accounted for as linked transactions, described below, the Company's MBS and other securities are included in Mortgage-backed securities and other securities at fair value and Investment related receivables on the Consolidated Balance Sheets, with the fair value of such MBS and other securities pledged disclosed parenthetically. Residential whole-loans purchases and sales are recorded on the settlement date and are included in Residential whole-loans at fair value on the Consolidated Balance Sheets.

***Valuation of financial instruments***

The Company discloses the fair value of its financial instruments according to a fair value hierarchy (Levels I, II, and III, as defined below). In accordance with GAAP, the Company is required to provide enhanced disclosures regarding instruments in the Level III category (which require significant management judgment), including a separate reconciliation of the beginning and ending balances for each major category of assets and liabilities. GAAP establishes a framework for measuring fair value and expands financial statement disclosure requirements for fair value measurements. GAAP further specifies a hierarchy of valuation techniques, which is based on whether the inputs into the valuation technique are observable or unobservable. The hierarchy is as follows:

Level I—Quoted prices in active markets for identical assets or liabilities.

Level II—Quoted prices for similar assets and liabilities in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose inputs are observable or whose significant value drivers are observable.

Level III—Prices are determined using significant unobservable inputs. In situations where quoted prices or observable inputs are unavailable, for example, when there is little or no market activity for an investment at the end of the period, unobservable inputs may be used.

The level in the fair value hierarchy within which a fair value measurement in its entirety falls is based on the lowest level input that is significant to the fair value measurement in its entirety. Transfers between levels are determined by the Company at the end of the reporting period.

When available, the Company uses quoted market prices to determine the fair value of an asset or liability. If quoted market prices are not available, the Company consults with independent pricing services or obtains third party broker quotes. If independent pricing service, or third party broker quotes are not available, the Company determines the fair value of the securities using valuation techniques that use, when possible, current market-based or independently-sourced market parameters, such as interest rates and when applicable, estimates of prepayment and credit losses.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

Valuation techniques for MBS, residential whole-loans and other securities may be based upon models that consider the estimated cash flows of the security. Depending on the security and the underlying collateral, the primary inputs to the model include yields for Agency To-Be-Announced securities (also known as "TBAs"), Agency MBS, the U.S. Treasury market and floating rate indices such as the London interbank offered rate or LIBOR, the Constant Maturity Treasury rate and the prime rate as a benchmark yield. In addition, the model may incorporate the current weighted average maturity and additional pool level information such as prepayment speeds, default frequencies and default severities, if applicable. To the extent such inputs are observable and timely, these securities are categorized as Level II of the fair value hierarchy; otherwise, unless alternative pricing information as described above is available, they are categorized as Level III.

While linked transactions, described below, are treated as derivatives for GAAP, the securities underlying the Company's linked transactions are valued using similar techniques to those used for the Company's securities portfolio. The value of the underlying security is then netted against the carrying amount (which approximates fair value) of the repurchase agreement at the valuation date. Additionally, TBA instruments are similar in substance to the Company's Agency RMBS portfolio, and the Company therefore estimates fair value based on similar methods.

The Company determines the fair value of derivative financial instruments by obtaining quotes from third party pricing services, whose pricing is subject to review by the Manager's pricing committee. In valuing its over-the-counter interest rate derivatives, such as swaps and swaptions, and its currency derivatives, such as swaps and forwards, the Company considers the creditworthiness of both the Company and its counterparties, along with collateral provisions contained in each derivative agreement, from the perspective of both the Company and its counterparties. The majority of the Company's interest rate swaps are cleared through a central clearing house and subject to the clearing house margin requirements. The Company's agreements with its derivative counterparties also contain netting provisions; however the Company has elected to report its interest rate swaps and currency swaps on a gross basis. No credit valuation adjustment was made in determining the fair value of interest rate and/or currency derivatives for the years ended December 31, 2014 and 2013.

Fair value under GAAP represents an exit price in the normal course of business, not a forced liquidation price. If the Company is forced to sell assets in a short period to meet liquidity needs, the prices it receives can be substantially less than their recorded fair values. Furthermore, the analysis of whether it is more likely than not that the Company will not be required to sell securities in an unrealized loss position before recovery of its amortized cost basis, the amount of such expected required sales, and the projected identification of which securities will be sold is also subject to significant judgment, particularly in times of market illiquidity.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

Any changes to the valuation methodology will be reviewed by the Company and its Manager to ensure the changes are appropriate. As markets and products develop and the pricing for certain products becomes more transparent, the Company will continue to refine its valuation methodologies. The Company utilizes and follows the pricing methodology and fair value hierarchy employed by its Manager, including its review and challenge process. The methods used by the Company may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while the Company anticipates that its valuation methods will be appropriate and consistent with other market participants, the use of different methodologies, or assumptions, to determine the fair value of certain financial instruments can result in a different estimate of fair value at the reporting date. The Company uses inputs that are current as of the measurement date, which may include periods of market dislocation, during which price transparency may be reduced.

All valuations received from independent pricing services are non-binding. The Company primarily utilizes an independent third party pricing service as the primary source for valuing the Company's assets.

The Company generally receives one independent pricing service price for each investment in the Company's portfolio. The Manager has established a process to review and validate the pricing received from the independent pricing service and has a process for challenging prices received from the independent pricing service when necessary. The Company utilizes our Manager's policies in this regard. The Company's and the Manager's review of the independent third party pricing data may consist of a review of the daily change in the prices provided by the independent pricing vendor which exceed established tolerances or comparisons to executed transaction prices. The Manager's pricing group, which functions independently from its portfolio management personnel, corroborates the price differences or changes in price by comparing the vendor price to alternate sources including other independent pricing services or broker quotations. If the price change or difference cannot be corroborated, the Manager's pricing group consults with the portfolio management team for market color in reviewing such pricing data as warranted. To the extent that the Manager has information, typically in the form of broker quotations that would indicate that a price received from the independent pricing service is outside of a tolerance range, our Manager generally challenges the independent pricing service price.

To ensure proper fair value hierarchy, The Company and the Manager review the methodology and data used by the third party pricing service to understand whether observable market data is being utilized in the vendor's pricing methodology. Generally, this review is conducted annually, however ad-hoc reviews of the pricing methodology and the data does occur. The review of the assumptive data received from the vendor includes comparing key inputs. In addition, as part of the Company's regular review of pricing, the Manager's pricing group may have informal discussions with the independent pricing vendor regarding their evaluation methodology or the market data utilized in their determination as well as performing back-testing with regard to the sale of securities. The conclusion that a price should be overridden in accordance with the Manager's pricing methodology may impact the fair value hierarchy of the security for which such price has been adjusted.

**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

***Interest income recognition and Impairment***

*Agency MBS, Non-Agency MBS and other securities, excluding Interest-Only Strips, rated AA and higher at the time of purchase*

Interest income on mortgage-backed and other securities is accrued based on the respective outstanding principal balances and corresponding contractual terms. Premiums and discounts associated with Agency MBS, Non-Agency MBS and other securities, excluding Interest-Only Strips, rated AA and higher at the time of purchase, are amortized into interest income over the estimated life of such securities using the effective yield method. Adjustments to premium and discount amortization are made for actual prepayment activity. The Company estimates prepayments at least quarterly for its securities and as a result, if prepayments increase (or are expected to increase), the Company will accelerate the rate of amortization on premiums or discounts and make a retrospective adjustment to historical amortization. Alternatively, if prepayments decrease (or are expected to decrease) the Company will reduce the rate of amortization on the premiums or discounts and make a retrospective adjustment to historical amortization.

The Company's conversion to a new accounting system in the calculation methodology used to determine the amortization of bond premium as of April 1, 2014, resulted in a change in estimate of approximately \$1.2 million. The impact of the change in estimate had no impact on Net income and was limited to an increase of approximately \$1.2 million to Interest Income and an equal offsetting reduction to Unrealized gain (loss) on Mortgage-backed securities, other securities and whole-loans, net on the Consolidated Statement of Operations. The Company does not believe the aforementioned change in estimate will have a material impact to subsequent periods.

The Company assesses its Agency MBS, Non-Agency MBS and other securities, excluding Interest-Only Strips, rated AA and higher at the time of purchase for other-than-temporary impairment on at least a quarterly basis. When the fair value of an investment is less than its amortized cost at the balance sheet date of the reporting period for which impairment is assessed, the impairment is designated as either "temporary" or "other-than-temporary." In deciding on whether or not a security is other-than-temporarily impaired, the Company considers several factors, including the nature of the investment, communications (if any) from the trustees of securitizations regarding the credit quality of the security, the severity and duration of the impairment, the cause of the impairment, and the Company's intent not to sell the security and whether it is more likely than not that Company will not be required to sell the security until recovery of its amortized cost basis. An other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the security is less than its carrying amount. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a "market participant" would use and are discounted at a rate equal to the current yield used to accrete interest income. These adjustments are reflected in the Company's Consolidated Statement of Operations as Other loss on Mortgage-backed securities and other securities.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

The determination as to whether an other-than-temporary impairment exists is subject to management estimates based on consideration of both factual information available at the time of assessment as well as the Company's estimates of the future performance and projected amount and timing of cash flows expected to be collected on the security. As a result, the timing and amount of an other-than-temporary impairment constitutes an accounting estimate that may change materially over time.

*Non-Agency MBS and other securities that are rated below AA at the time of purchase and Interest-Only Strips that are not classified as derivatives*

Interest income on Non-Agency MBS and other securities that are rated below AA at the time of purchase and Interest-Only Strips that are not classified as derivatives are recognized based on the effective yield method. The effective yield on these securities is based on the projected cash flows from each security, which is estimated based on the Company's observation of the then current information and events, where applicable, and will include assumptions related to interest rates, prepayment rates and the timing and amount of credit losses. On at least a quarterly basis, the Company reviews and, if appropriate, makes adjustments to its cash flow projections based on input and analysis received from external sources, internal models, and its judgment about interest rates, prepayment rates, the timing and amount of credit losses (if applicable), and other factors. Where appropriate, the Company may include in its cash flow projections the U.S Department of Justice's settlements with the major residential mortgage originators, regarding certain lending practices. Changes in cash flows from those originally projected, or from those estimated at the last evaluation, may result in a prospective change in the yield/interest income recognized on such securities. Actual maturities of the securities are affected by the contractual lives of the underlying collateral, periodic payments of scheduled principal, and prepayments of principal. Therefore, actual maturities of the securities will generally be shorter than stated contractual maturities.

Based on the projected cash flow of such securities purchased at a discount to par value, the Company may designate a portion of such purchase discount as credit protection against future credit losses and, therefore, not accrete such amount into interest income. The amount designated as credit discount may be adjusted over time, based on the actual performance of the security, its underlying collateral, actual and projected cash flow from such collateral, economic conditions and other factors. If the performance of a security with a credit discount is more favorable than forecasted, a portion of the amount designated as credit discount may be accreted into interest income prospectively.

In addition, an other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the security is less than its carrying amount. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a "market participant" would use and are discounted at a rate equal to the current yield used to accrete interest income. These adjustments are reflected in the Company's Consolidated Statements of Operations as Other loss on Mortgage-backed securities and other securities.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

Securities denominated in a foreign currency contain additional risk in that the amortized cost basis for those securities may not be recovered due to declines in currency exchange rates. The Company considers the length of time that the security's fair value has declined due to the decline in foreign exchange rates, when assessing other-than temporary impairment.

The determination as to whether an other-than-temporary impairment exists is subject to management estimates based on consideration of both factual information available at the time of assessment as well as the Company's estimates of the future performance and projected amount and timing of cash flows expected to be collected on the security. As a result, the timing and amount of an other-than-temporary impairment constitutes an accounting estimate that may change materially over time.

Finally, certain of the Company's MBS and other securities that are in an unrealized loss position at December 31, 2014 are also not considered other-than-temporarily impaired because the Company has no intent to sell these investments, it is more likely than not that the Company will not be required to sell the investment before recovery of its amortized cost basis and the Company is not required to sell the security for regulatory or other reasons.

*Residential whole-loans*

The Company records its purchases of residential whole-loans as the amount paid to the seller plus any fees paid or less any fees received. All other costs incurred in connection with acquiring purchased residential whole-loans or committing to purchased residential whole-loans are charged to expense as incurred. The Company amortizes or accretes any premium or discount over the life of the related loan utilizing the effective interest method, using contractual payments terms of the loans. On at least a quarterly basis, the Company evaluates the collectability of both interest and principal of each loan, if circumstances warrant, to determine whether they are impaired. A loan is impaired when, based on current information and events, it is probable that the Company will be unable to collect all amounts due according to the existing contractual terms. When a loan is impaired, the Company does not record a loss accrual as we have elected the fair value option. However, income recognition is suspended for loans at the earlier of the date at which payments become 90-days past due or when, in the opinion of management, a full recovery of income and principal becomes doubtful. When the ultimate collectability of the principal of an impaired loan is in doubt, all payments are applied to principal under the cost recovery method. When the ultimate collectability of the principal of an impaired loan is not in doubt, contractual interest is recorded as interest income when received, under the cash basis method until an accrual is resumed when the loan becomes contractually current and performance is demonstrated to be resumed. A loan is written off when it is no longer realizable and/or legally discharged.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

*Sales of securities*

Sales of securities are driven by the Company's portfolio management process. The Company seeks to mitigate risks including those associated with prepayments and will opportunistically rotate the portfolio into securities and/or other assets the Company's Manager believes have more favorable attributes. Strategies may also be employed to manage net capital gains, which need to be distributed for tax purposes. Realized gains or losses on sales of securities, including Agency Interest-Only Strips not characterized as derivatives, are included in the net Realized gain (loss) on sale of Mortgage-backed securities and other securities, net line item on the Consolidated Statements of Operations, and are recorded at the time of disposition. Realized gains or losses on sales of securities which are part of a linked transaction are included in Gain (loss) on linked transactions, net while realized gains losses on Interest-Only Strips which are characterized as derivatives are included in Gain (loss) on derivative instruments, net line item in the Consolidated Statements of Operations. The cost of positions sold is calculated using the specific identification method.

Securities in an unrealized loss position at the end of each reporting period are evaluated by the Company's Manager to determine whether the Company has the intent to sell such securities. To the extent the Company has no intent as of the end of such reporting period to sell such investments and it is more likely than not that the Company will not be required to sell the investment before recovery of its amortized cost basis, such unrealized loss is included in Unrealized gain (loss) on Mortgage-backed securities, other securities and whole-loans, net in the Consolidated Statements of Operations. Otherwise, when the Company has determined its intent to sell such securities, the unrealized loss is characterized as a realized loss and included in Other loss on Mortgage-backed securities and other securities on the Consolidated Statements of Operations. The Company has no intent to sell any of its investments in an unrealized loss position at December 31, 2014.

*Foreign currency transactions*

The Company has and expects to continue to enter into transactions denominated in foreign currency from time to time. At the date the transaction is recognized, the asset and/or liability will be measured and recorded using the exchange rate in effect at the date of the transaction. At each balance sheet date, such foreign currency assets and liabilities are re-measured using the exchange rate in effect at the date of the balance sheet, resulting in unrealized foreign currency gains or losses. Unrealized foreign currency gains or losses on MBS and other securities are recorded in Unrealized gain (loss) on Mortgage-backed securities, other securities and whole-loans, net on the Consolidated Statement of Operations. In addition, the Company evaluates whether an other-than-temporary impairment is deemed to have occurred on MBS and other securities denominated in a foreign currency. Cash flows from MBS and other securities denominated in foreign currencies are received in a foreign currency, and as a result, the Company may incur a loss due to changes in foreign exchange rates even when all contractual cash flows are received. These adjustments are reflected in our Consolidated Statements of Operations as Other loss on Mortgage-backed securities and other securities. Unrealized and realized foreign currency gains or losses on borrowings under repurchase agreements are recorded in Interest income on cash balances and other income (loss), net on the Consolidated Statement of Operations. Interest income from investments denominated in a foreign currency and interest expense on borrowings denominated in a foreign currency are recorded at the average rate of exchange during the period.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

*Variable Interest Entities ("VIEs")*

VIEs are defined as entities in which equity investors either do not have sufficient equity at risk for the entity to finance its activities without additional subordinated financial support, are unable to direct the entity's activities or are not exposed to the entity's losses or entitled to its residual returns. VIEs are required to be consolidated by their primary beneficiary. The primary beneficiary of a VIE is determined to be the party that has both the power to direct the activities of a VIE that most significantly impact the VIE's economic performance and the obligation to absorb losses of the VIE that could potentially be significant to the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE. This determination of the requirement to consolidate a VIE and the requirement to disclose information about the Company's involvement in a VIE can sometimes involve complex and subjective analyses. Ongoing assessments of whether an enterprise is the primary beneficiary of a VIE is required.

*Due from counterparties/Due to counterparties*

Due from counterparties represents cash posted by the Company with its counterparties as collateral for the Company's interest rate and/or currency derivative financial instruments, repurchase agreements, and TBAs. Due to counterparties represents cash posted with the Company by its counterparties as collateral under the Company's interest rate and/or currency derivative financial instruments, repurchase agreements, and TBAs. In addition, as provided below, Due to counterparties may include non-cash collateral in which the Company has the obligation to return the collateral upon the Company either selling or pledging the non-cash collateral. To the extent the Company receives collateral other than cash from its counterparties such assets are not included in the Company's Consolidated Balance Sheets. Notwithstanding the foregoing, if the Company either rehypothecates such assets or pledges the assets as collateral pursuant to a repurchase agreement, the cash received and the corresponding liability is reflected on the Consolidated Balance Sheets.

*Derivatives and hedging activities*

Subject to maintaining its qualification as a REIT for U.S. federal income tax purposes, the Company utilizes derivative financial instruments, including interest rate swaps, interest rate swaptions, mortgage put options, currency forwards, futures contracts, TBAs and Agency and Non-Agency Interest-Only Strips to hedge the interest rate and currency risk associated with its portfolio and related borrowings. Derivatives, subject to REIT requirements, are used for hedging purposes rather than speculation. The Company determines the fair value of its derivative positions and obtains quotations from third parties, including the Chicago Mercantile Exchange or CME, to facilitate the process of determining such fair values. If the Company's hedging activities do not achieve the desired results, reported earnings may be adversely affected.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

GAAP requires an entity to recognize all derivatives as either assets or liabilities and to measure those instruments at fair value. The accounting for changes in the fair value of derivatives depends on the intended use of the derivative, whether the Company has elected to designate a derivative in a hedging relationship and apply hedge accounting and whether the hedging relationship has satisfied the criteria necessary to apply hedge accounting. Derivatives are classified as either hedges of the fair value of a recognized asset or liability or of an unrecognized firm commitment (fair value hedge) or hedges of a forecasted transaction or the variability of cash flows to be received or paid related to a recognized asset or liability (cash flow hedge). Fair value adjustments are recorded in earnings immediately, if the Company does not elect hedge accounting for a derivative instrument.

The Company elected not to apply hedge accounting for its derivative instruments and records the change in fair value, net interest rate swap payments (including accrued amounts) and net currency payments (including accrued amounts) related to interest rate swaps and currency swaps, respectively in Gain (loss) on derivative instruments, net in its Consolidated Statements of Operations. In the Company's Consolidated Statements of Cash Flows, premiums received and paid on termination of its interest rate swaps, excluding interest rate swaps containing an other-than-insignificant financing element and the unamortized premium of MAC interest rate swaps, are included in cash flows from operating activities. On the other hand, proceeds and payments on settlement of swaptions, mortgage put options, futures contracts and TBAs are included in cash flows from investing activities. Proceeds and payments on settlement of forward contracts are reflected in cash flows from financing activities in the Company's Consolidated Statement of Cash Flows. While payments made at the time of entering MAC interest rate swaps are included in cash flows from investing activities, payments received by the Company upon entering MAC interest rate swaps are included in either cash flows from investing activities or cash flows from financing activities, depending on whether or not the derivative instrument includes an other-than-insignificant financing element. For MAC interest rate swaps containing an other-than-insignificant financing element, all cash flows over the life of the derivative are treated as cash flows from financing activities. Return and recovery of basis activity for MAC interest rate swaps is included in cash flows from investing activities for swaps not containing an other-than-insignificant financing element in the Company's Consolidated Statement of Cash Flows. For Agency and Non-Agency Interest-Only Strips accounted for as derivatives, the purchase, sale and recovery of basis activity is included with MBS and other securities under cash flows from investing activities in the Company's Consolidated Statement of Cash Flows.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

The Company also invests in Agency and Non-Agency Interest-Only Strips, interest rate swaptions, currency forwards, futures contracts and TBAs. The Company evaluates the terms and conditions of its holdings of Agency and Non-Agency Interest-Only Strips, interest rate swaptions, currency forwards, futures contracts and TBAs to determine if these instruments have the characteristics of an investment or should be considered a derivative under GAAP. In determining the classification of its holdings of Interest-Only Strips, the Company evaluates the securities to determine if the nature of the cash flows has been altered from that of the underlying mortgage collateral. Generally, Interest-Only Strips for which the security represents a strip off of a mortgage pass through security will be considered a hybrid instrument classified as a MBS investment on the Consolidated Balance Sheets utilizing the fair value option. Alternatively, those Interest-Only Strips, for which the underlying mortgage collateral has been included into a structured security that alters the cash flows from the underlying mortgage collateral, are accounted for as derivatives at fair value. Accordingly, Agency and Non-Agency Interest-Only Strips, interest rate swaptions, currency forwards, futures contracts and TBAs having the characteristics of derivatives are accounted for at fair value with such changes recognized in Gain (loss) on derivative instruments, net in its Consolidated Statements of Operations, along with any interest earned (including accrued amounts). The carrying value of the Agency and Non-Agency Interest-Only Strips, accounted for as derivatives, is included in Mortgage-backed securities on the Consolidated Balance Sheets. The carrying value of interest rate swaptions, currency forwards, futures contracts and TBAs is included in Derivative assets or Derivative liabilities on the Consolidated Balance Sheets.

The Company evaluates all of its financial instruments to determine if such instruments are derivatives or contain features that qualify as embedded derivatives. An embedded derivative is separated from the host contract and accounted for separately when all of the guidance criteria are met. Hybrid instruments that are remeasured at fair value through earnings, including the fair value option are not bifurcated. Derivative instruments, including derivative instruments accounted for as liabilities, are recorded at fair value and are re-valued at each reporting date, with changes in the fair value together with interest earned (including accrued amounts) reported in the Gain (loss) on derivatives, net in the Statements of Operations. While accounted for as derivative instruments, linked transactions, including changes in fair value and interest earned (including accrued amounts) are reported separately in our Consolidated Balance Sheets, Consolidated Statements of Operations and Consolidated Statements of Cash Flows. See "Warrants" below.

***Repurchase agreements***

Mortgage-backed securities and other securities sold under repurchase agreements are treated as collateralized financing transactions, unless they meet sales treatment. Securities financed through a repurchase agreement remain on the Company's Consolidated Balance Sheets as assets and cash received from the lender is recorded in the Company's Consolidated Balance Sheets as a liability, unless such transaction is accounted for as a linked transaction, described below. Interest payable in accordance with repurchase agreements is recorded as accrued interest payable on the Consolidated Balance Sheets. Interest paid in accordance with repurchase agreements is recorded as interest expense, unless the repurchase agreement is accounted for as a linked transaction, described below. The Company reflects all proceeds from repurchase agreement borrowings and repayment of repurchase agreement borrowings which are not linked transactions, including transactions pertaining to collateral received with respect to certain swap transactions, on a gross basis on the Consolidated Statements of Cash Flows.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

*Linked transactions*

In instances where the Company acquires a security through a repurchase agreement with the same counterparty from which the security was purchased, the Company evaluates such transaction in accordance with GAAP. This guidance requires that if the initial transfer of a financial asset and repurchase financing are entered into contemporaneously with, or in contemplation of, one another such transaction shall be considered linked unless all of the criteria found in the guidance are met at the inception of the transaction. If the transaction meets all of the conditions, the initial transfer shall be accounted for separately from the repurchase financing, and the Company will record the security and the related financing on a gross basis on its Consolidated Balance Sheets with the corresponding interest income and interest expense in the Consolidated Statements of Operations. If the transaction is determined to be linked, the Company will record the initial transfer and repurchase financing on a net basis and record a forward commitment to purchase the security as a derivative instrument with changes in market value being recorded on the Consolidated Statements of Operations. Such forward commitment is recorded at fair value with subsequent changes in fair value recognized in Gain (loss) on linked transactions, net on its Consolidated Statements of Operations. The Company refers to these transactions as Linked Transactions. When or if a transaction is no longer considered to be linked, the security and related repurchase financing will be reported on a gross basis. The unlinking of a transaction causes a realized event in which the fair value of the security as of the date of unlinking will become the cost basis of the real estate security. The difference between the fair value on the unlinking date and the existing cost basis of the security will be the realized gain or loss. Recognition of effective yield for such security will be calculated prospectively using the new cost basis. For linked transactions, the Company reflects purchases and sales of securities within the investing section of the Consolidated Statements of Cash Flows. Proceeds from repurchase agreements borrowings and repayments of repurchase agreement borrowings are reflected in the financing section of the Consolidated Statements of Cash Flows. Starting in 2015, GAAP will no longer require the segregation and treatment of linked transactions as derivatives. Accordingly, the Company will report such securities and the corresponding repurchase agreement on a gross basis on its Consolidated Balance Sheets and with the corresponding interest income and interest expense reported in its Consolidated Statements of Operations. See “Recent accounting pronouncements” for details.

*Share-based compensation*

The Company accounts for share-based compensation to its independent directors, to any employee, to its Manager and to employees of its Manager and its affiliates using the fair value based methodology prescribed by GAAP. Compensation cost related to restricted common stock issued to the Company’s independent directors including any such restricted stock which is subject to a deferred compensation program, and any employee of the Company is measured at its fair value at the grant date, and amortized into expense over the service period on a straight-line basis. Compensation cost related to restricted common stock issued to the Manager and to employees of the Manager, including officers of the Company who are employees of the Manager and its affiliates is initially measured at fair value at the grant date, and amortized into expense over the vesting period on a straight-line basis and re-measured on subsequent dates to the extent the awards are unvested.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

*Warrants*

For the Company’s warrants, the Company uses a variation of the adjusted Black-Scholes option valuation model to record the financial instruments at their relative fair values at issuance. The warrants issued with the Company’s common stock in the private placement to certain accredited institutional investors on May 15, 2012, were evaluated by the Company and were recorded at their relative fair value as a component of equity at the date of issuance. See “Derivatives and hedging activities” above.

*Income taxes*

The Company operates and has elected to be taxed as a REIT commencing with its taxable year ended December 31, 2012. Accordingly, the Company will generally not be subject to corporate U.S. federal or state income tax to the extent that the Company makes qualifying distributions to stockholders, and provided that the Company satisfies, on a continuing basis, through actual investment and operating results, the REIT requirements including certain asset, income, distribution and stock ownership tests. If the Company fails to qualify as a REIT, and does not qualify for certain statutory relief provisions, the Company will be subject to U.S. federal, state and local income taxes and may be precluded from qualifying as a REIT for the subsequent four taxable years following the year in which the Company lost its REIT qualification. Accordingly, the failure to qualify as a REIT could have a material adverse impact on the Company’s results of operations and amounts available for distribution to stockholders.

The dividends paid deduction for qualifying dividends paid to stockholders is computed using the Company’s taxable income as opposed to net income reported on the consolidated financial statements. Taxable income, generally, will differ from net income reported on the consolidated financial statements because the determination of taxable income is based on tax provisions and not GAAP.

The Company may create and elect to treat certain subsidiaries as Taxable REIT Subsidiaries (“TRS”). In general, a TRS may hold assets and engage in activities that the Company cannot hold or engage in directly and generally may engage in any real estate or non-real estate-related business. A TRS is subject to U.S. federal, state and local corporate income taxes, and its value may not exceed 25% of the value of the Company. While a TRS may generate net income, a TRS can declare dividends to the Company, which will be included in the Company’s taxable income and necessitate a distribution to its stockholders. Conversely, if the Company retains earnings at the TRS level, no distribution is required and it can increase book equity of the consolidated entity. As of December 31, 2014, the Company has a single wholly owned subsidiary which it has jointly elected to be treated as a TRS.

The Company evaluates uncertain tax positions, if any, and classifies interest and penalties, if any, related to unrecognized tax benefits, if any, as a component of the provision for income taxes.

*Offering costs*

Offering costs borne by the Company in connection with its IPO and concurrent private placement completed on May 15, 2012 as well as its follow-on public stock offering completed on October 3, 2012 and its follow-on public stock offering and concurrent private placement completed on April 9, 2014 (inclusive of the partial exercise of the greenshoe which was completed on May 7, 2014) are reflected as a reduction of additional paid-in-capital.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

*Earnings per share*

GAAP requires use of the two-class method of computing earnings per share for all periods presented for each class of common stock and participating securities as if all earnings for the period had been distributed. Under the two-class method, during periods of net income, the net income is first reduced for dividends declared on all classes of securities to arrive at undistributed earnings. During periods of net losses, the net loss is reduced for dividends declared on participating securities only if the security has the right to participate in the earnings of the entity and an objectively determinable contractual obligation to share in net losses of the entity. The Company's participating securities are not allocated a share of the net loss as the participating securities do not have a contractual obligation to share in the net losses of the Company.

The remaining earnings are allocated to common stockholders and participating securities, to the extent that each security shares in earnings, as if all of the earnings for the period had been distributed. Each total is then divided by the applicable number of shares to arrive at basic earnings per share. For the diluted earnings, the denominator includes all outstanding common shares and all potential common shares assumed issued if they are dilutive. The numerator is adjusted for any changes in income or loss that would result from the assumed conversion of these potential common shares.

*Comprehensive Income (Loss)*

The Company has none of the components of comprehensive income (loss) and therefore comprehensive income (loss) is not presented.

*Accounting standards applicable to emerging growth companies*

The JOBS Act contains provisions that relax certain requirements for "emerging growth companies", which includes the Company. For as long as the Company is an emerging growth company, which may be up to five full fiscal years, unlike other public companies, the Company will not be required to: (i) comply with any new or revised financial accounting standards applicable to public companies until such standards are also applicable to private companies under Section 102(b)(1) of the JOBS Act; (ii) provide an auditor's attestation report on management's assessment of the effectiveness of the Company's system of internal control over financial reporting pursuant to Section 404 of the Sarbanes-Oxley Act; (iii) comply with any new requirements adopted by the PCAOB requiring mandatory audit firm rotation or a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer; or (iv) comply with any new audit rules adopted by the PCAOB after April 5, 2012, unless the SEC determines otherwise. The Company currently take advantage of some of such exemptions. The Company's qualification for remaining an emerging growth company under the five full fiscal years expires on December 31, 2018. However, the Company may no longer qualify sooner if its gross revenues for any year equal \$1.0 billion or more, the Company issued more than \$1.0 billion in non-convertible debt during the three previous years, or on the date in which the Company is deemed to be a large accelerated filer.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 3—Summary of Significant Accounting Policies (Continued)**

As noted above, under the JOBS Act, emerging growth companies can delay adopting new or revised accounting standards that have different effective dates for public and private companies until such time as those standards apply to private companies. The Company intends to take advantage of such extended transition period. Since the Company will not be required to comply with new or revised accounting standards on the relevant dates on which adoption of such standards is required for other public companies, its financial statements may not be comparable to the financial statements of companies that comply with public company effective dates. If the Company were to elect to comply with these public company effective dates, such election would be irrevocable pursuant to Section 107 of the JOBS Act.

*Recent accounting pronouncements*

Accounting Standards to be Adopted in Future Periods

In April 2014, the Financial Accounting Standards Board issued updated guidance that changes the requirements for reporting discontinued operations. Under the new guidance, a discontinued operation is defined as a disposal of a component of an entity or group of components of an entity that is disposed of or is classified as held for sale and represents a strategic shift that has (or will have) a major effect on an entity's operations and financial results. The guidance is effective prospectively as of the first quarter of 2015, with early adoption permitted for new disposals or new classifications as held-for-sale. The guidance is effective for annual periods beginning on or after December 15, 2014 and interim periods within annual periods beginning on or after December 15, 2015. Early adoption is permitted but only for disposals (or classifications as held for sale) that have not been reported in financial statements previously issued or available for issue. The new guidance is not expected to have a material impact on the Company's consolidated financial statements.

In June 2014, the Financial Accounting Standards Board issued guidance that changes the accounting for repurchase-to-maturity transactions and repurchase financing arrangements. The new guidance aligns the accounting for repurchase-to-maturity transactions and repurchase agreements executed as a repurchase financing with the accounting for other typical repurchase agreements. These transactions would all be accounted for as secured borrowings. The guidance eliminates sale accounting for repurchase-to-maturity transactions and supersedes the guidance under which a transfer of a financial asset and a contemporaneous repurchase financing could be accounted for on a combined basis as a forward agreement, which has resulted in outcomes referred to as off-balance-sheet accounting. In addition, the guidance requires additional disclosures. The guidance is effective for the first interim or annual period beginning after December 15, 2014. Earlier application for a public company is prohibited. Certain disclosures under this guidance do not take effect until the first period beginning after March 15, 2015. The Company currently accounts for certain transfers as forward agreements under the existing guidance, which are currently classified as linked transactions. The new guidance will require the Company to record these transfers as secured borrowings. The implementation of the new guidance will result in a cumulative-effect adjustment to retained earnings as of the beginning of the period of adoption. The new guidance is not expected to have a material impact on the Company's consolidated financial statements.

**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 3—Summary of Significant Accounting Policies (Continued)**

In August 2014, the Financial Accounting Standards Board issued guidance that will require an entity's management to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and to provide related footnote disclosures. According to the new guidance, substantial doubt exists when conditions and events, considered in the aggregate, indicate that it is probable that the entity will be unable to meet its obligations as they become due within one year after the date the financial statements are issued. The term "probable" is used consistently with its current use in U.S. GAAP for loss contingencies. Disclosures will be required if conditions give rise to substantial doubt about the entity's ability to continue as a going concern, including whether management's plans that are intended to mitigate those conditions will alleviate the substantial doubt when implemented. The guidance is effective for annual periods ending after December 15, 2016. Early application is permitted. The Company's first assessment under the new guidance will be completed for the year ending December 31, 2016.

In January 2015, the FASB issued guidance to simplify income statement presentation by eliminating the concept of extraordinary items. U.S. GAAP currently requires that a company separately classify, disclose and present extraordinary events and transactions. The guidance eliminates the concept of extraordinary items from U.S. GAAP. Under the existing guidance, an entity is required to separately disclose extraordinary items, net of tax, in the income statement after income from continuing operations if an event or transaction is of an unusual nature and occurs infrequently. This separate, net-of-tax presentation (and corresponding earnings per share impact) will no longer be allowed. The existing requirement to separately present items that are of an unusual nature or occur infrequently on a pre-tax basis within income from continuing operations has been retained. The new guidance also requires similar separate presentation of items that are both unusual and infrequent. The standard is effective for periods beginning after December 15, 2015. Early adoption is permitted, but only as of the beginning of the fiscal year of adoption. Upon adoption, a reporting entity may elect prospective or retrospective application. If adopted prospectively, both the nature and amount of any subsequent adjustments to previously reported extraordinary items must be disclosed. The new guidance is not expected to have a material impact on the Company's consolidated financial statements.

In February 2015, the FASB issued guidance to simplify and reduce the number of consolidation models through the elimination of an indefinite deferral for certain entities and by placing more emphasis on risk of loss when determining a controlling financial interest. The guidance affects reporting entities that are required to evaluate whether they should consolidate certain legal entities. All legal entities are subject to reevaluation under the revised consolidation model. The standard is effective for fiscal years, and for interim periods within fiscal years beginning after December 15, 2015. Early adoption is permitted, including adoption in an interim period. If an entity early adopts the amendments in an interim period, any adjustments should be reflected as of the beginning of the fiscal year that includes that interim period. The Company is currently assessing the impact that this guidance will have on its consolidated financial statements when adopted.

**Note 4—Fair Value of Financial Instruments**

**Fair Value Accounting Elections**

The Company's MBS and other securities are designated as available-for-sale and the Company has elected the fair value option for all of its MBS and other securities. In addition, the Company has designated its residential whole-loans as held-for-investment and has elected the fair value option and as a result, all changes in the fair value of MBS, other securities and residential whole-loans are reflected in the results of operations.

**Financial Instruments carried at Fair Value**

The following tables present the Company's financial instruments carried at fair value as of December 31, 2014 and December 31, 2013, based upon the valuation hierarchy (dollars in thousands):

Transfers between hierarchy levels during operations for the years ended December 31, 2014 and December 31, 2013 were based on the availability of sufficient observable inputs to meet Level II versus Level III criteria. The valuation and leveling of these assets were based on information received from a third party pricing service which utilized significant unobservable inputs, along with the back-testing of historical sales transactions performed by the Manager.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 4—Fair Value of Financial Instruments (Continued)**

The Company primarily utilizes an independent third party pricing service as the main source for valuing the Company's assets. All valuations received from independent pricing services are non-binding. The Company generally receives one independent pricing service price for each investment in its portfolio. The Manager has established a process to review and validate the pricing received from the independent pricing service and has a process for challenging prices received from the independent pricing service when necessary. The Company utilizes its Manager's policies in this regard. The Company's and the Manager's review of the independent third party pricing data may consist of a review of the daily change in the prices provided by the independent pricing vendor which exceed established tolerances or comparisons to executed transaction prices. The Manager's pricing group, which functions independently from its portfolio management personnel, corroborates the price differences or changes in price by comparing the vendor price to alternate sources including other independent pricing services or broker quotations. If the price change or difference cannot be corroborated, the Manager's pricing group consults with the portfolio management team for market color in reviewing such pricing data as warranted. To the extent that the Manager has information, typically in the form of broker quotations that would indicate that a price received from the independent pricing service is outside of a tolerance range, the Manager generally challenges the independent pricing service price. To ensure proper fair value hierarchy, the Company and the Manager review the methodology used by the third party pricing service to understand whether observable market data is being utilized in the vendor's pricing methodology. Generally, this review is conducted annually, however ad-hoc reviews of the pricing methodology and the data does occur. In addition, as part of the Company's regular review of pricing, the Manager's pricing group may have informal discussions with the independent pricing vendor regarding their evaluation methodology or the market data utilized in their determination as well as performing back testing with regard to the sale of certain securities.

**Other Fair Value Disclosures**

Due from counterparties and Due to counterparties on the Company's Consolidated Balance Sheets are reflected at cost which approximates fair value.

The fair value of the repurchase agreements is based on an expected present value technique. This method discounts future estimated cash flows using rates the Company determined best estimate current market interest rates that would be offered for loans with similar characteristics and credit quality. The use of different market assumptions or estimation methodologies could have a material effect on the fair value amounts. At December 31, 2014, the Company's borrowings under repurchase agreements had a fair value of approximately \$3.9 billion and a carrying value of approximately \$3.9 billion. Inputs used to arrive at the fair value of the repurchase agreement borrowings are generally observable, and therefore, they would be considered a Level II fair value measurement.

Discount designated as Credit Reserve and OTTI . . . . .	(182,007)	(79,898)
Gross unrealized gains . . . . .	75,444	19,798
Gross unrealized losses . . . . .	(31,097)	(164,507)
<b>Fair value . . . . .</b>	<b><u>\$4,385,723</u></b>	<b><u>\$2,853,587</u></b>

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 5—Mortgage-Backed Securities and other securities (Continued)**

The following tables present the changes in the components of the Company's purchase discount and amortizable premium on its Non-Agency RMBS, Non-Agency CMBS and other securities for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (dollars in thousands):

	Year ended December 31, 2014		
	Discount Designated as Credit Reserve and OTTI	Accretable Discount(1)	Amortizable Premium(1)
Balance at beginning of period(2) . . . . .	\$ (79,898)	\$ (71,295)	\$ 20,625
Accretion of discount . . . . .	—	17,174	—
Amortization of premium . . . . .	—	—	(9,135)
Realized credit losses . . . . .	5,175	—	—
Purchases . . . . .	(163,082)	(117,396)	92,667
Sales . . . . .	46,848	73,345	(26,598)
Net impairment losses recognized in earnings . . . . .	(11,959)	—	—
Unlinking of Linked Transactions . . . . .	(13,889)	(297)	32,132
Transfers/release of credit reserve . . . . .	34,798	(7,335)	(27,463)
Balance at end of period(3) . . . . .	<u>\$ (182,007)</u>	<u>\$(105,804)</u>	<u>\$ 82,228</u>

- (1) Together with coupon interest, accretable purchase discount and amortizable premium is recognized as interest income over the life of the security.
- (2) The beginning of period balance for accretable discount does not agree to the end of period balance in the December 31, 2013 table since Non-Agency CMBS did not have a discount designated as credit reserve and OTTI for the year ended December 31, 2013; and therefore, the Non-Agency CMBS securities were not included in the table. Non-Agency CMBS is included in the table for December 31, 2014.
- (3) Subsequent reductions in the non-accretable discount results in a corresponding reduction in the amortizable premium.

**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 5—Mortgage-Backed Securities and other securities (Continued)**

At December 31, 2014, the Company did not intend to sell any of its MBS and other securities that were in an unrealized loss position, and it is “more likely than not” that the Company will not be required to sell these MBS and other securities before recovery of their amortized cost basis, which may be at their maturity.

The Company assesses its Agency MBS, Non-Agency MBS and other securities, excluding Interest-Only Strips, rated AA and higher at the time of purchase for other-than-temporary impairment on at least a quarterly basis. When the fair value of an investment is less than its amortized cost at the balance sheet date of the reporting period for which impairment is assessed, the impairment is designated as either “temporary” or “other-than-temporary.” In deciding on whether or not a security is other-than-temporarily impaired, the Company considers several factors, including the nature of the investment, communications (if any) from the trustees of securitizations regarding the credit quality of the security, the severity and duration of the impairment, the cause of the impairment, and the Company’s intent not to sell the security and that it is more likely than not that the Company will not be required to sell the security until recovery of its amortized cost. In addition, an other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the security is less than its carrying amount. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a “market participant” would use and are discounted at a rate equal to the current yield used to accrete interest income. These adjustments are reflected in the Company’s Consolidated Statement of Operations as Other loss on Mortgage-backed securities and other securities.

For Non-Agency MBS and other securities rated below AA at the time of purchase and Agency and Non-Agency Interest-Only Strips, excluding Interest-Only Strips classified as derivatives, an other-than-temporary impairment is deemed to have occurred when there is an adverse change in the expected cash flows (principal or interest) to be received and the fair value of the beneficial interest is less than its carrying amount. Other than for “plain-vanilla” variable rate Non-Agency MBS the Company does not bifurcate the loss between credit loss and loss attributed to change in interest rates, therefore, the entire loss is recorded as other-than-temporary. These adjustments are reflected in the Company’s Consolidated Statement of Operations as Other loss on Mortgage-backed securities and other securities. In determining whether an adverse change in cash flows occurred, the present value of the remaining cash flows, as estimated at the initial transaction date (or the last date previously revised), is compared to the present value of the expected cash flows at the current reporting date. The estimated cash flows reflect those a “market participant” would use and are discounted at a rate equal to the current yield used to accrete interest income. If an other-than-temporary impairment is recognized as a result of this analysis, the yield is maintained at the current accretion rate. The last revised estimated cash flows are then used for future impairment analysis purposes. The Company’s prepayment speed estimate is the primary assumption used to determine other-than temporary-impairments for Interest-Only Strips, excluding Agency and Non-Agency Interest-Only Strips accounted for as derivatives, for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012.

**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 5—Mortgage-Backed Securities and other securities (Continued)**

With respect to the Company’s portfolio, OTTI is generally recorded when the credit quality of the underlying collateral deteriorates and or the schedule payments are faster than previously projected. The credit deterioration could be as a result of, but not limited to increased projected realized losses, foreclosures, delinquencies and the likelihood of the borrower being able to make payments in the future. Generally, a prepayment occurs when a loan has a higher interest rate relative to current interest rates and lenders are willing to extend credit at the lower current interest rate. The Company recorded other-than-temporary impairments on its portfolio for the years ended December 31, 2014 and December 31, 2013 of approximately \$17.0 million and approximately \$11.8 million and approximately \$3.2 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively. The Company recorded other-than-temporary-impairments for the years ended December 31, 2014 and December 31, 2013 of approximately \$4.7 million and approximately \$11.3 million and approximately \$3.2 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively, for Agency IOs, Agency IIOs and 20-year Agency RMBS. The Company recorded approximately \$11.3 million and approximately \$550 thousand of other-than-temporary impairments for the years ended December 31, 2014 and December 31, 2013 and \$0 for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively for Non-Agency MBS. The Company recorded approximately \$228 thousand and approximately \$8 thousand of other-than-temporary-impairments for the years ended December 31, 2014 and December 31, 2013 and \$0 for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively for Non-Agency CMBS. In addition, the Company recorded approximately \$790 thousand and \$0 of other-than-temporary-impairments for the years ended December 31, 2014 and December 31, 2013, and \$0 for the period from May 15, 2012 (commencement of operations) through December 31, 2012, respectively for other securities. Other-than-temporary-impairments are reported as Other loss on Mortgage-backed securities and other securities in the Company’s Consolidated Statement of Operations.

The Company has made investment in certain Non-Agency RMBS inverse floaters. These securities’ coupon rates have an inverse relationship to a benchmark rate. When the benchmark interest rate increases the coupon payment rate will decrease because the benchmark interest rate is deducted from the coupon payment. The Company has generally purchased these securities at a premium. Accelerated prepayments on these bonds could result in an economic loss, as the Company would not recover the upfront premium. The premiums are amortized into income using the effective interest rate method. As of December 31, 2014 and December 31, 2013, the Company held \$93.9 million and \$22.7 million, respectively, in Non-Agency RMBS inverse floaters.

**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 6—Variable Interest Entities**

The Company consolidates a VIE when it is determined that the Company is the primary beneficiary of such VIE. The Company determined that it was the primary beneficiary of the trust because it was involved in certain aspects of the design of the trust, it has certain oversight rights on defaulted residential loans and has other significant decision making powers. In addition, the Company has the obligation to absorb losses and right to receive benefits from the trust that could potentially be significant to the trust. The Company assesses modifications to VIEs on an ongoing basis to determine if a significant reconsideration event has occurred that would change the Company's initial consolidation assessment. The consolidated trust includes 19 performing residential whole-loans which had no evidence of deteriorated credit quality upon consolidation. The following table presents a summary of the assets and liabilities of the residential whole-loan trust included in the Consolidated Balance Sheets as of December 31, 2014. Intercompany balances have been eliminated for purposes of this presentation.

	<u>December 31, 2014</u>
Residential whole-loans, at fair value . . . . .	\$7,220
Accrued interest receivable . . . . .	40
Total assets . . . . .	<u>\$7,260</u>
Accounts payable and accrued expenses . . . . .	<u>\$ 153</u>
Total liabilities . . . . .	<u>\$ 153</u>

The Company's risk with respect to each investment in trust is limited to its direct ownership in the trust. The residential loans held by the consolidated trust are held solely to satisfy the liabilities of the trust, and creditors of the trust have no recourse to the general credit of the Company for the trust certificates issued by the trust. The assets of a consolidated trust can only be used to satisfy the obligations of that trust. The Company is not contractually required and has not provided any additional financial support to the trust for the period ended December 31, 2014. The Company did not deconsolidate any trusts during the year ended December 31, 2014.

The following table presents in the components of the carrying value of residential whole-loans as of December 31, 2014 (in thousands):

	<u>December 31, 2014</u>
Principal balance . . . . .	\$7,034
Unamortized premium . . . . .	111
Unamortized discount . . . . .	(18)
Gross unrealized gains . . . . .	94
Gross unrealized losses . . . . .	<u>(1)</u>
Fair value . . . . .	<u>\$7,220</u>

**Note 7—Borrowings under Repurchase Agreements**

As of December 31, 2014, the Company had master repurchase agreements with 24 counterparties. As of December 31, 2014, the Company had borrowings under repurchase agreements with 21 counterparties, excluding borrowings for linked transactions. One of the Company's existing repurchase agreement counterparties and its affiliate has communicated their intention to exit the repurchase market in 2015. At December 31, 2014 the Company had \$52.3 million outstanding with these counterparties. The following tables summarize certain characteristics of the Company's repurchase agreements at December 31, 2014 and December 31, 2013 (dollars in thousands):

Securities Pledged	December 31, 2014		
	Repurchase Agreement Borrowings	Weighted Average Interest Rate on Borrowings Outstanding at end of period	Weighted Average Remaining Maturity (days)
Agency RMBS . . . . .	\$2,994,351	0.40%	32
Non-Agency RMBS . . . . .	473,942	1.54%	49
Agency and Non-Agency CMBS . .	325,864	1.55%	29
Other securities(1) . . . . .	81,564	1.55%	34
Total . . . . .	<u>\$3,875,721</u>	<u>0.66%</u>	<u>34</u>

(1) Other securities includes repurchase agreement borrowings of \$4.9 million on residential whole-loans owned through trust certificates. The trust certificates are eliminated upon consolidation.

Securities Pledged	December 31, 2013		
	Repurchase Agreement Borrowings	Weighted Average Interest Rate on Borrowings Outstanding at end of period	Weighted Average Remaining Maturity (days)
Agency RMBS . . . . .	\$2,331,276	0.43%	24
Non-Agency RMBS . . . . .	208,923	1.71%	14
Agency and Non-Agency CMBS . .	17,544	1.33%	58
Other securities . . . . .	21,324	1.68%	52
Total . . . . .	<u>\$2,579,067</u>	<u>0.55%</u>	<u>24</u>

For the years ended December 31, 2014 and December 31, 2013, the Company had average borrowings under its repurchase agreements of approximately \$3.7 billion and \$3.8 billion, respectively, had a maximum month-end balance during the period of approximately \$4.2 billion and \$4.8 billion, respectively. The Company had accrued interest payable at December 31, 2014 and December 31, 2013 of approximately \$3.4 million and \$1.7 million, respectively. In addition, at December 31, 2014, the Company had entered into repurchase agreement borrowings of approximately \$69.2 million, which settled between January 2, 2015 and January 5, 2015, with a weighted average interest rate of 1.35%, a weighted average contractual maturity of 67 days and secured by collateral of approximately \$104.0 million.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 7—Borrowings under Repurchase Agreements (Continued)**

The repurchase agreements bear interest at a contractually agreed-upon rate and typically have terms ranging from one month to three months. The Company's repurchase agreement borrowings are accounted for as secured borrowings when the Company maintains effective control of the financed assets. Under the repurchase agreements, the respective lender retains the right to determine the fair value of the underlying collateral. A reduction in the value of pledged assets requires the Company to post additional securities as collateral, pay down borrowings or establish cash margin accounts with the counterparties in order to re-establish the agreed-upon collateral requirements, and is referred to as a margin call. The inability of the Company to post adequate collateral for a margin call by the counterparty, in a timeframe as short as the close of the same business day, could result in a condition of default under the Company's repurchase agreements, thereby enabling the counterparty to liquidate the collateral pledged by the Company, which may have a material adverse effect on the Company's financial position, results of operations and cash flows. During 2013, the volatility in both the Agency and Non-Agency MBS markets necessitated the Company being required to post additional collateral with respect to its repurchase agreements. The Company was able to satisfy the requirement for incremental collateral by utilizing unpledged assets, cash on hand and reducing its overall leverage. In addition, during 2014 and 2013, the Company also rehypothecated pledged U.S. Treasury securities it received from its repurchase agreement and interest rate swap counterparties as incremental collateral in order to increase the Company's cash position. The maximum amount of repurchase borrowings for the rehypothecated securities was \$3.3 million and \$130.7 million during the years ended December 31, 2014 and December 31, 2013, respectively. At December 31, 2014 and December 31, 2013, the Company did not have any rehypothecated U.S. Treasury securities.

A return of such volatility in these markets may create additional stress on the overall liquidity of the Company due to the long-term nature of its assets and the short-term nature of its liabilities. In an instance of severe volatility, or where the additional stress on liquidity resulting from volatility is sustained over an extended period of time, the Company could be required to sell securities, possibly even at a loss, to generate sufficient liquidity to satisfy collateral and margin requirements which could have a material adverse effect on the Company's financial position, results of operations and cash flows. All of the Company's repurchase agreement counterparties are either U.S. financial institutions or the U.S. broker-dealer subsidiaries of foreign financial institutions.

Further, if the Company is unable to renew, replace or expand repurchase financing with other sources of financing on substantially similar terms it may have a material adverse effect on the Company's financial position, results of operations and cash flow, due to the long term nature of the Company's investments and relatively short-term maturities of the Company's repurchase agreements. Certain of the repurchase agreements provide the counterparty with the right to terminate the agreement if the Company does not maintain certain equity and leverage metrics, the most restrictive of which include a limit on leverage based on the composition of the Company's portfolio. The Company was in compliance with the terms of such financial tests as of December 31, 2014.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 7—Borrowings under Repurchase Agreements (Continued)**

At December 31, 2014 and December 31, 2013, repurchase agreements collateralized by MBS and other securities had the following remaining maturities:

(dollars in thousands)	December 31, 2014	December 31, 2013
Overnight . . . . .	\$ —	\$ 323,025
1 to 29 days . . . . .	2,034,282	1,393,356
30 to 59 days . . . . .	1,302,439	799,391
60 to 89 days . . . . .	484,109	63,295
90 to 119 days . . . . .	40,127	—
Greater than or equal to 120 days . . . . .	14,764	—
Total . . . . .	<u>\$3,875,721</u>	<u>\$2,579,067</u>

As discussed in Note 3, for any transactions determined to be linked, the initial transfer and repurchase financing will be recorded as a forward commitment to purchase assets. At December 31, 2014, the Company had repurchase agreements of approximately \$31.9 million that were accounted for as linked transactions. At December 31, 2013, the Company had repurchase agreements of approximately \$61.2 million that were accounted for as linked transactions. Linked repurchase agreements are not included in the tables above. See Note 9 for details.

At December 31, 2014, the following table reflects amounts of collateral at risk under its repurchase agreements greater than 10% of the Company's equity with any counterparty, including linked transactions.

Counterparty	December 31, 2014 (dollars in thousands)		
	Amount Collateral at Risk, at fair value	Weighted Average Remaining Maturity (days)	Percentage of Stockholders' Equity
Royal Bank of Canada . . . . .	\$100,906	55	16.2%
Credit Suisse Securities (USA) LLC . . . . .	86,009	25	13.8

Total . . . . .	<u>\$2,874,381</u>	<u>\$11,055</u>	<u>\$2,885,436</u>

- 1) Other securities include the fair value of residential whole-loans owned through trust certificates pledged of \$7.2 million.
- 2) Cash posted as collateral is included in Due from counterparties on the Company's Consolidated Balance Sheets.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 8—Collateral Positions (Continued)**

A reduction in the value of pledged assets typically results in the repurchase agreement counterparties, derivative counterparties and clearing margin counterparties initiating a daily margin call. At December 31, 2014 and December 31, 2013, MBS and other securities held by counterparties as security for repurchase agreements totaled approximately \$4.4 billion and approximately \$2.8 billion, respectively. Cash collateral held by counterparties at December 31, 2014 and December 31, 2013 was approximately \$184.8 million and \$55.4 million, respectively. Cash posted by counterparties at December 31, 2014 and December 31, 2013, was approximately \$12.2 million and \$65.9 million, respectively. In addition, at December 31, 2014 and December 31, 2013, the Company held securities of approximately \$530 thousand and \$0, respectively, received as collateral from its repurchase agreement counterparties to satisfy margin requirements. The Company has the ability to repledge collateral received from its repurchase counterparties.

**Note 9—Derivative Instruments**

The Company's derivatives currently include interest rate swaps ("interest rate swaps"), interest rate swaptions, TBAs, currency swaps and forwards, linked transactions, Agency and Non-Agency Interest-Only Strips that are classified as derivatives, and options.

**Interest rate swaps and interest rate swaptions**

The Company is exposed to certain risks arising from both its business operations and economic conditions. Specifically, the Company's primary source of debt funding is repurchase agreements and the Company enters into derivative financial instruments to manage exposure to variable cash flows on portions of its borrowings under those repurchase agreements. Since the interest rates on repurchase agreements typically change with market interest rates such as LIBOR, the Company is exposed to constantly changing interest rates, which accordingly affects cash flows associated with these rates on its borrowings. To mitigate the effect of changes in these interest rates, the Company enters into interest rate swap agreements which help to mitigate the volatility in the interest rate exposures and their related cash flows. Interest rate swaps generally involve the receipt of variable-rate amounts from a counterparty in exchange for the Company making fixed-rate payments over the life of the interest rate swap without exchange of the underlying notional amount. Notwithstanding the foregoing, in order to manage its hedge position with regard to its liabilities, the Company on occasion will enter into interest rate swaps which involve the receipt of fixed-rate amounts from a counterparty in exchange for the Company making variable-rate payments over the life of the interest rate swap without exchange of the underlying notional amount. The Company also enters into forward starting swaps and interest rate swaptions to help mitigate the effects of increases in interest rates on a portion of its borrowings under repurchase agreements. Interest rate swaptions provide the Company the option to enter into an interest rate swap agreement for a predetermined notional amount, stated term and pay and receive interest rates in the future. On occasion the Company may enter into a MAC interest rate swap in which it may receive or make a payment at the time of entering such interest rate swap to compensate for the out of the market nature of such interest rate swap. Similar to all other interest rate swaps, these interest rate swaps are also subject to margin requirements previously described.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

While the Company has not elected to account for its interest rate swap derivative instruments as "hedges" under GAAP, it does not use interest rate swaps and swaptions for speculative purposes, but rather uses such instruments to manage interest rate risk and views them as economic hedges. Changes in the fair value of derivatives not designated in hedging relationships are recorded directly in earnings together with periodic net interest settlement amounts.

The Company's interest rate swaps, interest rate swaptions, currency swaps and forwards, futures contracts, TBA derivative instruments, options and linked transactions consisted of the following at December 31, 2014 and December 31, 2013 (dollars in thousands):

Derivative Instrument	Designation	Consolidated Balance Sheets Location	December 31, 2014		
			Notional Amount	Fair Value, excluding accrued interest	Accrued Interest Payable (receivable)

Total . . . . .	\$2,163,600	\$47,275	0.2%	8.8	5.1%

Remaining Interest Rate swap Term	December 31, 2013				
	Notional Amount	Fair Value—Asset (Liability), net	Average Variable Pay Rate	Average Maturity (Years)	Forward Starting
Greater than 3 years and less than 5 years . . . . .	\$ 81,000	\$ (475)	0.2%	4.8	—%
Greater than 5 years . . . . .	46,000	(1,243)	0.2	24.1	—
Total . . . . .	\$127,000	\$(1,718)	0.2%	11.8	—%

The Company's agreements with certain of its bilateral interest rate swap counterparties may be terminated at the option of the counterparty, settled at fair value, if the Company does not maintain certain equity and leverage metrics, the most restrictive of which contain provisions which become more restrictive based upon portfolio composition. Through December 31, 2014, the Company was in compliance with the terms of such financial tests.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

The Company has minimum collateral posting thresholds with certain of its derivative counterparties, including with its clearing broker for cleared swaps, for which it typically pledges cash. Due to volatility in the fixed income markets during 2014 primarily resulting from the rally in U.S Treasuries and the corresponding reduction in long-term interest rates, the Company was required to post incremental cash collateral with derivative counterparties. The Company used cash on hand and cash received with respect to repurchase agreements to satisfy these requirements. As of December 31, 2014 and December 31, 2013, the Company had cash pledged as collateral for derivatives of approximately \$159.0 million and \$22.8 million, respectively, which is reported on the Consolidated Balance Sheets as Due from counterparties. The Company received cash of approximately \$10.1 million and \$62.7 million as collateral against derivatives at December 31, 2014 and December 31, 2013, respectively, which is reported on the Consolidated Balance Sheets as Due to counterparties. As of December 31, 2014, the Company has swaps with two counterparties that are based in England and Switzerland, with fair values in a liability position of approximately \$86 thousand and fair values in an asset position of \$645 thousand and notional balances of \$49.3 million and \$163.9 million, respectively. At December 31, 2013, the Company had swaps with fair values in an asset position of \$19.4 million and \$34.2 million and notional balances of \$321.8 million and \$825.1 million with these two counterparties. Included in the \$159.0 million and \$22.8 million pledged by the Company is cash pledged to the counterparty based in Switzerland of \$500 thousand and \$0 at December 31, 2014 and December 31, 2013, respectively. Included in the \$10.1 million and \$62.7 million received by the Company is cash posted as collateral by the counterparty based in England of approximately \$3.4 million at December 31, 2014 and \$42.7 million posted by the two counterparties at December 31, 2013, respectively.

**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

*Currency Swaps and Forwards*

The Company has invested in and, in the future, may invest in additional securities which are denominated in a currency or currencies other than U.S. dollars. Similarly, it has and may in the future, finance such assets in a currency or currencies other than U.S. dollars. In order to mitigate the impact to the Company, the Company may enter into derivative financial instruments, including foreign currency swaps and foreign currency forwards, to manage of fluctuations in the valuation between U.S. dollars and such foreign currencies. Foreign currency swaps involve the payment of a foreign currency at fixed interest rate on a fixed notional amount and the receipt of U.S. dollars at a fixed interest rate on a fixed notional amount. Foreign currency forwards provide for the payment of a fixed amount of a foreign currency in exchange for a fixed amount of U.S. dollars at a date certain in the future. The carrying value of foreign currency swaps and forwards is included in Derivative assets (liabilities), at fair value on the Consolidated Balance Sheets with changes in valuation included in Gain (loss) on derivative instruments, net on the Consolidated Statement of Operations. The following is a summary of the Company's foreign currency forwards at December 31, 2014 (dollars and euros in thousands):

Derivative Type	Notional Amount	Notional (USD Equivalent)	Maturity	Fair Value
Buy USD/Sell EUR Currency forward . . . . .	€ 3,331	\$ 4,143	January 2015	\$ 112
Buy USD/Sell EUR Currency forward . . . . .	7,766	9,417	January 2015	21
Buy USD/Sell EUR Currency forward . . . . .	3,471	4,211	February 2015	9
Buy EUR/Sell USD Currency forward . . . . .	5,000	6,051	January 2015	1
Currency forwards, assets . . . . .	€19,568	\$23,822	n/a	\$ 143
Buy USD/Sell EUR Currency forward . . . . .	€ 5,043	\$ 6,104	February 2015	\$ (1)
Buy EUR/Sell USD Currency forward . . . . .	11,156	13,542	April 2015	(30)
Buy EUR/Sell USD Currency forward . . . . .	11,156	13,914	January 2015	(415)
Currency forwards, liabilities . . . . .	€27,355	\$33,560	n/a	\$(446)
Total currency forwards . . . . .	€46,923	\$57,382	n/a	\$(303)

The following is a summary of the Company's foreign currency swaps with a fair value of \$3.9 million at December 31, 2014 (dollars and euros in thousands):

Date entered	Maturity	Fixed Rate	Denomination	Notional Amount
June 2014 . . . . .	July 2024	7.25%	EUR	18,500
June 2014 . . . . .	July 2024	9.005%	USD	25,160

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

*Interest-Only Strips*

The Company also invests in Interest-Only Strips. In determining the classification of its holdings of Interest-Only Strips, the Company evaluates the securities to determine if the nature of the cash flows has been altered from that of the underlying mortgage collateral. Generally, Interest-Only Strips for which the security represents a strip off of a mortgage pass through security will be considered a hybrid instrument classified as a MBS investment on the Consolidated Balance Sheets utilizing the fair value option. Alternatively, those Interest-Only Strips, for which the underlying mortgage collateral has been included into a structured security that alters the cash flows from the underlying mortgage collateral, are accounted for as derivatives at fair value with changes recognized in Gain (loss) on derivative instruments, net in the Consolidated Statements of Operations, along with any interest received. The carrying value of these Interest-Only Strips is included in Mortgage-backed securities on the Consolidated Balance Sheets.

*To-be-announced securities*

The Company has also purchased or sold TBAs. As of December 31, 2014 and December 31, 2013, the Company had contracts to purchase ("long position") and sell ("short position") TBAs on a forward basis. Following is a summary of the Company's long and short TBA positions reported in Derivative assets, at fair value on the Consolidated Balance Sheets as of December 31, 2014 and December 31, 2013 (dollars in thousands):

	December 31, 2014		December 31, 2013	
	Notional Amount	Fair Value	Notional Amount	Fair Value
Purchase contracts, asset . . . . .	\$ 2,915,000	\$ 17,457	\$ 13,600	\$ 35
TBA securities, asset . . . . .	2,915,000	17,457	13,600	35
Purchase contracts, liability . . . . .	—	—	176,400	(1,207)
Sale contracts, liability . . . . .	(2,590,000)	(12,355)	—	—
TBA securities, liability . . . . .	(2,590,000)	(12,355)	176,400	(1,207)
TBA securities, net . . . . .	\$ 325,000	\$ 5,102	\$190,000	\$(1,172)

The following table presents additional information about the Company's contracts to purchase and sell TBAs for the year ended December 31, 2014 (dollars in thousands):

	Notional Amount as of December 31, 2013	Additions	Settlement, Termination, Expiration or Exercise	Notional Amount as of December 31, 2014
	Purchase of TBAs . . . . .	\$190,000	\$25,353,196	\$(22,628,196)
Sale of TBAs . . . . .	\$ —	\$25,218,196	\$(22,628,196)	\$2,590,000

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

**Futures Contracts**

The Company also entered into Eurodollar futures during the year ended December 31, 2014. As of December 31, 2014, the Company had purchase contracts (“long position”), representing a notional amount of \$592.0 million with a fair value of \$451 thousand and an expiration date of June 2016. In addition, as of December 31, 2014, the Company had contracts to sell (“short position”), representing a notional amount of \$592.0 million with a fair value in a liability position of \$1.2 million and an expiration date of June 2018.

**Gain (loss) on derivative instruments**

The below tables summarize the effect of interest rate swaps, interest rate swaptions, foreign currency swaps, foreign currency forwards, options, futures contracts, Agency and Non-Agency Interest-Only Strips as derivatives and TBAs reported in Gain (loss) on derivative instruments, net on our Consolidated Statements of Operations for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (dollars in thousands):

Description	Year ended December 31, 2014				
	Realized Gain (Loss), net	Contractual interest income (expense), net(1)	Return (Recovery) of Basis	Mark-to-market adjustments	Total
Interest rate swaps . . . . .	\$ 5,440	\$(31,764)	\$ 1,818	\$(183,379)	\$(207,885)

(1) Contractual interest income (expense), net on derivative instruments includes interest settlement paid or received.

**Linked Transactions**

As discussed in Note 3, when the initial transfer of a financial asset and repurchase financing are entered into contemporaneously with, or in contemplation of, one another, the transaction will be considered linked unless all of the criteria found in the applicable accounting guidance are met at the inception of the transaction. If the transaction is determined to be linked, the Company records the initial transfer and repurchase financing on a net basis and records a forward commitment to purchase assets as a derivative instrument with changes in market value being recorded in the Gain (loss) on linked transactions, net on the Consolidated Statements of Operations. While linked transactions are treated as derivatives for GAAP, the fair value of linked transactions reflects the value of the underlying security’s fair market value netted with the respective linked repurchase agreement borrowings.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

The following tables present certain information related to the securities and repurchase agreements accounted for as part of linked transaction which is reported in Linked transactions, net, at fair value on the Consolidated Balance Sheets at December 31, 2014 and December 31, 2013 and Gain (loss) on linked transactions, net on the Statements of Operations for the years ended December 31, 2014 and December 31, 2013 (dollars in thousands):

Instrument	For the year ended December 31, 2014						Weighted Average Life (years)/ Weighted Average days to Maturity(2)
	Fair Value(2)	Net Interest Income(1) (Expense)	Mark-to-market adjustments on linked transactions	Net Realized Gain (loss)	Gain (loss) on linked transactions, net	Weighted Average Coupon / Cost of Funds(2)

Other securities Repurchase Agreement . . . . .	(2,840)	(33)	—	—	(33)	1.93%	37 days
Linked transactions, net, at fair value . . . . .	<u>\$ 20,627</u>	<u>\$2,333</u>	<u>\$(1,860)</u>	<u>\$1,397</u>	<u>\$ 1,870</u>	<u>n/a</u>	<u>n/a</u>

- (1) Net interest income includes amortization of premium of approximately \$3.3 million for Non-Agency RMBS and \$0 for Non-Agency CMBS and accretion of \$221 thousand for other securities.  
(2) Includes information only for linked transactions at December 31, 2014.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 9—Derivative Instruments (Continued)**

Instrument	For the Year Ended December 31, 2013						Weighted Average Life (years)/ Weighted Average days to Maturity(2)
	Fair Value(2)	Net Interest Income(1) (Expense)	Mark-to-market adjustments on linked transactions	Net Realized Gain (loss)	Gain (loss) on linked transactions, net	Weighted Average Coupon / Cost of Funds(2)	
Agency RMBS . . . . .	\$ —	\$ 44	\$ —	\$ (254)	\$ (210)	n/a	n/a
Non-Agency RMBS . . . . .	79,746	1,371	(56)	3,303	4,618	27.06%	9.6 years
Agency Repurchase Agreement . . . . .	—	(6)	—	—	(6)	n/a	n/a
Non-Agency Repurchase Agreement . . . . .	(61,187)	(265)	—	—	(265)	1.70%	63 days
Linked transactions, net, at fair value . . . . .	<u>\$ 18,559</u>	<u>\$1,144</u>	<u>\$(56)</u>	<u>\$3,049</u>	<u>\$4,137</u>	<u>n/a</u>	<u>n/a</u>

- (1) Net interest income includes amortization of premium of \$9 thousand for Agency RMBS and accretion of discount of \$555 thousand for Non-Agency RMBS.  
(2) Includes information only for linked transactions at December 31, 2013.

At December 31, 2014, the Company pledged MBS and other securities accounted for as linked transactions with a fair value of approximately \$52.5 million as collateral for the related linked repurchase agreements. The Company reduces credit risk on the majority of its derivative instruments by entering into agreements that permit the closeout and netting of transactions with the same counterparty upon occurrence of certain events. Starting in 2015, GAAP will no longer require the segregation and treatment of linked transactions as derivatives. Accordingly, the Company will report such securities and the corresponding repurchase agreement on a gross basis on its Consolidated Balance Sheets and with the corresponding interest income and interest expense reported in its Consolidated Statements of Operations. See “Recent accounting pronouncements” for details.

- (2) Cash collateral pledged against the Company's Swaps was approximately \$22.8 million as of December 31, 2013.
- (3) The fair value of securities pledged against the Company's repurchase agreements was approximately \$2.8 billion as of December 31, 2013.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 10—Offsetting Assets and Liabilities (Continued)**

Certain of the Company's repurchase agreement and derivative transactions are governed by underlying agreements that generally provide for a right of setoff in the event of default or in the event of a bankruptcy of either party to the transaction.

**Note 11—Related Party Transactions**

***Management Agreement***

In connection with the Company's IPO in May 2012, the Company entered into a management agreement (the "Management Agreement") with the Manager, which describes the services to be provided by the Manager and compensation for such services. The Manager is responsible for managing the Company's operations, including: (i) performing all of its day-to-day functions; (ii) determining investment criteria in conjunction with the Board of Directors; (iii) sourcing, analyzing and executing investments, asset sales and financings; (iv) performing asset management duties; and (v) performing financial and accounting management, subject to the direction and oversight of the Company's Board of Directors. Pursuant to the terms of the Management Agreement, the Manager is paid a management fee equal to 1.50% per annum of the Company's stockholders' equity (as defined in the Management Agreement), calculated and payable (in cash) quarterly in arrears. For purposes of calculating the management fee, "stockholders' equity" means the sum of the net proceeds from any issuances of the Company's equity securities since inception (allocated on a pro rata daily basis for such issuances during the fiscal quarter of any such issuance), plus retained earnings, calculated in accordance with GAAP, at the end of the most recently completed fiscal quarter (without taking into account any non-cash equity compensation expense incurred in current or prior periods), less any amount paid for repurchases of the Company's shares of common stock, excluding any unrealized gains, losses or other non-cash items, including OTTI charges included in other loss on MBS and other securities, unrealized gain (loss) on MBS and other securities and non-cash portion of gain (loss) on derivative instruments, that have impacted stockholder's equity as reported in the Company's consolidated financial statements prepared in accordance with GAAP, regardless of whether such items are included in other comprehensive income or loss, or in net income, and excluding one-time events pursuant to changes in GAAP and certain other non-cash charges after discussions between the Manager and the Company's independent directors and after approval by a majority of the Company's independent directors. However, if the Company's stockholders' equity for any given quarter is negative based on the calculation described above, the Manager will not be entitled to receive any management fee for that quarter.

In addition, the Company may be required to reimburse the Manager for certain expenses as described below, and shall reimburse the Manager for the compensation paid to the Company's CFO and controller. Expense reimbursements to the Manager are made in cash on a regular basis. The Company's reimbursement obligation is not subject to any dollar limitation. Because the Manager's personnel perform certain legal, accounting, due diligence tasks and other services that outside professionals or outside consultants otherwise would perform, the Manager may be paid or reimbursed for the documented cost of performing such tasks, provided that such costs and reimbursements are in amounts which are no greater than those which would be payable to outside professionals or consultants engaged to perform such services pursuant to agreements negotiated on an arm's-length basis.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 11—Related Party Transactions (Continued)**

The Management Agreement may be amended, supplemented or modified by agreement between the Company and the Manager. The initial term of the Management Agreement expires on May 15, 2015 and it is automatically renewed for one-year terms on each anniversary thereafter unless previously terminated as described below. The Company's independent directors will review the Manager's performance and any fees payable to the Manager annually and, following the initial term, the Management Agreement may be terminated annually upon the affirmative vote of at least two thirds ( $\frac{2}{3}$ ) of the Company's independent directors, based upon: (i) the Manager's unsatisfactory performance that is materially detrimental to the Company; or (ii) the Company's determination that any fees payable to the Manager are not fair, subject to the Manager's right to prevent such termination due to unfair fees by accepting a reduction of management fees agreed to by at least two thirds ( $\frac{2}{3}$ ) of the Company's independent directors. The Company will provide the Manager 180 days prior notice of any such termination. Unless terminated for cause, the Company will pay the Manager a termination fee equal to three times the average annual management fee earned by the Manager during the prior 24-month period immediately preceding the date of termination, calculated as of the end of the most recently completed fiscal quarter prior to the date of termination. Pursuant to the terms of the Management Agreement it has been extended for one year to May 15, 2016.

The Company may also terminate the Management Agreement at any time, including during the initial term, without the payment of any termination fee, with 30 days prior written notice from the Company's Board of Directors for cause, which will be determined by at least two thirds ( $\frac{2}{3}$ ) of the Company's independent directors, which is defined as: (i) the Manager's continued material breach of any provision of the Management Agreement (including the Manager's failure to comply with the Company's investment guidelines); (ii) the Manager's fraud, misappropriation of funds, or embezzlement against the Company; (iii) the Manager's gross negligence in the performance of its duties under the Management Agreement; (iv) the occurrence of certain events with respect to the bankruptcy or insolvency of the Manager, including an order for relief in an involuntary bankruptcy case or the Manager authorizing or filing a voluntary bankruptcy petition; (v) the Manager is convicted (including a plea of nolo contendere) of a felony; or (vi) the dissolution of the Manager.

For the years ended December 31, 2014 and December 31, 2013, the Company incurred approximately \$9.6 million and approximately \$7.8 million in management fees, respectively, and approximately \$3.1 million for the period from May 15, 2012 (commencement of operations) through December 31, 2012. The increase in management fee for the year ended December 31, 2014 versus December 31, 2013 is attributable to the public offering in April 2014.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 11—Related Party Transactions (Continued)**

In addition to the management fee, the Company is also responsible for reimbursing the Manager for certain expenses paid by the Manager on behalf of the Company, including travel expenses incurred by officers of the Company, and for certain services provided by the Manager to the Company. For the year ended December 31, 2014, the Company recorded expenses included in general and administrative expense totaling approximately \$624 thousand related to employee costs and benefits associated with the Company's CFO and controller paid by the Manager on behalf of the Company. For the year ended December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012, the Company recorded expenses included in general and administrative expense totaling approximately \$76 thousand and approximately \$23 thousand, respectively related to employee benefits associated with the Company's sole employee paid by the Manager on behalf of the Company. As of January 1, 2014, the aforementioned employee became an employee of the Manager. Accordingly, as of January 1, 2014 the Company has and will reimburse the Manager for such employee's compensation including employee benefits as well as the compensation and employee benefits of the Company's controller. Any such expenses incurred by the Manager and reimbursed by the Company, including the employee compensation expense discussed above, are typically included in the Company's general and administrative expense on its Consolidated Statements of Operations, or may be reflected on the Consolidated Balance Sheets and associated consolidated statement of changes in stockholders' equity, based on the nature of the item. At December 31, 2014 and December 31, 2013, approximately \$2.5 million and approximately \$1.8 million, respectively for management fees incurred but not yet paid was included in payable to related party on the Consolidated Balance Sheets. In addition, at December 31, 2014 and December 31, 2013, approximately \$199 thousand and \$0, respectively of costs incurred but not yet paid was included in Payable to related party on the Consolidated Balance Sheets.

**Note 12—Share-Based Payments**

In conjunction with the Company's IPO and concurrent private placement, the Company's Board of Directors approved the Western Asset Mortgage Capital Corporation Equity Plan (the "Equity Plan") and the Western Asset Manager Equity Plan (the "Manager Equity Plan" and collectively the "Equity Incentive Plans").

On May 15, 2012, the Company granted 51,159 shares of restricted common stock to the Manager under the Manager Equity Plan that is equal to 0.5% of the aggregate number of shares of common stock sold in the IPO and units sold in the concurrent private placement to certain institutional accredited investors. One-third of these restricted shares vested on May 15, 2013, the first anniversary of the grant date, one-third vested on May 15, 2014, the second anniversary of the grant date, and the remaining one-third will vest on May 15, 2015 the third anniversary of the grant date.

On May 15, 2012, the Company granted a total of 4,500 shares (1,500 each) of restricted common stock under the Equity Plan to the Company's three independent directors. These restricted shares vested in full on May 15, 2013, the first anniversary of the grant date.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
**(in thousands—except share and per share data)**

**Note 12—Share-Based Payments (Continued)**

On June 25, 2012, the Company granted 10,455 shares of restricted common stock to its chief financial officer under the Equity Plan. One-third of these restricted shares vested on January 1, 2013, one-third vested on January 1, 2014 and the remaining one-third vested on January 1, 2015. As of January 1, 2014, the Company's chief financial officer became an employee of the Manager. As such, the method for recognizing stock based compensation expense for his unvested shares as of such date changed to be accounted for as a non-employee grant subject to subsequent fair value re-measurement.

On March 1, 2013, the Company granted a total of 150,000 shares of restricted common stock to the Manager under the Manager Equity Plan. One-third of these shares vested on March 1, 2014, one-third of these shares vested on March 1, 2015 and the remaining one-third will vest on March 1, 2016.

On March 1, 2013, the Company granted 10,559 shares of restricted common stock to its chief financial officer under the Equity Plan. One-third of these restricted shares vested on January 1, 2014, one-third vested on January 1, 2015 and the remaining one-third will vest on January 1, 2016. As of January 1, 2014, the Company's chief financial officer became an employee of the Manager. As such, the method for recognizing stock based compensation expense for the remaining unvested shares as of such date changed to be accounted for as a non-employee grant subject to subsequent fair value re-measurement.

On June 10, 2013, the Company granted a total of 4,887 (1,629 each) of restricted common stock under the Equity Plan to the Company's three independent directors. These restricted shares vested in full on June 10, 2014, the first anniversary of the grant date. Each of the independent directors has elected to defer the shares granted to him under the Company's Director Deferred Fee Plan (the "Director Deferred Fee Plan"). The Director Deferred Fee Plan permits eligible members of the Company's Board of Directors to defer certain stock awards made under its director compensation programs. The Director Deferred Fee Plan allows directors to defer issuance of their stock awards and therefore defer payment of any tax liability until the deferral is terminated, pursuant to the election form executed each year by each eligible director.

On March 12, 2014, the Company granted 200,000 shares of restricted common stock to the Manager under the Manager Equity Plan. One-third of these shares vested on March 1, 2015, one-third will vest on March 1, 2016 and the remaining one-third will vest on March 1, 2017.

On March 12, 2014, the Company granted 15,180 shares of restricted common stock to its chief financial officer under the Equity Plan. One-third of these shares vested on January 1, 2015, one-third will vest on January 1, 2016 and the remaining one-third will vest on January 1, 2017. As of January 1, 2014, the Company's chief financial officer became an employee of the Manager. As such, the stock based compensation expense for the unvested shares as of such date is accounted for as a non-employee grant subject to subsequent fair value re-measurement.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 12—Share-Based Payments (Continued)**

On June 11, 2014, the Company granted a total of 6,264 (2,088 each) of restricted common stock under the Equity Plan to the Company's three independent directors. These restricted shares will vest in full on June 11, 2015, the first anniversary of the grant date. Each of the independent directors has elected to defer the shares granted to him under the Company's Director Deferred Fee Plan (the "Director Deferred Fee Plan"). The Director Deferred Fee Plan permits eligible members of the Company's Board of Directors to defer certain stock awards made under its director compensation programs. The Director Deferred Fee Plan allows directors to defer issuance of their stock awards and therefore defer payment of any tax liability until the deferral is terminated, pursuant to the election form executed each year by each eligible director.

On November 10, 2014, the Company granted 1,334 shares of restricted common stock under the Equity Plan to the Company's new independent director. These restricted shares will vest in full on November 10, 2015, the first anniversary of the grant date.

The Equity Incentive Plans include provisions for grants of restricted common stock and other equity-based awards to the Manager, its employees and employees of its affiliates and to the Company's directors, officers and employees. The Company can issue up to 3.0% of the total number of issued and outstanding shares of its common stock (on a fully diluted basis) at the time of each award (other than any shares previously issued or subject to awards made pursuant to one of the Company's Equity Incentive Plans) under these Equity Incentive Plans. At May 15, 2012, there were 308,335 shares of common stock initially reserved for issuance under the Equity Incentive Plans. Upon the completion of the October 3, 2012 follow-on common stock offering and the stock portion of the Company's dividend declared December 19, 2013, and the April 9, 2014 follow-on offering (which includes the partial exercise of the greenshoe on May 7, 2014) and private placement of common stock, the number of shares of common stock available for issuance under the Equity Incentive Plans increased to 1,237,711, inclusive of the 454,338 shares of restricted stock issued as provided above and 21,862 shares of restricted stock issued as a result of the stock portion of the dividend declared on December 19, 2013 and restricted stock attributed to dividends on restricted stock under the Director Deferred Fee Plan. The Company recognized stock-based compensation expense of approximately \$2.2 million and approximately \$1.1 million for the years ended December 31, 2014 and December 31, 2013, respectively, and approximately \$367 thousand for the period from May 15, 2012 (commencement of operations) through December 31, 2012. In addition, the Company had unamortized compensation expense of \$57 thousand for equity awards and approximately \$3.2 million for liability awards and \$423 thousand for equity awards and approximately \$3.2 million for liability awards at December 31, 2014 and December 31, 2013, respectively.

All restricted common shares granted, other than those whose issuance has been deferred pursuant to the Director Deferred Fee Plan, possess all incidents of ownership, including the right to receive dividends and distributions currently, and the right to vote. Dividend equivalent payments otherwise allocable to restricted common shares under the Deferred Compensation Plan are deemed to purchase additional phantom shares of the Company's common stock that are credited to each participant's deferral account. The award agreements include restrictions whereby the restricted shares cannot be sold, assigned, transferred, pledged, hypothecated or otherwise disposed of prior to the lapse of restrictions under the respective award agreement. The restrictions lapse on the unvested restricted shares awarded when vested, subject to the grantee's continuing to provide services to the Company as of the vesting date. Unvested restricted shares and rights to dividends thereon are forfeited upon termination of the grantee.

**Note 12—Share-Based Payments (Continued)**

The following is a summary of restricted common stock vesting dates as of December 31, 2014 and December 31, 2013, including shares whose issuance has been deferred under the Director Deferred Fee Plan:

Vesting Date	December 31, 2014	December 31, 2013
	Shares Vesting	Shares Vesting
January 2014 . . . . .	—	7,685
March 2014 . . . . .	—	54,852
May 2014 . . . . .	—	18,707
June 2014 . . . . .	—	6,279
January 2015 . . . . .	12,745	7,685
March 2015 . . . . .	121,518	54,852
May 2015 . . . . .	18,708	18,707
June 2015 . . . . .	6,873	—
November 2015 . . . . .	1,334	—
January 2016 . . . . .	8,920	3,860
March 2016 . . . . .	121,518	54,852
January 2017 . . . . .	5,060	—
March 2017 . . . . .	66,667	—
	<u>363,343</u>	<u>227,479</u>

The following table presents information with respect to the Company's restricted stock for the year ended December 31, 2014 including shares whose issuance has been deferred under the Director Deferred Fee Plan:

	Shares of Restricted Stock	Weighted Average Grant Date Fair Value(1)
Outstanding at beginning of period . . . . .	252,517	\$20.34
Granted . . . . .	223,683	16.39
Cancelled/forfeited . . . . .	—	—
Outstanding at end of year . . . . .	<u>476,200</u>	<u>\$18.49</u>
Unvested at end of year . . . . .	<u>363,343</u>	<u>\$17.98</u>

- (1) The grant date fair value of restricted stock awards is based on the closing market price of the Company's common stock at the grant date.
- (2) Included in Granted are restricted stock attributed to dividends on restricted stock under the Director Deferred Fee Plan of 905 shares.

**Note 12—Share-Based Payments (Continued)**

The following table presents information with respect to the Company's restricted stock for the year ended December 31, 2013 including shares whose issuance has been deferred under the Director Deferred Fee Plan:

	Shares of Restricted Stock	Weighted Average Grant Date Fair Value(1)
Outstanding at beginning of period . . . . .	66,114	\$19.86
Granted(2) . . . . .	186,403	20.51
Cancelled/forfeited . . . . .	—	—
Outstanding at end of year . . . . .	<u>252,517</u>	<u>\$20.34</u>
Unvested at end of year . . . . .	<u>227,479</u>	<u>\$20.39</u>

- (1) The grant date fair value of restricted stock awards is based on the closing market price of the Company's common stock at the grant date.
- (2) Included in Granted are restricted stock attributed to the stock portion of the December 19, 2013 dividend on restricted stock of 19,565 shares and restricted stock attributed to dividends on restricted stock under the Director Deferred Fee Plan of 1,392 shares.

**Note 13—Stockholders' Equity**

On December 19, 2013, the Company declared a dividend of \$2.35 per common share payable in a combination of cash and stock. For stockholders who elected to receive the entire \$2.35 per share dividend in stock, each stockholder received 0.1590 shares in newly issued common stock for each common share that they held as of the dividend record date. For stockholders who elected to receive the dividend in cash, or did not make an election, each stockholder received \$0.9159 per share in cash and 0.0970 shares in newly issued common stock for each common share that they held as of the dividend record date. The dividend was paid on January 28, 2014 to shareholders of record as of December 30, 2013. As a result of a portion of the dividend being paid in stock, common shares of 2,548,784 were issued by the Company.

On April 3, 2014, the Company entered into a binding agreement with a group of underwriters to sell an incremental 13.0 million shares of the Company's common stock which closed on April 9, 2014. The agreement provided the underwriters with the right to purchase an additional 1.95 million shares (15% of 13.0 million) during the succeeding thirty (30) days. The shares were offered to the market at a price of \$14.85 per share and the underwriters exercised a portion of their option and purchased an incremental 1.0 million shares on May 2, 2014, which closed on May 7, 2014. Net proceeds to the Company were approximately \$205.4 million after subtracting underwriting commissions and offering expenses of approximately \$2.9 million. On April 3, 2014, the Company also entered into an agreement to sell 650,000 shares of the Company's common stock, for \$14.85 per share to its Manager in a private placement for an aggregate offering price of approximately \$9.7 million, which closed on April 9, 2014.

As a result of the April 3, 2014 follow-on public offering and private placement, the exercise price of each of the outstanding warrants was reduced from \$17.59 to \$16.70.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 13—Stockholders' Equity (Continued)**

On July 31, 2014, the Board of Directors of the Company authorized the repurchase of up to 2,050,000 shares of its common stock through December 31, 2015. Purchase made pursuant to the program will be made in the open market, in privately negotiated transactions, or pursuant to any trading plan that may be adopted in accordance with Rules 10b5-1 and 10b-18 of the Securities and Exchange Commission. The authorization does not obligate the Company to acquire any particular amount of common shares and the program may be suspended or discontinued at the Company's discretion without prior notice. The timing, manner, price and amount of any repurchases will be determined by the Company in its discretion and will be subject to economic and market conditions, stock price, applicable legal requirements and other factors. The Company has not yet entered into definitive agreements to utilize the authorization and, accordingly, has not repurchased any shares of common stock pursuant to the authorization as of December 31, 2014.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 14—Net Income (Loss) per Common Share**

The table below presents basic and diluted net income (loss) per share of common stock using the two-class method for the years ended December 31, 2014 and December 31, 2013 and for the period from May 15, 2012 (commencement of operations) through December 31, 2012 (dollars, other than shares and per share amounts, in thousands):

	<u>For the Year Ended December 31, 2014</u>	<u>For the Year Ended December 31, 2013</u>	<u>For the Period from May 15, 2012 (commencement of operations) through December 31, 2012</u>
<i>Numerator:</i>			
Net income (loss) attributable to common stockholders and participating securities for basic and diluted earnings per share . . . . .	\$ 100,713	\$ (27,855)	\$ 57,277
Less:			
Dividends and undistributed earnings allocated to participating securities . . . . .	<u>944</u>	<u>961</u>	<u>234</u>
Net income (loss) allocable to common stockholders—basic and diluted . . . . .	<u>\$ 99,769</u>	<u>\$ (28,816)</u>	<u>\$ 57,043</u>
<i>Denominator:</i>			
Weighted average common shares outstanding for basic earnings per share . . . . .	<u>37,337,460</u>	<u>24,185,037</u>	<u>15,654,453</u>
Weighted average diluted shares outstanding (stock awards) . . . . .	—	—	9,045
Weighted average diluted shares outstanding (warrants) . . . . .	<u>—</u>	<u>—</u>	<u>55,735</u>
Weighted average common shares outstanding for diluted earnings per share . . . . .	<u>37,337,460</u>	<u>24,185,037</u>	<u>15,719,233</u>
Basic earnings per common share . . . . .	<u>\$ 2.67</u>	<u>\$ (1.19)</u>	<u>\$ 3.64</u>
Diluted earnings per common share . . . . .	<u>\$ 2.67</u>	<u>\$ (1.19)</u>	<u>\$ 3.63</u>

The following potential common shares, which are securities or other contracts that may entitle its holder to obtain common shares, were excluded from diluted earnings per share for the year ended December 31, 2013 as the Company had a net loss for the period and their inclusion would have been anti-dilutive: 67,257 related to warrants and 13,434 related to stock awards.

**Western Asset Mortgage Capital Corporation and Subsidiaries**  
**Notes to Consolidated Financial Statements (Continued)**  
(in thousands—except share and per share data)

**Note 15—Income Taxes**

Based on the Company's analysis of any potential uncertain income tax positions, the Company concluded that it does not have any uncertain tax positions that meet the recognition or measurement criteria as of December 31, 2014. The Company files U.S. federal and state income tax returns. As of December 31, 2014, tax returns filed by the Company for 2013 and 2012 are open for examination pursuant to relevant statutes of limitation. In the event that the Company incurs income tax related interest and penalties, the Company's policy is to classify them as a component of its provision for income taxes.

Subject to the limitation under the REIT asset test rules, the Company is permitted to own up to 100% of the stock of one or more TRS. Currently, the Company owns one TRS that is taxable as a corporation and is subject to federal, state and local income tax on its net income at the applicable corporate rates. The TRS, which was formed in Delaware on July 28, 2014, is a limited liability company and a wholly-owned subsidiary of the Company. For the year ended December 31, 2014, the TRS had a cumulative taxable loss. As there can be no certainty that the TRS will have taxable income in the future, no tax benefit was included in these consolidated financial statements.

**Note 16—Contingencies**

From time to time, the Company may become involved in various claims and legal actions arising in the ordinary course of business. Management is not aware of any material contingencies at December 31, 2014.

(1) The Company identified an error relating to Basic and Diluted Net Loss per share amounts of \$1.14 for the three month period ended June 30, 2013, as previously reported in the June 30, 2013 Form 10-Q. The error understated Basic and Diluted Net Loss per share by \$0.02 per share. Management evaluated the impact of the error on the previously reported financial statements and concluded the impact was not material to the financial statements for the three month period ended June 30, 2013 taken as a whole. However, Management has elected to revise the per share amounts to correct for the impact of this error and the revised amounts of \$1.16 per share are reflected above.

Balance at end of period . . . . .	<u>\$7,220</u>	<u>\$—</u>	<u>\$—</u>

**ITEM 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.**

None.

**ITEM 9A. Controls and Procedures**

*(a) Evaluation of Disclosure Controls and Procedures*

We maintain disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the “Exchange Act”)) that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC’s rules and forms, and that such information is accumulated and communicated to our Chief Executive Officer and Chief Financial Officer as appropriate to allow timely decisions regarding required disclosure. In designing and evaluating the disclosure controls and procedures, we recognized that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and therefore we are required to apply judgment in evaluating the cost-benefit relationship of possible controls and procedures.

The Company’s Chief Executive Officer and Chief Financial Officer evaluated the effectiveness of the design and operation of our disclosure controls and procedures as of December 31, 2014. Based on that evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective at the reasonable assurance level.

*(b) Management’s Report on Internal Control over Financial Reporting*

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is defined in Rules 13a-15(f) and 15d-15(f) promulgated under the Exchange Act as a process designed by, or under the supervision of, the Company’s Chief Executive Officer and Chief Financial Officer and effected by the Company’s Board of Directors, management and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, and includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company’s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risks that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Management of the Company has assessed the effectiveness of the Company’s internal control over financial reporting as of December 31, 2014. In making its assessment of internal control over financial reporting, management used the criteria described in Internal Control—Integrated Framework (2013 framework) issued by the Committee of Sponsoring Organizations of the Treadway Commission, (“COSO”). Based on this evaluation, management concluded that the Company’s internal control over financial reporting was effective as of December 31, 2014 based on criteria in Internal Control—Integrated Framework issued by the COSO.

This annual report does not include an attestation report of the company’s registered public accounting firm due to a temporary exemption transition period established by rules of the Securities and Exchange Commission for emerging growth companies under the Jumpstart Our Business Startups Act of 2012 (the “JOBS Act”).

*(c) Changes in Internal Control over Financial Reporting*

There have been no changes in our internal control over financial reporting during the three months ended December 31, 2014, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

**ITEM 9B. Other Information**

None.

**ITEM 10. Directors, Executive Officers and Corporate Governance**

The information regarding the Company’s directors, executive officers and certain other matters required by Item 401 of Regulation S-K is incorporated herein by reference to the Company’s proxy statement relating to its annual meeting of stockholders to be held on or about June 4, 2015 (the “Proxy Statement”), to be filed with the SEC within 120 days after December 31, 2014.

The information regarding compliance with Section 16(a) of the Exchange Act required by Item 405 of Regulation S-K is incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

The information regarding the Company’s Code of Business Conduct and Ethics required by Item 406 of Regulation S-K is incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

The information regarding certain matters pertaining to the Company’s corporate governance required by Item 407(c)(3), (d)(4) and (d)(5) of Regulation S-K is incorporated by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

**ITEM 11. Executive Compensation.**

The information regarding executive compensation and other compensation related matters required by Items 402 and 407(e)(4) and (e)(5) of Regulation S-K is incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

**ITEM 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder**

The tables on equity compensation plan information and beneficial ownership of the Company required by Items 201(d) and 403 of Regulation S-K are incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

**ITEM 13. Certain Relationships and Related Transactions and Director Independence**

The information regarding transactions with related persons, promoters and certain control persons and director independence required by Items 404 and 407(a) of Regulation S-K is incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

**ITEM 14. Principal Accounting Fees and Services**

The information concerning principal accounting fees and services and the Audit Committee’s pre-approval policies and procedures required by Item 9(e) of Schedule 14A is incorporated herein by reference to the Proxy Statement to be filed with the SEC within 120 days after December 31, 2014.

**ITEM 15. Exhibits**

Documents filed as part of this report:

1) Financial Statements

## CERTIFICATIONS

I, Gavin L. James, certify that:

1. I have reviewed this annual report on Form 10-K of Western Asset Mortgage Capital Corporation;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have):
  - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, if any, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
  - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
  - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
  - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's Board of Directors (or persons performing the equivalent functions):
  - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
  - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
